FOREIGE BIBLE SOCIETY. ABD Since 1811 the British and Foreign Bible Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burms. The first Auxiliary was estab-lished in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, while the the Bangaiore Auxiliary in 1875, Burma Agency was founded in 1899. Bible or some portion of it is now to be had in over 100 different Indian languages and dialects and the circulation throughout India and Burma reached 1,273,788 issues in 1938. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Grants of English Scriptures are made to students who pass University examinations, as under:—

The New Testament and Psalms to Matriculates and the Bible to Graduates.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a Fluch smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Society—the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma:—

INDIAN SOCIETY OF ORIENTAL ART (Calcutta)— Patron: Marquess of Zetland, G.O.I.E.. Office: 11, Samavaya Mansions, Hogg Street, Calcutta.

INDIA SUNDAY SCHOOL UNION.—The India Sunday School Union is an interdenominational organisation having for its object the strengthening of religious and moral education in the Christian schools throughout the Indian Empire. It has five full time workers, both Indian and European. It was founded in Allahabad in 1876. Its General Committee is composed of representatives from the National Christian Council, from the Provincial Representative Councils and from local Sunday School Unions which are Auxiliaries of the I.S.J.U.

The headquarters of the Union are at Coonoor on the Nilgiri Hills, where besides the office and well-stocked book shop, there is the St. Andrew Teacher Training Institution. In this institution Summer Schools are held where a short but intensive course of study and training is offered to leaders in religious education from all parts of India.

Besides the activities at headquarters, the Union offers courses of lectures in any part of the country, delivered by members of its staff. A Quarterly Journal is published in English, and Lesson Notes for teachers in English and several vernaculars. Text-books

on subjects connected with the work of Bible teaching are also published in various languages, and Scripture examinations are organised.

The officers of the Union are as follows :---

President: The Hon. Sir David Dovadass, Madras.

Vice-President: Prof. B. B. Malvea, Ph. D., Allahabad.

Treasurer: W. H. Warren, Madras.

General Secretary: Rev. L. Watts, Cooncor. The most recent statistics show that there are in India 18,322 Sunday Schools with 30,428 teachers, and 707,204 scholars.

ROYAL SOCIETY OF ARTS, INDIAN SECTION.— This Society was founded in 1754 "for the encouragement of Arts, Manufactures and Commerce," and devotes itself primarily to the application of science and art to practical purposes. The Society ranks as one of the three oldest learned societies in England, and numbered among its early members most of the famous Englishmen of the 18th century. During its long history it has been the source of many reforms and improvements in all branches of art and industry, and it is from its activities that most of the more specialised British societies have sprung.

The Society has from its earliest days extended its interests and membership to all parts of the British Empire, and in 1869 it founded an Indian Section, and a little later a Dominions and Colonies Section. The Indian Section is under the control of a Committee comprised largely of former Lieutenant-Governors of Provinces, and others who have held the highest Indian administrative posts. Under its auspices a series of important lectures on Indian subjects is given each year, which, with the other lectures delivered before the Society, are published in the weekly "Journal" and circulated to members of the Society all over the world. There are a large number of Fellows resident in India. Patron: H. M. the King; President: H. R. H. the Duke of Connaught; Chairman of Council: The Right Hon. Lord Amulree, P. O., G.B.E., K.O., LL.D.: Chairman, India and Burma Section Committee: Sir Reginald Glancy, K.O.S.I., K.O.I.E.; Secretary: K. W. Luckhurst, M.A.: Assistant Secretary and Secretary, India and Burma and Dominions and Colonies Sections: Frank R. Lewis, M.A., D. Phil; Society's House: 18, John Street, Adelphi, London, W.C. 2.

THE SAFETY FIRST ASSOCIATION OF INDIA.—
(Incorporated in 1932). Registered Office:
Electric House, Colaba Causeway, Bombay.

The Association is registered under Section 26 of the Indian Companies Act. The liability of its members is limited by guarantee to a contribution of Rs. 5. There are six classes of membership ranging from Rs. 5 per annum for Associate Members and Rs. 10 per annum for full Ordinary Members to a single payment of Rs. 1,000 for Supporting Life Member.

The aims, objects and activities include the promotion of safety teaching and safety measures for the prevention of accidents on roads, in factories, mines, workshops, schools and homes and the encouragement of co-operation between different sections of road-users and between employers and employed.

The maintenance of a continuous educational safety propaganda through the Press, Platform, the Wireless and the Association and the News' and monthly magazine "Safety News" and "Radiant Youth" as well as through other publications such as Industrial Safety Service Communiques, Games Lessons, "Stop Look Listen," Indian Highway Codes, periodical leaflets and posters combined with film exhibitions.

The holding of conferences, organisation Safety Weeks, and the promotion of legislation covering all phases of road and industrial accident prevention.

Bihar Provincial Branch .- Convener: M. L. Tiwary, Jamshedpur,

SERVANTS OF INDIA SOCIETY .- The Servants of India Society, founded by the late Hon. Mr. G. K. Gokhale in 1905, is a body of men who are

national missionaries for the service of India and to promote, by all constitutional means, the interests of the Indian people. Its present strength is 26 Ordinary members, 7 members under training, and 1 permanent assistant. The Society has its headquarters in Poema with branches at, Madras, Bombay, Allahabad and Nagpur and other centres of work at Mayanur, Mangalore and Calicut in the Madras Presidency: Shendurjana in C. P.; Lucknow and Moradabad in U.P.; Lahore in the Punjab and Cuttack in Orissa.

The Society's work is primarily political but as it believes in all round progress of the Indian people, it has always laid equal emphasis on social, economic, educational, labour and depressed class activities and has worked in these fields. The political work is done through the legislatures the non-official political organizations, deputations to foreign countries and propaganda.

In the field of social, economic and educational work, the Society's activities are equally varied. Some of its members are practically the founders of such institutions as the Poona Seva Sadan, Bombay and Madras Social Service Leagues, the U. P. Seva Samiti, the Bhil Seva Mandal catering for the needs and uplift of the aboriginal tribes in Gujerat. The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 girls and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, educational and welfare work for the mill workers in Bombay by starting Co-operative Societies, adult night and technical schools and conducting welfare centres. The Seva Samiti is an unique organization in Upper India doing service to the pilgrims going to religious places such as Hardwar and Benares, and working in times of epidemics. Its Boy Scouts organization is a well-knit body recognised both by the public and Government, Mr. Chitalia has started a rural centre at Amreli in Kathiawar. The Society has been conducting a model Depressed Class Mission in Mangalore and the Devadhar Malabar Reconstruction Trust activities in Malabar district. In the Co-operative movement the Society has done the pioneering work in the Bombay and Madras presi-dencies. During natural calamities such dencies. such as floods, famines and epidemics, the Society has done relief work in every part of India. By its work in the Moplah rebellion, the Society has become a household name in Malabar. During recent years several members of the Society have paid special attention to rural reconstruction, including rural education.

The Society conducts three papers.—The Servant of India, an English weekly of which Mr. S. G. Vaze is Editor, the Dayan Prakash, the oldest Marathi daily of which Mr. Limaye is the Editor and the Hitawad, a weekly. Mr. Parulekar conducts the All-India Trade Union Bulletin, and Mr. A. V. Patwardhan, the Sansthani Swaraj, a Marathi weekly for the the country on such allowances as the Society so Society has also published several pamphlets may be able to give. Its objects are to train on public questions of the day.

The question of the subjects of the Indian States has also engaged the attention of the Society and some of its members, particularly Messrs. A. V. Patwardhan, S. G. Vaze, and A. V. Thakkar are devoting a part of their energies for that work.

Mr. H. N. Kunzru, is the President, Mr. N. M. Joshi, the Vice-President and Mr. P. Kodand Joshi, the Secretary. Mesers. V. Venkatasubalya, Joshi, Kunzru and Dravid are senior members of the four branches.

The Society is a non-communal, non-sectarian body which does not recognise any caste distinctions.

SEVA SADAM.—The Seva Badan Society was started on the 11th of July 1908 by the latter Mr. B. M. Malabari and Mr. Dayaram Gidumal, It is the pioneer in than ladies society for training Indian sisters ministrant and serving (through them) the poor the sick and the distressed. To spread its Gospelfar and wide, the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi, Bombay. The Society maintains the following departments of work: (1) Home for the Homeless: (2) Ashrams (Training Homes); (3) Marathi Normal Classes with a primary School: (4) Home Education Classes; (5) Industrial Department including a workroom, Sewing. Cutting, Hoslery, Cooking and Pastry and machine and hand Embroidery are among the chief industries taught. Total number of women in the different classes is over 400. Secretary, Miss B. A. Engineer, M.A., LL.B., M.B.E. J.P.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA.—Office and Homes at King's Circle, Matunga.

The Objects of the Society are: To rescue children of all castes and creeds from the Streets of Bombay, to prevent begging or other improper use of poor children by adults, to pass such children on to existing charitable institutions and to provide for those otherwise unprovided for, with the support and assistance of the police, to prevent children so far as possible from appearing in Police Courts, to prevent the public and private wrongs of children and the corruption of their morals, to take action for the enforcement of the laws for the children and if necessary to suggest new laws or amendments of the existing laws, to promote education, to provide and maintain an organisation for those objects, to do all other lawful thing incidental or conductive to the attainments of the foregoing objects.

The Society is responsible for the pioneer work of training public opinion and regarding Western India National Liberal Association the children's Act of 1924.

A. House, Mount Road, Madras and the United Provinces Automobile Association, 32, Canning Road, Allahabad.

VESTERN INDIA NATIONAL LIERRAL ASSOCIATION—(Founded in 1919).—The Association was formed, in pursuance of clause (b) of Resolution XI of the First Session of the All-India Conference of the Moderate Party, with a view to do sustained work for the political progress and the moral and material welfare of the people; to give expression

of the Party on matters of public interest; and to inform and educate public opinion in this presidency in support of its views, policy and methods.

The objects of the Association are the attainment by constitutional means of full Dominion Status for India at the earliest possible date. For the promotion of these objects, the Association shall adopt constitutional methods of agitation and work and shall foster a spirit of broadminded liberalism based on principles of liberty, equality and fraternity among the different classes and communities of the people. For the fulfilment of these objects the Association shall carry on educative, and propagandist work by means of leafets, pamphlets and other publications, (a) representations to Government, (b) meetings or conferences, lectures and all such methods as may be deemed practicable and expedient to educate public opinion, and (c) for advancing the interests of the Liberal Party by organising and influencing elections to the legislatures, Central and Provincial, to Municipalities and District Local Boards.

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every two years.

President: Sir Chimanlal H. Setalvad, K.O.I.E., LL.D.; Vice-President: Sir Cowasji Jehangir, K.C.I.E., M.L.A.; Hon. Secretaries: Mr. Kazi Kabiruddin, Mr. J. R. B. Jeejeebhoy, Mr. D. G. Dalvi and Mr. A. D. Shroff.

Assistant Secretary: Mr. V. R. Bhende.

Office: -107, Esplanade Road, Fort, Bombay.

WOMEN'S INDIAN ASSOCIATION ("SESHADRI," MYLAPORE, MADRAS).—This Association was started in Madras, in July 1917, with aims of service.

Aims and Objects:—To present to women their responsibilities as daughters of India. To secure for every girl and boy the right of Education through schemes of Compulsory Primary Education, including the teaching of religion. To secure the abolition of childmarriage and other Social evils. To secure for women the vote for Municipal and Legislative Councils on the same terms as it is or may be granted to men. To secure adequate representation of women on Municipalities, Taluk and Local Boards, Legislative Councils and Assemblies. To secure for women the right to vote. To establish equality of rights and opportunities between men and women. To help women to realise that the future of India lies largely in their hands; for as wives and mothers they have the task of training, guiding and forming the character of the future rulers of India. To band women into groups for the purpose of self-development and education and for the definite service of others.

It has 48 branches and over 4,000 members. Each branch is autonomous and works according to the needs of the locality.

The Association grants scholarships to girls, interests women in maternity and child-maless work in the unlift of the depressed

class and in other social and welfare activities for the general betterment of Indian society; has worked successfully for securing Franchise for women in India, (see pages 93 and 94 of the Simon Report, Vol. II) and compulsory education for girls and also actually helped in the passage of Child-Marriage Restraint Act in the Assembly and the Acts for the Suppression of Traffic in women and children and the abolition of the Devadasi system, in the local legislature. Holds regular meetings of women to educate them as to their duties as wives, mothers and citizens, publishes a monthly magazine titled Stri-Dharma, now edited by Dr. (Mrs.) S. Muthulakshmi Reddi for carrying out of the above objects. Association is an All-India body. Its largest branch being in Bombay and its branches are spread throughout India and flourishing as far as Kashmir and Lashkar. It is found that women everywhere welcome the opportunities given for their self-development and self-expression. The Association is affiliated to all the important progressive women associations in India and throughout the world. It was the initiator of the All-India Women's Conference and the First All-Asian Women's Conference at Lahore. The Madras Seva Sadan and the Madras Children's Aid Society, the Montessori School owe their origin to the efforts of this Association. The Association have now opened a Rescue Home to facilitate the working of the Rescue Section of the Immoral Traffic Act, which have been enforced by Government. The Home was opened on 21st March 1934 by Lady Beatrice Stanley.

Young Men's Christian Association.— This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemispheres. The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men and boys.

The Young Men's Christian Association, though relatively new to India, is spreading rapidly. The 'local' Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a National Council which is responsible for the supervision and expansion of all forms of the Association work in India, Burms and Ceylon.

There are now over 60 Associations affiliated to the National Council and many other village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve at the local headquarters:—Allahabad; Alleppey; Rangalore; Bombay; Calcutta; Calicut; Coimbatore; Colombo ; Delhi; Galle; Hyderabad; Jubbulpore; Kandy; Karachi; Kunnamkulam; Kottayam; Lahore; Madras; Madura; Kagpur; Naini Tal; Ootacamund; Poona; Rangoon; Bisalpur; Secunderabad; Simla; Trivandrum; Wellington. The others use reasted or rent-free buildings.

local Association is carried on by numerous voluntary workers and Committees, assisted by 85 specially trained full-time Secretaries. A feature of the Y.M. C.A. in India is the international character of its Secretariat. It is made up of 7 Americans, 2 Canadians, 5 Englishmen, 3 Scotsmen, 1 Swiss, 1 Swedish, 4 Anglo-Indians, 1 Dane, 2 Australians, 1 Burman and 58 Indians and Ceylonese.

The work of the National Council (excluding that of the 50 local Y.M.O.As.) called for a Budget of Rs. 1,25,662 in 1933. Of this sum Rs. 28,790 had to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are :-

The Marquess of Linlithgow, K.T., P.C., O.B.E., D.L., T.D., Viceroy Patron:-His Excellency The Most Hon. G.M.S.I., G.M.I.E., O.B.E., D.L., and Governor-General of India.

President of the National Council :- Dr. S. K. Datta, Forman Christian College, Lahore.

and Ceylon-J. S. Aiman, 5, Russel Street, Calcutta.

The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Rebsch Street, and Rey-nolds Road. The General Secretary is Mr. Joseph Callan, In connection with each branch there is a well-managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting eight centres, serving mill workers, Municipal menial employees, Port Trust and Railway employees. A programme of education, lectures, physical culture, play and general uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are manced by the Municipality.

Young Women's Christian Association of India, Burma and Ceylon.—This Associa-tion founded in the year 1875 was organised nationally in 1896.

The aim of the Association is to unite women and girls of Indis, Burma and Ceylon in fellow-ship and mutual service for their spiritual, is the leflet "Everymember" which is issued intellectual, social and physical development. each month and The Association exists for Indian, Anglo-Indian the Association.

The work of the National Council and of the and European girls and women. There are cal Association is carried on by numerous members in the following branches: General 46, Schoolgirl 29, Girl Guide Companies 35, Blue Bird Flocks 19 and 25 Y. W. C. A. Fellowship Groups. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes, Bible Study and devotional meetings, and meetings for social intercourse. Hostels, some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at present, owns 21, including 8 Holiday Homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation, though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday Homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to Holiday Homes Summer Conferences are held annually at Anandagiri, the Conference estate owned by the Association, in Ootacamund. Special Girls' Camps are arranged from time to time in many centres.

Traveller's aid work is done in the large National General Secretary of India, Burma ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs Employment Bureaux through the agency of which many girls find positions. The commercial schools train girls for office and business life. These larger Associations are manned by trained Secretaries, some of whom come from Great Britain, America, Australia, New Zealand and Canada. Though the majority of staff members are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year.

> The Association, which is affiliated to the World's Young Women's Christian Association is international and interdenominational. is Active membership is open to all who declare their faith in our Lord Jesus Christ and desire to serve others in His spirit of love, and Associate membership is open to any girl or woman, regardless of what her religion may be, who wishes to join the world-wide fellowship of the Y. W. C. A. and declare her sympathy with its purpose, and to share in its activities.

The Patroness of the Association is H.E. The Marchioness of Linlithgow.

Copies of the Annual Report and other printed matter can be obtained from the National Office which is at 134, Corporation Street, each month and sent to members and friends of

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are '-

- (1) To facilitate Intercommunication and co-operation between women of any nationality who are members of the universities of the United Kingdom, resident in India.
- To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the British Federa-tion of University Women, and otherwise as may seem expedient.
- (3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates: but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has two branches. The addresses of the Honorary Secretaries are as follows :-

Hony. Local Sccretaries.

Bombay

Mrs. M. Radcliffe Genge, Goul More, Bandra Hill, Bandra, Bombay.

Punjab

Mrs. Skemp, Race Course Road, Lahore.

The Deihi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Fcod Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special Pedder Road, Cumballa Hill, Bombay.

sub-committee, organized public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of Women's Employment Bureau in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United I ing-dom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

Federation of University Women in India.

The Federation of University Women in India unites various Associations of University Women throughout the country, its object being to promote friendship and understanding among University Women of all races resident in India and to further their common interests. It is affiliated to the International Federation of University Women which has a membership of over 60,000, representing thirty-three nations and which seeks by scholarships, exchange of teachers, group discussions and conferences to unite in common action and understanding the University women of the world.

The Federation in India is controlled by a Central Committee at present (1938) located in Bombay. It has branches in Bombay, Kodaikanal and Lahore, while women, eligible for membership, resident in places where no branch exists can be enrolled as "Scattered Members."

Office Bearers (1938):--

President .- Mrs. McKenzie, M.A., J.P., Wilson College, Chowpatty, Bombay.

Hon, Treasurer,-Mrs. Platts, M.Sc., Y.M.C.A., Wodehouse Road, Bombay.

Hon, General Secretary .- Mrs. A. J. Moore, 31.

ASSOCIATION OF COLUMBIA UNIVERSITY ALUMNI IN INDIA.—This is an organization conceived to unite for service and fellowship all Columbia alumni who may be resident in India. It was founded in 1931, and is a constituent member of the Alumni Federation of Columbia University, New York, U.S.A. There are more than fifty such Columbia Associations including one in London, Paris, Madrid and Berlin. The India Association has its Headquarters in Bombay.

President of the Association: Dr. Jal Dastur C. Pavry, M.A., Ph.D., Pedder Road, Malabar Hill, Bombay.

- SOERABAJA, JAVA: President: J. H. Ziesel. Honorary Secretary: B. J. De Bruyne van den Boschiaan 62. Thursday at 8-0 p.m. Simpang Club.
- Solo, Java: President: W. A. van der Noordaa. Honorary Secretary: J. P. Bakker, c/o Baros Tampir, Bojolali, Tuesday at 8-30 p.m., Societeit De Harmonie.

Church Organisation in India.

ANGLICAN.

Down to March 1st, 1930, the Church of England in India (and Ceylon), though possessing its own bishops and Metropolitan, was in the eyes of the law an integral part of the Church of England, and subject to the general supervision of the Archbishop of Canterbury. By the Indian Church Act and the Indian Church Measure passed by Parliament in 1927 this legal connection was severed, and on March 1st, 1930, for the fixing of which date provision was made by the Indian Church Measure, the Church of England in India and in Ceylon, in future to be known as The Church of India, Burma and Ceylon, and, for short, The Church of India, became wholly responsible for the management of its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuty with its past and destroy its spiritual identity."

Anglican work in India dates from the first establishment of the East India Company in the 17th Century on the shores of India at Surat, Madras, and Bombay, where the servants of the Company were ministered to by a continuous succession of chaplains. The first chaplain was the Revd. Peter Rogers, Surat, 1612. The first church built was St. George's, Madras, in 1860, followed by Bombay Church, now St. Thomas' Cathedral, in 1716. In South India the work of Danish and German Lutheran missionaries was assisted by the English S.P.C.K. (Society for the Promotion of Christian Knowledge), but missionary work was not attempted by the Church itself till the beginning of the 19th Century.

Like all other branches of the Anglican Communion the Church of India is episcopal. The first bishopric was not, however, founded until 1814 when the see of Calcutta was set up, the first bishop being Thomas Fanshaw Middleton. His jurisdiction at first included not only British India but the British settlements in Australia, the Straits, the Cape and St. Helena's. At the same time India was divided into three Archdeaconries, and two of these, Madras in 1835 and Bombay in 1837, were later erected into bishoprics. The three dioceses thus formed have been repeatedly subdivided, until in 1930 there were fourteen dioceses, the dates of their creation being as follows: Calcutta 1814; Madras 1835; Bombay 1837; Colombo 1845; Lahore 1877; Rangoon 1877; Travancore 1879; Chota Nagpur 1899; Lucknow 1893; Tinnevelly 1896; Nagpur 1903; Dornakal 1912; Assam 1915; Nasik 1929. Plans are in hand for the formation of two more dioceses out of Lucknow and Calcutta. Rangoon, Lahore and Dornakal hope also to be divided shortly. There are assistant bishops in the dioceses of Lahore, Calcutta and Dornakal.

Rules for the government of the Church are contained in its "Constitution, Canons and Rules" adopted by its General Council in

session at Calcutta in 1930. All clergy before receiving a license from their bishop make in addition to an oath of canonical obedience to their bishop, a declaration accepting the Constitution, Canons and Rules, as well as a declaration concerning the faith and formularies of the Church, Lay members of the General and Diocesan Councils also make declarations of accept and acceptance. The government of the Church is through these councils, the General Council being for the whole ecclesiastical province of India, Burma and Ceylon. Its membership consists of the bishops of the province, and houses of elergy and latty elected by the diocesan councils. The Diocesan Councils consist of the Bishop of the Diocese and all its clergy, together with lay representatives elected by the parishes. To exercise a vote in the election of lay representatives parishioners must be adult communicant members of the Church. It is open to a diocese to add to these qualifications that of having contributed some specified amount to the expenses of the Church. In addition to these councils every parish has a Church committee or council with a recognized constitution and these are in many areas organised into district Church councils, particularly where Indian parishes are numerous. Again in addition to these councils the bishops of the province meet in Synod, with clerical and four lay assessors if a matter of faith or order is being dealt with, and the bishop of a diocese can at any time hold a Synod of his clergy. Determinations on mat-ters of faith and order are made only by the House of Bishops of the General Council and cannot be made subjects of disciplinary action unless adopted in the form of a canon by the whole Council.

The additional title of Metropolitan was given to the Bishop of Calcutta when the sees of Madras and Bombay were formed. It is an ancient title similar to archbishop and indicates that its holder has furisdiction over the other bishops of the province. Before consecration a diocessan bishop takes an oath of canonical obddience to the Metropolitan. Under the Constitution of the church bishops are elected by the diocese, subject to confirmation by the bishops of the province. In the Constitution, Canons and Rules, the Constitution consists of Declarations laying down the position of the Church of India as a part of the One, Holy, Catholic and Apostolic Church; the Canons lay down principles of government and organisation; the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Bules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Carrying out of the Rules arrange in detail for the Rules ar

episcopal supervision of its establishment of Indian clergy frequently preach or celebrate chaplains. For the other seven bishoprics, and for European congregations, and in a few for any others, set up, Government is in no way responsible.

The Ecclesiastical establishment of the Government of India is an inheritance from the East India Company. That Company from the first provided chapiains for its servants. The chaplains of the present establishment are maintained for ministration to the Government's British born servants, civil and military. They are chosen by the Indian Chaplaincies Board sitting in London, are appointed by the Secretary of State, are posted to Dioceses by the Governor-General in consultation with the Metropolitan, and within their Dioceses are posted to stations by the Provincial Governor on the recommendation of the diocesan bishop. Their pay and allowances are wholly met by Government. In spiritual matters they are subject to the supervision and jurisdiction of their bishop, and while Government servants civil and military are their primary charge, they are the parish priests of the chaplaincies to which they are appointed and are responsible for the care of all members of the church in their parish except in so far as Indian Members of the Church are cared for by missionaries or Indian clergy. Besides providing chaplains the Government of India, again following the practice of the East India Company, has provided or assisted in the provision of churches and their maintenance, and also of cemeteries. Where numbers do not warrant the provision of an Establishment chaplain Government has assisted in the provision of clergy by grants-in-aid, and when from time to time the number of Establishment chaplains has been reduced special grants-in-aid have been granted. The Establishment and all grants-in-aid are subject to revision and are in fact revised from time to time.

(The Ecclesiastical establishment includes besides Anglican chaplains, Church of Scotland, Free Church, and Roman Catholic chaplains, for ministrations to members of those communions; and churches and grants-in-aid are provided or given on the same principles as for Anglicans.)

The special interests of those parishioners whose domicile is England in the continued use, should they so desire, of the services of the English Prayer Book, which the Church of India is now free to alter at its discretion, are safeguarded by certain of the canons, and these interests together with other matters concerning the undertakings and relation of the Government of India to its chaplains and the Church are provided for by a set of Statutory Rules drawn up under the Indian Church Act. Mem-bers of the Church of England or any of the branches of the Anglican Communion are, while resident in India, full members of the Church of India, and are a most important part of the Indian Church, their numbers still in some places exceeding those of Indian members, and some stations being still exclusively European, although in the Church as a whole the number

instances are in permanent charge of European parishes. The Indian laity though usually preferring services in their own languages are everywhere free to attend English churches. and to be enrolled, if they wish, as parishioners.

The education of European children, and more particularly the children of the Domiciled and Anglo-Indian community, has from early days been a concern of the Church. In addition to day-schools it has established over 70 boarding schools for boys and girls, many of them in hill ing schools for boys and girls, many of them in hill stations. The provincial Governments assist these schools with grants-in-aid both for building and current expenditure, just as they do all other schools, according to the rules of the education codes. The schools are inspected by Government inspectors. Indian boys and girls are admitted to these schools, but the number that may be taken is limited to a percentage fixed by the local Government. The Archbishop of Contentions of Contentions and schools are supported to the schools of Contentions of the schools of Contentions of the schools of the sc of Canterbury has recently issued in England an appeal for £250,000 for the endowment of these schools. Indianisation of Government services, especially of the railways, customs and post and telegraph departments has severely hit the Domiciled and Anglo-Indian community, and the ability of parents to pay fees is steadily decreasing. Hence the urgent need for increased endowments. The existing endowments of all the schools yield an income of less than £1 per child per annum.

(The Church of India is not the only community responsible for European education in India. The Roman Catholics, the Church of Scotland and the various free churches previde schools for their children, and receive similar assistance from Government.)

The Government of India Act of 1935, section 83, provides for the continuance of government grants to European schools at a total figure in each province not less than the average figure for the ten years preceding 1933, unless the whole grant of a government to education is reduced, when the grant to European education may be reduced in proportion. And, as a result of the recommendations of a sub-committee of the Round Table Conference, provincial boards. For Anglo-Indian and European Education have been set up, and also an Inter-Provincial Board, to consider and advise Governments on matters connected with the schools.

Missions.

In Malabar, on the south-west coast of India. there have been Christians certainly from the 6th century, probably from the 4th century and possibly from the 1st century A.D. They are called "Syrian" Christians owing to their connection with the Church in Syria. They do not appear to have attempted to spread the Christian faith in India. The Portuguese may therefore be regarded as the first missionaries in India, and from their arrival at Goa the Franciscans and Dominicans who accompanied Franciscans and Dominicans who accompanied their fleets in large numbers threw themselves of Indian members greatly exceeds that of with great activity into the work of evangelism. Suropeans, European clergy numbered (in The formation of the Society of Jesus led to one 1986) 414 and Indian clergy 719. There of its first members the famous St. Francis are no racial distinctions whatever in the Church; Kavier being sent to Goa, where he arrived

in 1541. Under his leadership the preaching of Christianity was carried on with great earnestness. The missionary work of the Roman Catholic Church thus begun has been continued, and at the present day the number of Indian members of that Church is given as 2,113,659 (Census 1931), to which may be added 654,939 Syrian Christians attached to the Roman Church. The number of independent Syrian Christians (Census 1981) is given as 525,607.

Protestant missions did not begin till the 18th century, and as missionaries were not allowed to establish themselves in the Company's territories, they worked from Danish territory and in Indian States. These missionaries were Lutherans, but as stated above, were in the latter part of the 18th Century assisted with funds from England. Famous men among them were Ziegenbaig, Kiernander, Schuitze and Christian Friedrick Schwarz. By the end of the 18th Century it is believed that there were in South India about 80,000 Lutheran converts. In 1800 the famous Baptist trio, Carey, Marshman and Ward established themselves at Seratzore in Bengal (Carey had come to India in 1793). Men of humble origin and education, one was a cobbler, one a ragged-school teacher, and one a printer, they displayed great ability and enterprise, and threw themselves not only into evangelism but into the scientific study of India, its languages and culture, and its flora and fauna. Books and translations poured from their printing press. Carey was made professor of Sanscrit in Lord Wellesley's College for the training of civil and military officers.

The 19th Century saw a great increase in missionary effort of every sort. This was due to the opening of the Company's territories to or the opening of the Covernment of India Act of 1813, and it was only after that date that Anglican (Church of England) missionary Societies took up work in India, namely the Church Missionary Society and the Society for the Propagation of the Gospel, by sending as missionaries ordained clergy of the Church of England those hitterts subsidiated or sant by the Hingland, those hitherto subsidised or sent by the S.P.C.K. (see above) being Lutherans. The first missionaries to arrive after the passing of the Act were American Congregationalists. London Missionary Society were also early in the field and Presbyterians from America and Scotland soon followed. In the course of the century India became covered by a network of missions, engaged not only in evangelism, but in educational work in schools and colleges, in medical work and in industries. Among famous names of missionary educationalists are those of Dr. Duff of Calcutta, and Dr. Wilson in Bombay. In the education of women missions may fairly claim to have taken the lead. The total number of missionary societies from Europe and America working in India is now over 150. For consulta-tion and common action there is a National Christian Council with headquarters at Nagpur, first organised in 1914, and in connection with this there are 10 Provincial Christian Councils, Membership of these councils is by election or appointment by local churches and mission councils.

same number of middle schools: 103 Teachers training institutions; 217 industrial schools, and very many primary schools; 250 hospitals and about the same number of dispensaries; 68 Leper institutions and 11 Tuberculosis Sanatoria, and 15 homes for the Blind or Deaf : 64 Agricultural Settlements; 31 Co-operative Societies; 40 printing presses; 36 miscellaneous industries. The Census of 1981 gives 3,002,558 as the total number of Protestant Christians in India, making the total number of Christians, including Roman Catholics, Romo-Syrians and Syrians (see above) 6,296,768; included in this total are 167,771 Europeans and 138,758 Anglo-Indians.

Reunion. Since the Great War there has been widespread interest in India in the subject of the reunion of the separated Christian bodies. In South India the movement for union was started in 1919 by a group of Indian clergy. This has led to the preparation of an elaborate scheme of union the parties to which are Anglicans, Methodists and the already united South Indian United Church which consists of Presbyterians and Congregationalists. Much time and thought have been given to the preparation of the scheme, the problem presented by the task of reconciling Anglican, Presbyterian, Wesleyan and Congreg-ationalist principles being of extreme difficulty.

The scheme is now practically complete and awaits acceptance or rejection by the bodies concerned. If the scheme is accepted the four southern dioceses of the Church of India, Madras, Dornakal, Tinnevelly and Travancore will be separated from the rest of the province and form part of the united Church, which is pledged to maintain episcopal government. The general principles of the scheme were approved by the Lambeth Conference (of Bishops of the Anglicau Communion) in 1930. At the present moment (1938) the Church of India has submitted the scheme to the Consultative Committee of that Conference drawing attention to points of detail altered or settled since 1930 and asking whether the scheme can still be considered acceptable.

The existence of a united church in South India consisting of Congregational and Presbyterian elements has been mentioned in the preceding paragraph. In north India there has been in existence for some years The United Church of India (North) consisting of similar elements. Since 1929 a further movement for a wider union in north India has been considered at a series of Round Table Conferences to which the Church of India has sent representatives. In south India, again, a movement has started for union between two sections of the Syrian Church (the Orthodox and the Mar Thoma Reformed) and the Anglican Church, and the Church of India has agreed to send delegates to the Kerala Council of Church Union responsible for this movement (Kerala is a general name for the area covered by the States of Travancore and Cochin and the district of British Malabar).

Anglican Missions

In addition to the two principal missionsry societies of the Church of England, the S.P.G. The Directory of the National Christian Council | Society for the Propagation of the Gospel in Foreign Parts) and the C.M.S. (Church Missionary shows that the missions connected with it have | Society already mentioned, whose missionaries | Society already mentioned | Society | Socie

Ordained, Laymen, Women, Total, C.M.S. .. 31 130 71 232 + 68married women, there are also certain smaller, but important missions, namely The Oxford Mission to Calcutta working in Calcutta among students and also at Barisal; the Cowley-Wantage-All Saints Mission, working in Poona and Bombay; the Dublin Mission at Hazaribagh, the Cambridge Mission at Delhi, the Cawnpore Brotherhood; the Scottish Episcopal Church Mission, at Chanda C.P.; the Bible Churchmen's Missionary Society (12 ordained missionaries in the Lucknow and Nagpur and Rangoon dioceses); the Christa Seva Sangha, Poona, 1927 and the Christa Prema Seva Sangha, Poona 1934; the Canadian Church Mission (4 ordained missionaries in the Lahore Diocese); the Church of England Zenana Diocese); the Church of England Zenana Missionary Society, in several dioceses; the Sisters of St. Margaret (East Grinstead) in the Colombo diocese; Sisters of St. Denys (Warminster) in the Chota Nagpur Diocese; Sisters of the Holy Family, Naini Tal; the Winchester Brotherhood, Mandalay, and the Sisters of the Church, Maymyo. The first two of these, and several of the others in the list, consist of communities of priests or sisters under religious munities of priests or sisters under religious vows. Members of the brotherhoods mentioned are in most cases not under life vows. The work and influence of these communities is a most important element in the life of the Church of India.

The Church of India has taken its full share in

Church, Cawnpore, and Trinity College, Candy: are well-known. A college at Trichinopoly has been amalgamated with the inter-denominational Madras Christian College, For the training of Indian and Anglo-Indian ordination candidates Bishops' College, Calcutta, serves the whole of India. In the various language areas are other colleges for the training of ordinands and lay church-workers through the medium of the local language. Among hospitals made famous by the work of the doctors in charge are those at Quetta (Sir Henry Holland), Bannu (the late Dr. Pennell) and St. Stephen's Delhi (for women). The C.M.S. High School at Shrinagar is distinguished among the many High Schools of the Church for the methods adopted to develop manliness and esprit de corps in the boys. Cawnpore in the north and Nazareth in the extreme south are well-known centres of industrial work and training. The Diocesan Press at Madras was built up into a very large and efficient institution by a retired O. M. S. Missionary. At Hubli, in the Bombay Diocese. S. P. G. missionaries have, since 1919, done extremely good work in charge of an Industrial Settlement (for the reformation and training of members of criminal tribes) committed to their care by Government.

Exact figures of the membership of the Church India are not obtainable. From figures, available there appear to be about three quarters of a million (750,000) of which about a lakh and a half (150,000) are European and Anglo-Indian; dioceses, with large numbers of Indian Christians educational, medical and industrial work in are Dornakal, Tinnevelly, Travancore, Lahore, India. Among colleges founded and managed Madras, Calcutta, Lucknow, and Chotta Nagpur. by its missionaries St. Stephen's, Delhi, St. The number of clergy, European and Indian, John's, Agra, St. Columba's, Hazaribagh, Christ has been given in an earlier paragraph.

THE ROMAN CATHOLIC CHURCH.

The Catholic community is composed of the following elements:—

- (1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.
- (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and un the west coast. Cevion. Bengal. etc.

and up the west coast, Ceylon, Bengal, etc.
(3) European immigrants at all times, including British troops.

- (4) Modern converts from Hinduism and Animism in recent mission centres.
- (5) Recent converts from the Jacobite community in Malabar, of which 3 Bishops, 71 priests and some 28,000 laity have been received into the Catholic Church.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation de propaganda fide, till by the middle of the 19th century the whole country was divided but among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended)

by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Under the Sacred Congregation of Extraordinary Ecclesiastical Affairs:—

The archbishopric of Gos and Damaun (having some extension into British territory) with suffragan bishoprics at Cochin and Mylapore (both in British territory).

and Mylapore (both in British territory).
Under the Sacred Congregation of Oriental
Churches:—

The archbishopric of Ernakulam, with suffragan bishoprics of Changanacherry, Kottayam and Trichur

The archbishopric of Trivandrum, with suffragan bishopric of Tiruvella.

Under the Sacred Congregation of Propaganda Fide:—

The archbishopric of Agra, with suffragan bishoprics of Allahabad and Ajmere and the Prefecture Apostolic of Indore.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Callout, Trichinopoly and Tuticorin, and the Missions of Ahmedabad and Karachi.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna and Shillong and the Prefecture Apostolic of Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Visasapatam, Nagpur, Beswada and Cuttack, the Prefecture Apostolic of Jubbulpore, and the Mission of Bellary. The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Colmbatore, Kumbakonam, Salem and Malacca.

The archbishopric of Delhi and Simia, with suffragan bishopric of Lahore and the Prefectures Apostolic of Kashmere and Multan.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar, Trivandrum and Vijavapuram.

The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number over 2,000 besides which there is a body of secular clergy mostly Indian, about 2,400, numbering and 9,000 nuns. The first work of the over clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Kavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high

schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions.

The total number under education in
1936 exceeded half a million. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Guierat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of the Society for the Propagation of the Faith and of the Holy Childhood. helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

Holy See 18 represented Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels, D.D., appointed in 1981.

THE CHURCH OF SCOTLAND.

dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated; Calcutta, 1914; Bombay, 1919; Madras, 1921. There are 17 chaplains on the Some of these are attached to the Scottish battalions in India, while the others minister to the civil population of the towns where they are stationed and to those living in the smaller outstations in their respective areas. In addithere are a tion to the regular establishment, number of ministers throughout India who are maintained by the various communities to whom they minister and by the Additional Clergy Societies in India; Missionaries of the Church also maintain regular services in English in many centres. There are three Presidency Senior Chaplains in charge of this branch of the Church work in Bengal, Bombay and Madras respectively.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open

The Chaplaincy work of the Church of Scotland, Madras. Educational work is still an important branch of the mission work of the Church, and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres, and the baptised Christian community now numbers over 30,000. Work commenced in Darjeeling in 1870 is now carried on the Eastern Himalayan district, and there 1870 is now carried on throughout the whole and there is Christian community there or 000. In the eight mission districts of cutta, the Eastern Himaleyar, Madras 15.000. Calcutta, Santal, Rajputana, Nagpur, Poona, and the Punjab there were at the end of 1938 over 70,000 baptised Indian Christians. with these missions connection of Foreign Missions Women's Association does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much for education in India. The Church in Bombay sent to Calcutta. He was the first to open has six representatives on the Governing body schools where English was made the medium of the Anglo-Scottlah Education Society, and tor instruction, and where religious teaching exercises pastoral supervision over the Bombay was given daily. Similar educational missions Scottlah Orphanage. The now well-known St. were soon afterwards started in Bombay and Andrew's Colonial Homes at Kalimpong, though

not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now over twenty cottages, and about There are now over twenty cottages, and about 700 children in residence. The Church has many schools in all parts of its field, and it has also made a large contribution to the work of higher education in India through five Christian Colleges. The Scottlah Church College. Calcutta, is well-known. The Madras Christian College, which has been rebuilt on a magnificent site at Tansboram and which has recently been the meeting place of the world Missionary Con-

ference, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, Histop College, Nagpur, and Murray College, Stalkot. The Church also carries on important medical work. There are nineteen Mission Hospitals at different centres, among which are four ex-cellently equipped and staffed Women's Hospitals in Madras, Nagpur, Aimer and Poons. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons: "The Church of Scotland, Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

BAPTIST SOCIETIES.

BETTAIN.—Formed in 1792, largely through the stations. Medical work connected with the efforts of Dr. Wm. Carcy, operates mainly in Bengal, Bibar and Orisse, the United Provinces, Printing Presses for both English and Vernathe Punjab and Ceylon. The Baptist Zenana cular work are conducted at Calciutta and Mission and the Bible Translation Society have Cuttaok. The Secretary of the Mission is the been united with this Society. The staff of Rev. D. Scott Wells; 44, Lower Circular the united Mission in India and Ceylon numbers Road, Calciutta. missionaries and 805 Indian and 197 Singhalese workers. Connected with the Society are 449 Indian and Singhalese Churches, 285 Primary Day Schools, 26 Middle and High Schools, and 1 Theological Training College. The Church membership at the close of 1987 stood at 26,921 and the Christian community at 68,708. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack, Patna and Delhi where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK.-Ranges from Primary School to Colleges. Serampore College With its Royal Charter granted by His Danish Majesty in 1827, and confirmed by the British Majesty in 1827, and confirmed by the Brush Government in the Treaty of Purchase of the Settlement of Serampore in 1845, was placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, in Arts and Theology. It was affiliated in 1857 to the newlyormed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theorem tion with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological qualified students of all Churches. Degrees to

In Arts and Science the College prepares for the Calcutta Examinations. Principal: Rev. G. H. C. Angus, M.A., B.D.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 10 purely English Baptist missionary en Churches connected with the Society, but the Society.

THE BAPTIST MISSIONARY SOCIETY OF GREAT | English services are carried on in many of the

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The total expenditure of the Society for 1987 amounted to £162,31; of which £68,748 was expended in India and Cevlon.

THE CANADIAN BAPTIST MISSION,-Was commenced in 1873, and is located in the Telugu Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 20 stations and 682 outstations with a staff of 101 missionaries including 8 qualified physicians, and 1,525 Indian workers, with Gospel preaching in 1,659 villages. Orgaaised Churches number 126, communicants 28,236 aised churches number 120, communicatia 28,230 and adherents 26,719 for the past year. Forty-six Churches are entirely self-supporting. In the Educational department are 558 village day schools, with 10,903 children, 12 boarding schools, 2 High schools, 2 Normal Training schools, a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils, and an Industrial school. There are 6 Hospitals, two large-scaling and Ornhange Willson Evens. leper-asylums and an Orphanage. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 65 per cent, the Christian community by 20 per cent, and schelars by 105 per cent. Indian Secretary is the Rev. J. B. Molaurin, Coosnada.

AMERICAN BAPTIST FOREIGN MISSION SO-AMERICAN BAPTIST FORRIGH MISSION SO-CHRY, Organized in 1814, has Missions in Burma began 1818; Assam 1836; Bengal and Orissa 1836; South India 1840. It owes its origin to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 32 main stations of the Mission in Burma, 11 in Assam, 10 in Bengal and Orissa, and 29 in South India, headden many outstations. All forms of besides many outstations. All forms of missionary enterprise come within the scope of All forms o

The great work of the Mission continues to The great work of the mission continues to be evangelistic, educational and medical, and the training of the indigenous pastors, preachers and Bible-Women, and extends to many races and languages. The most important result of its work in Burna, has been the practical transformation of the Karens and the Kachins whose languages has been reduced to writing by the Mission. The Chins of the Chin Hill Tracts are also progressing along these lines under the influence of the Mission. The work in Assam embraces 11 different languages. and large efforts are being made amongst the em-ployees of the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

In the year 1936 the field staff numbered 302 missionaries, 6,814 indigenous workers. There were 2,960 organised Churches of which 2,335 were self-supporting. Church members numbered 3,13,548. In the 2,353 Sunday Schools were enrolled 1,03,763 pupils. The Mission conducted 2,662 schools of all grades, Judson College at Rangoon and the Agricultural School at Pyinnana being among them, with 95,409 students enrolled. 13 hospitals and 34 dispensaries treated 11,188 inpatients and 1,02,297 outpatients. Christians of all communities among whom the Mission works, contributed over Rs. 6,42,654 for this religious and benevolent work during the year,

THE AMERICAN BAPTIST ASSAM MISSION was opened in 1836, and has 11 main stations staffed by about 53 missionaries. There are 854 native workers, 965 organized churches, 63,141 baptised members, 412 schools of all grades including 2 High, 2 Normal, 3 Bible and 10 station schools. 4 Hospitals and 5 Dispensaries treated 1,984 in-patients and 25,467 outpatients during the year. THE MISSION TO LEFERS—Founded in 1874, is an interdenominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children working in 20 countries but largely in India, Burma, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India and Burma, sième the Mission now has 35 Asylums of its own with upwards of 7,500 inmates and is adding or has some connection with work for lepers at 22 other places in India. Altogether in India and Burma over 10,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases both adults and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India and Burma but the bulk of the money expended by the Mission in India and Burma is received from Britain, although the provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which Lady Brabourne, Lady Marjorie Erskine, and Lady Hubback are Vice-Presidents.

Hon. Treasurer:—William McIntyre, Esq., c/o Macneill & Co., 2, Fairlie Place, Calcutta.

MISSOURI EVANGELICAL LUTHERAN ISDIA MISSION (M.E.L.I.M.). Is located in North Arcot (Ambur, Vaniyambadi, Pernambut), Salem (Krishnagiri), Tanjore (Tanjore, Negapatam, Annakadu), Trichinopoly (Golden Rock), Madura (Madura, Veilakulam, Puthupatti), Ramnad (Valsurampatti, Unipatti), Tinnevelly (Valioor, Vadakangulam) Districts, in Mysore (Kolar Gold Fields, Bangalore) and in Travancore (Nagercoil, Trivandrum, Parasala, Neyyattinkara, Nedumangad, Nilamail, Alleppey and Shertely).

There are 42 missionaries (of whom 5 are on furlough), 1 American teacher in charge of a school and boarding home for children of missionaries (in Kodalkanal), 2 male doctor (1 American, 1 Indian), 2 American Zenana workers, 1 American nurse, 1 American Female Educational worker, 3 training institutions for teachers, 1 for catechista, 1 theological seminary for training pastors, 3 high schools, 1 hospital with 20 beds.

STATISTICS, November 1, 1938: Souls, 17,810; baptized, 13,481; catechumens, 1738; adherents, 2591; native pastors, 7; evangelists, 17; catechists, 164; teachers belonging to the MEIM, 158; other teachers, 81; boarding houses, 10.

THE GENERAL SECRETARY:—The Rev. R. M. Zorn, Nagercoil, Travancore, South India.

THE DANISH MISSIONARY SOCIETY, established 1864 in South Arcot, working there and in North Arcot, on the Shervarol Hills, in Madras and in Orissa has a total staff of 359 Indian and 51 European workers, communicants, 5,136, Christian Community 7,714, one High School one Secondary school, one Bible School for Women, three Boarding Schools, three Industrial Schools, one hostel, 783 Elementary Schools, and two Hospitals; total schools 5,74.

President.—The Rev. C. Bindslev, Nellikuppam.

Treasurer.—The Rev. K. Heiberg, 38, Broadway, G. T., Madras.

THE SANTAL MISSION OF THE NORTHERN, CHURCHES (Gornerly known as the Indian Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Birthum, Murshidabad, Maida, Raishahl, Dinajpur and Goalpara. Work is principally among the Santals but also among Bengalis and the Mech people (Boro). Mission staff numbers 33 of whom 2 medical missionaries. Indian peators 31, other Indian workers 500, Christian community in organized congregations 21,441. 6 boarding schools with 900 pupils, 130 elementary schools with 2000 pupils, 1 industrial school with 400

pupils, 1 printing press, 1 orphanage with 30 orphans, 2 hospitals, 4 dispensaries, 1 leper colony with 300 lepers, 1 tea garden. Acting Secretary: Rev. R. Rosenlund, Dumka, Santal Parganas.

Methodist Church.

THE METHODIST MISSIONARY SOCIETY commenced work in India, in 1817. The Mission in India apart from Ceylon is organised into 7 Districts with their separate District Synods working under 2 Provincial Synods. In connection with these Synods there is a large English work with 22 ministers giving their whole time to Military and English work.

The Districts occupied include 148 Circuits in Bengal, Madras, Mysore, Bombay, Punjab, North West Frontier Provinces, Baluchistan, Central Provinces, United Provinces and Nizam's Dominions. The European staff numbers 218 with 73 Indian ministers and 1,002 Catechists. There are 413 Churches with a Christian community of 122,986 and 33,556 Communicants. There are a number of Circuits with their Churches thoroughly organised and self-supporting. Educational work comprises 3 Christian Colleges with 89 teachers and 1,763 students; 5 Theological Institutes with 42 teachers and 378 students; 11 High Schools with 236 teachers and 5,047 students, 6 Industrial Institutes with 25 teachers and 242 students, 7 Boarding Schools with 116 teachers and 1,648 scholars, 1,233 Elementary Schools with 2,312 teachers and 41,881 scholars.

Medical work is represented by 17 Medical Institutions with 3 European and 12 Indian doctors, 3,877 In-patients and 51,137 Outpatients.

THE METHODIST EPISCOPAL CHURCH originated in the United States of America as an outgrowth of the Wesleyan revival. Unlike the Methodists of Great Britain those in the United States retained the Episcopal form of Church of England resulted from their decision to elect bishops of their own and have them ordain ministers for their churches which were scattered over a wide territory and, being without an ordained ministry were clamouring for the Sacraments. The first bishops were Thomas Coke, an ordained delegyman of the Church of England, and Francis Asbury, a former lay preacher whom John Wesley had ordained and seat to the Colonies.

This Church began work in India at Bareilly and Lucknow in the United Provinces in 1856. Its baptised membership in India and Burma now totals about five hundred thousand in eleven Annual Conferences. From these countries the Church spread to Malaya, the Netherlands Indies and the Phillipine Islands, in the last named of which it has a membership of 110,000.

This Church is widely known for its extensive educational work for Indian and Angio-Indian youths, its association with "mass movements" or "group movements" into Christianity and its constitutions to Christian literature. The first bishop in India, the late Dr. James M. Robinson, was known as "the prophet of the mass movement." Wide territories in which movements of groups of people to Christian faith have been initiated have been transferred to other Churches. While these group movements have until recent years been confined to the depressed classes and aboriginal tribes converts from the higher castes and from Islam have been numerous since 1890.

The educational work includes four colleges, with participation in two others, twenty two high schools, more than a score of normal training and theological schools and over a thousand schools of other grades. The pupils in these schools exceed forty thousand.

Christian literature is produced in English, Urdu, Hindi, Bengali, Gujerati, Marathi, Telugu, Kanarese, Burmese and Chinese. The Lucknow Publishing House produces books and periodicals in English, Hindi, Urdu and Roman Urdu. Among the periodicals are The Indian Witness (a weekly), The Junior Methodist, and The Fellowship (monthlies), and Christian Education and the Upper Room (quarterlies), all in English and The Kaukab-i-Hind, a weekly in Roman Urdu.

While the Church in India is fully integrated in the wider Church and has not sought independence it exercises nearly complete autonomy in India. The governing body in India is the Central Conference, which meets quadrennially, its most recent session having been held at Hyderabad, Deccan, December 30th, 1938 to January 10th, 1939. Twenty four delegates are sent to the Quadrennial General Conference, which has hitherto met always in the United States of America.

The Church reports about 600 ordained Indian and Burmese ministers, 4000 unordained catchists, evangelists and teachers and two hundred foreign missionaries mostly from the United States, but representing also Great Britain Canada, Australia, Sweden, Norway, Denmark, and Switzerland. The Church is organized in 72 Districts. Most of the District Superintendents are Indians. Missionaries have no authority in the Church except such as comes with offices to which they are appointed. There is no separate mission organization.

At present there are three bishops. A fourth will be chosen shortly. The three bishops are not confined to separate dioceses but are general superintendents with co-ordinate authority throughout India and Burma. For purpose of administration, however, each is assigned quadrennially to an area consisting of three or more Annual Conferences. Bishops are elected for life but retire from active administration between their sixty fifth and seventieth years. The Bishops now administering are —The Rt. Rev. Brenton Thoburn Badley, M.A., LL.D., Delhi: The Bt. Rev. Jeshwant Rao Chitambar, M.A., LL.D., Jubbulpore: The Bt. Rev. Jarreli Waskom Pickett, M.A., L.D., Bombay.

The American Wesleyan Methodist Mission—Sanjan, Thana District Headquarters. Stations with Missionaries, Dandi-Maroli, via Nargole, and Sanjan District Thana. Vapi and Pardi District Surat. Six Missionaries on the

field, four main stations, one Boarding school, one industrial school, one Bible school, four village schools, one village farm project. Chairman of Field Committee.—Rev. Alton E. Liddick, Sanjan, Thana District.

The Methodist Protestant Mission began work in India in 1919, has a staff of four missionaries. The work is confined to Dhulia Taluka, with one Main station, Dhulia. There is one hostel for orphan children, evangelistic work and a hospital. Secretary: Dr. Edith Lacy, Dhulia, West Khandesh.

The Free Methodist Mission of North America-Established at Yeotmal, 1893, operates in Berar with as staff of 18 Missionaries and 40 Indian workers. Organised churches 5, 1 Theological School, Girls' Boarding School, 1 Anglo-Vernacular Middle School, 5 Elementary Schools, 1 Dispensary and 5 centres for Clinical and village health work.

Secretary: Mrs. F. J. Kline, Yeotmal, Berar.

THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker; and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 6 Territories, each under a Territorial Commander: and one smaller Command.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Territory, with Headquarters at Eastern Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory .- The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformative work was commenced). A special Settlement has also been opened in the Andamans during the last few years.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in one dispensary.

Other institutions include, Day and Boarding Schools, Agricultural Colonies Soldiers, and Civilians Hostel, Delhi.

Village centres at which the S. A. Works .. 2,109

Officers and Employees ... 618 Social Institutions

Territorial Headquarters-Ferozepur Road. Lahore, Punjab.

Territorial Commander-Colonel D. Pennick.

Western Territory.—The Western Territory comprises Bombay, Gujarat, Panch Mahala and the Maharastra.

Territorial Headquarters-The Salvation Army. Morland Road, Byculla, Bombay.

Commander-Lt.-Commissioner Territorial H. B. Colledge (Prakram Singh).

Chief Secretary-Brigadier Stephen J. Seager (Himmat Singh).

Corp, 287; Outposts 485; Societies 478 Social Institutions 16.

Besides the distinctly evangelistic operations there are established a large General Hospital-Emery Memorial, Anand—Ahmednagar Hospital, Kaira Dispensary and several Dispensaries; 220 Day Schools; 4 Boarding Schools; saries; 220 Day Schools; a Boarding Schools; a Home for Juvenile Criminals; Industrial and Rescue Home for Women; conditionally Released Prisoners' Home; the management of the Bombay Helpless Beggars' Camp; Weaving Schools, Factory for the making of Weaving, Warping and Beeling Machines, and a Land Colony having a population of about 265 Salvationists.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will and West Godavari Districts of the Northern ultimately become the property of the holders. Circars of the Madras Presidency.

There are the following agencies at work, viz., places in which work is systematically done, both evangelical and education and social:— 283 Corps and Outposts; 132 village primary schools; 1 Criminal Tribes Settlement; 2 institutions for the training of Officers; 1 Leper Colony at Bapatla with 265 inmates, 1 Hospital for women and children at Nidrobrulu, Guntur for women and children at Nidrobrulu, Guntur
District, a Women's Industrial Home in Madras;
a Boarding Schools for girls, and another
reat malaria epidemic has broken out, causing for hove of the Salvation Army.

Territorial Healquarters: -The Salvation Army, Broadway, Madras, G.P.O. Box 206.

Commander-Brigadier Maslin. Territorial Chief Secretary: Brigadier Edward Walker.

Southern India Territory.

The Southern India Territory is situated in the southern-most part of the Indian peninsuls, where for upward of half a century, our work has been carried on with truly blessed results.

Social degradation, as a result of following the deadly line of custom, has kept certain labouring communities on the border line of slavery for generations, but The Salvation Army has made a wonderful appeal to the spiritual instincts of these people, and thousands upon thousands have been won for Christ and His service since the commencement of our operations.

The Army's ministrations have been extended not only to the land labourers of the Malayalam country who live in scattered communities, but to the virile Tamils of the furtherest south who congregate in small village clusters where land is costly and dwelling space is congested. Besides ministering to their spiritual needs, The
Army undertakes responsibility in regard to
sanitary and educational arrangements as well as to the moral and economic life of the people.

A great forward movement is now being made in British South India. In this region five new Corps were established during the early months of 1938 and hundreds of villages where the Gospel message is never preached are waiting for us to come and set up the lamp of truth.

death to hundreads and generally undermining the health and vitality of the people. The Officers who are stationed in this malaria belt though exposed to infection and even falling victims to the disease, have brayely kept to their posts, having pledged themselves to stand by the people in their troubles. Eighteen Officers were immediately set aside to undergo a short period of training in methods of fighting malaria and to treat those who had been stricken with the malady.

Medical services have assumed great proportions in this Territory. More than 108,000 patients were treated in twelve months at the Catherine Booth Hospital and its eight branches. Opened last year, the Jones Memorial Hospital is a splendidly equipped building with a modern operating theatre and nursing wards for both men and women patients. A Christlike ministry is also in daily operation at our two leper Colonies.

Statistics: - Officers, 1,057; Employees, 288; Corps, 512; Outposts and Societies, 844: Schools, 213; Hospitals, 11; Institutions, 7.

Territorial Headquarters: -S. A. Kuravanconam, Trivandrum, Travancore State.

Territorial Commander: - Lieut.-Commissioner Chas. F. A. Mackenzie.

Chief Secretary :- Lieut.-Colonel A. J. Hedén.

Laws and the Administration of Justice.

The indigenous law of India is personal and in 1898. These Codes as amended from time to divisible with reference to the two great classes time are now in force. The years between 1870 of the population, Hindu and Mahomedan, and 1885 saw a great deal of legislative activity. Both systems claim divine origin and are in in British India, and important branches of the Both systems claim divine origin and are in extricably interwoven with religion, and each law, like Evidence, Contact, Tranfer of Passists in combination with a law based on perty, Trusts, Negotiable Instruments, etc., was to make their law public and territorial. Legislature applicable to the whole of Bertish and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu law and usage, and as In October, 1921, a committee was appelied. by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some Shastras and the Koran have been in some 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Standard of Standard Caste Disabilities Removal Act of 1856; and other Acts and Codes. To quote the Imperial of Sazetteer, "A certain number of the older English statutes and the English common law is everywhere personal to their native fellow subjects; but apart from these, and from

Codification.

Before the transfer of India to the Crown before the transfer of indus to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessity unwieldy, entangled and confusing," cedure have always been maintained in regar the first steps toward general codification were to criminal charges against European British taken in 1833, when a Commission was appointtaken in 1838, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta, but it was necessary in both ease that the was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal of India announced that they had decided the substantially the whole criminal of India announced that they had decided the substantially the shole that the question of india announced that they had decided the substantially the shole triminal of India announced that they had decided the state of the substantially the shole criminal of India announced that they had decided the substantial that the state of the substantial that was necessary in both cases that the substantial that the substantial that they had decided the substantial that the substantial that they had decided t which period it underwent revision from his lot tried for any offences by magnitrates of \$20 successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief peace, and by judges of the Sessions Courts, Justice of the Supreme Court of Calcutta, the Penal Code, which became law in 1880, magistrate or judge should himself be a Ears was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two settle the question of jurisdiction over European Codes. One of the most eminent hawvers who subjects in 1883 the Government Codes. law of British India is contained in these two Codes. One of the most eminent lawyers who subjects in such a way as to remove from the ever came to India, Bir James Stephen, said code at once and completely every judicly "The Indian penal code may be described as the criminal law of England freed from all distinctions." This decision, embodied in the chinicalities and superfluities, systematically libert Bill, aroused a storm of indignating arranged and modified in some few particulars which is still remembered. The controvern stances of British India. It is practically impossible to misunderstand the code." The controverny ended with the virtual; thought in the Code of Civil Procedure. The Indian by which is storm time to time been amended. By which is the Government. Act III of 1882 The Code of Civil Procedure was remodelied ed; cannot be said to have diminished in 1908 and the Code of Criminal Procedure privileges of European British subjects charged

law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments then, increasing importance will attach here authorities in India to whom the necessary law-giving functions have from time to time been india hope that the Committee will take it place as a permanent feature of the legislative machinery of the country.

European British Subjects.

with offences, and it left their position as exceptional as before. The general disqualifica- jurisdiction in any dispute between any two or tion of native judges and magistrates remains : but if a native of India be appointed to the post of district magistrate or sessions judge, his or district magnetistic or sessions judge, ms powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans..... Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered."

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in oriminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions
Committee the law on the subject was further
modified, and by the Criminal Law Amendment Act XII of 1928 in place of the old Chapter XXXIII (sections 443-468) the new Chapter XXXIII (sections 448-449) with certain supplementary provisions were substituted. has in some measure reduced the differences between the trials of Europeans and of Indians under the Code. Since 1836 no distinction of race have been recognised in the civil courts throughout India.

The Federal Court.

A Federal Court is, according to the Joint Parliamentary Committee's Report, a necessary element of any Federal Constitution. It is at once the guardian and interpreter of the Constitution, and arbiter of the disputes between the Federal Units. The Government of India Act 1985 accordingly provides (sections 200-218) that there shall be a Federal Court consisting of a Chief Justice of India and such number of other judges as His Majesty may deem necessary : but the number of pulsne judges shall not exceed six, unless and until an address is submitted by the Federal Legislature for an increase. Every judge of the Federal Court is to be appointed by His Majesty by warrant under the Royal Sign Manual. He shall hold office until he attains the age of 65 years, but is liable to be removed from office on the ground of misbeins-viour or of bodily or mental infirmity, provided that the Judicial Committee of the Privy Council on a reference reports that the judge ought on any such ground to be removed. The Federal Court shall be a Court of Record, and shall sit chief Justice may with the approval of the Gevernor-General from time to time to time appoint.

The Federal Court has exclusive original more of the following parties, that is to say, the Federation, any of the Provinces, or any of the Federated States, if and in so far as the dispute involves any question (of law or of fact) on which the existence or extent of a legal right depends. Certain restrictions are placed upon the Court's jurisdiction over disputes to which a state is a party. In the exercise of its original jurisdiction the Court can pronounce only a declaratory judgment. The Court is invested with appellate jurisdiction over any judgment decree or final order of a High Court in British India, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Government of India Act, or any Order in Council made thereunder. direct appeal in such a case lies to His Majesty in Council either with or without special leave. The Federal Legislature is empowered to enlarge the appellate jurisdiction of the Federal Court so as to extend to certain civil cases involving large stakes. An appeal also lies to the Federal Court from a High Court in a Federated State on the ground that a question of law has been wrongly decided concerning the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of the Instrument of Accession of the State or arising under Agreement made under Part VI of the Act in relation to the administration in

the State of a law of the Federal Legislature.

An appeal may be brought to His Majesty in Council from a decision of the Federal Court in its original jurisdiction in any dispute which concerns the interpretation of the Act, or of an Council Council State of the Act, or of an Council State of the Act, or of t Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of an Instrument of Accession, or under an agreement made under Part VI of the Act. An appeal may also be brought to the Privy Council where special leave is granted either by the Federal Court or the Privy Council. All authorities, civil and judicial, throughout the Federation are enjoined to act in aid of the Federal Court. All proceedings in the Federal Court shall be in the English language, and judgment must be pronounced in open court in accordance with the opinion of the majority of the judges.

The Federal Court is established and commenced to function from 1st October 1937. The Court in the first instance consists of a Chief Justice and two puisne judges. The Chief Justice receives a salary of Rs. 7,000, and each of the puisne judges Rs. 5,500 per month.

Sir Maurice Gwyer, K.C., is appointed to be the first Chief Justice of India, and Sir Shah Mahomed Sulaiman and Mr. M. B. Jayakar to be judges of the Federal Court.

The functions of the Federal Court are not to be affected in any way by the assumption of emergency powers by the Governor-General under section 45 of the Act in case of failure of the Constitutional machinery.

Righ Courts.

High Courts of Judicature were constituted by the Indian High Courts Act of 1881 for Bengal, Bombay and Madras, and later for the

United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patns and Rangoon as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, onethird are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held cer-tain Judicial Offices in India or lawyers qualified This fixed proportion of Barrister and Civilian judges has now been abolished by Government of India Act 1935. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Sindh, N. W. F. Province and the Central Provinces and Berar the principal legal tribunal is known as the Court of the Judicial Commissioner. Quite recently the Secretary of State for India has approved the proposal for the establishment of a High Court in the Central Provinces and Borar and Sindh; and a High Court has since January 1936 been established at Nagpur.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the arbandants. the subordinate courts. Returns are regularly sent to them at short intervals and the High courts are able, by examining the cturns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magissystem courts of session and courts of magni-trates. Every province, outside the Presi-dency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirms out sentences of usual are subject to commander the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilized in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails it accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disolaimed all Jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and sentenced by the High Courts in their original or appellate Criminal Jurisdictions. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofusal similar powers were conferred on the District Courts by the Insolvency Act of 1906. Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court; Vakils and Attorneys (Solicitors) of High Courts and Pleaders, Mukhtars and revenue agents.
Barristers and Advocates are admitted by each High Court to practise in it and its subordinate pourts; and they alone are admitted to practise on the original side of some of the Chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England.
The rule that a solicitor must instruct counsel
prevails only on the original side of the Bombay
and Calcutta High Courts. Pleaders practise deal with magisterial cases and benches of in the subordinate courts in accordance with Justices of the Peace or honorary magistrates rules framed by the High Courts. The Bar dispose of the less important cases.

various grades of practitioners, and under it each cate and a Junior Government Advocate; and of the High Courts maintains a roll of advo-Burma a Government Advocate, besides a cates entitled to practise within its jurisdiction. Secretary to the Local Legislative Council.

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India cipal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crewn, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Council and the Government Solicitor. There are Advocates-General appointed by the Crown and Government Solicitors for Bombay and Madras. Geyernment Solicitors for Bombay and Madras, in seven series—Calcutta, Madras, Bombay, and in Bombay there is attached to the under the authority of the Governor-Assistant Legal Remembrancer and an under the authority of the Governor-Assistant Legal Remembrancer, drawn from the General-in-Council. They contain cases de-Judicial Branch of the Indian Civil Service, termined by the High Court and by the Judicial The Government of Bengal consults the Bengal Council They contain cases de-Judicial Branch of the Indian Civil Service, termined by the High Court and by the Judicial The Government Solicitor, and has besides a great importance, and the Council of Law Lagal Remembrancer (a Civil Servant) and a Reporting for England and Wales show their Deputy Legal Remembrancer (a practising appreciation by printing the Indian Appeals barrister); the United Provinces are equipped in a separate volume, and have also compiled with a civilian Legal Remembrancer and pro- a digest of Indian Appeals covering the period descional lawyers as Government Advocate and 1874-1898. The other Provinces and States Assistant Government Advocate; the Punjab have series of reports issued under the authority as a Legal Remembrancer, Government Advo- either of the Judiciary or the State.

Under the Government of India Act 1935 it is Under the dovernment of mais At 1935 it proposed to appoint an Advocate-General for each of the more important provinces, and an Advocate-General of the Federal Court is also appointed, and he will be principal law-officer of the Federal Gavernment.

Sheriffs are attached to the High Courts of Calcusta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are now published in seven series Calcusta, Madras, Bombay,

Bengal Judicial Department.

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendlary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Province.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Hombay, which have its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 18th Act is a provincialised police, administered by the Local Government concerned and is not now subject to the general control of the Governor-General. The Police in minor provinces viz., Coorg, Delhi, Ajmor-Merwars, Andaman and Nicobar Islands, and Panth Piploda, and in other centrally administered areas is administered by the Chief Commissioner or the head of the administration concerned, subject to the general control and direction of the Central Government.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. the place where people come with their troubles. The force he commands is piaced at the disposal and their grievances against their neighbours of the District Magistrate for the enforcement or against a person or persons unknown. In of lawand the maintenance of order in the District. dealing with such callers, the Thanadar, who

But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police and Inspector-General of Police. Generally speaking, the D.S.P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C.I. D .- The Curzon Police mission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as Criminal Investigation Departments and work under Deputy Inspector-General. They collate information about crime, edit the Crime Gazette. take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific developments as the Finger Print Identification Bureaux. There is also a
Central Intelligence Bureau under the
Home Department of the Government of India which collects information from all provincial Criminal Investigation Departments and works for inter-provincial liaison. It has its branches at various centres throughout British India and at Quetta in Baluchistan. The Head of the Bureau known as the Director, Intelligence Rureau, also acts as Advisor to the Home Department of the Central Government in police matters,

Headquarters and Armed Police.—At the chief town of each District the D. 8. P. has his office and also his Headquarter Police Lines and parale ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accourtements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D. 8. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with "410 bore muskets. At most headquarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a molussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who

like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a prima facie case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is a police officer. Personal inspection and supervision are the common means for the District Superintendent of Police to know whether his subordinates are doing their work properly.

Out-Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana. The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion .-- A constable may aspire to become a Police Station Officer or higher officer. The directly recruited candidate who comes in through the Police Training School as a Thanadar is, it is understood, more often than not a graduate and may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship, and has chances of D.1.G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund. Members of the Police Force are eligible for the award of the King's Police Medal and the Indian Police Medal for long and meritorious services and for conspicuous acts of gallantry,

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court, The Criminal Procedure Code of India is superseded in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs. 200 fine summarily, i.e., without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue implications account the differences in the conditions of tance to statistical results as a test of the under which the police work; and, it may be portance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the which considerable stress was laid by the imperfectly the degree of success with which indian Police Commission, who referred to the the police carry out that important branch of evils likely to result from the prevalence of their duties, which consists in the prevention among subordinate officers of an impression of erime. These considerations have been that the advancement of an officer would ment of India. Subject to these observations, ratio of convictions, both to cases and by the figures below may be given as some persons arrested; and a low ratio of crime. The figures below may be given as some indication of the volume of work falling upon the objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking cognizable crime: parison even for larger areas without taking cognizable crime:-

added, they can at the best indicate only very imperiectly the degree of success with which

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penul Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

Since the introduction with effect from the 1st April 1937 of the Government of India Act, the administration of "Jails" is a provincial matter, and the power of legislation in respect of prison administration vests in the Provincial Governments, the Central Government exercising only concurrent legislative powers with the Provincial Governments in the matter of the transfer of prisoners and accused persons from one unit

to another.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India. extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been sceept-ed and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected ab initio as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jalls: in the first place, large central jails for convicts sentenced to more than one year's imprisonment; se-condly, district fails at the headquarters of districts; and, thirdly, subsidiary fails and "lock-ups" for under-trial prisoners and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superin-tendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes; in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour.

The Jails Committee.—The obivious advisability of proceeding along certain general lines of uniform application led lately to the appoint-ment of a Jalis' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty

upon the necessity of improving and increasing existing jail accommodation; of recruiting a better class of warders; of providing educa-tion for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders: the adoption of the English system of release on license in the case of adolescents; and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of sepa-rate accommodation for prisoners under trial; the institution of the star-class system; and the abolition of certain practices which are iiable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extramural employment on a large scale la some-times allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canai in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle iald down with regard to jail manufactures is that the work must be penal and industrial, that the work must be penal and mustime.

The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian tail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Fallure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment milited is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is indicted in relatively few cases, Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks.
The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torsure. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners for employment as convict Officers.

Juvenile Priseners.—As regards "youthful offenders"—i.s., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a stormatory should be a major strictly about the same of the second of the same of the second of the same of the second of the same o years. Stress was laid by the Committee reformatory school for a period of from three to

seven years, but not beyond the age of 18; amended mainly to prohibit the publication of discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline. These are but general principles which have been variously given effect to by various Provincial Governments.

The question of the treatment of "young adult" prisoners has in recent years received

much attention.

Children's Acts and Borstal Schools Acts for the special treatment of juvenile offenders have been passed by the legislature of Madras, Bombay, Bengal and the Central Provinces. The United Provinces Government are introducing a Borstal Bill. The Punjab Borstal Schools Act was

brought into force in 1932.

The Madras Children Act, passed in 1920, is the earliest and has been largely followed in the other provinces. It classifies as "children" boys and girls under the age of 14 and as "young persons" those between the ages of 14 and 16. It enacts that a child or young person convicted of any offence, may as an alternative to the usual punishments of fine, whipping or imprisonment be discharged after due admonition, committed to the care of a parent, guardian or relative, or of a person named by the court, or sent to an Industrial School set up or certified under the Act. It further enacts that no offender under the age of 16 may be sentenced to transportation, nor under 14 to imprisonment. Offenders between the ages of 14 and 16 may be sentenced to imprisonment in very special circumstances. Provision is made for the committal to an Industrial School or to the care of a suitable person of neglected, ill-treated or uncontrollable children under the age of 14. The Act empowers the Government of the Province to establish juvenile courts consisting of a stipendiary magistrate and one or two Honorary Magistrates who shall where possible be women and directs that, where such courts have not been established, young offenders shall be tried in a different room or at a different time from those at which the ordinary sittings are held.

The Bengal Act provides for the committal to an Industrial School of children under 14 found begging or destitute and of children living in immoral surroundings. It further provides for the punishment of cruelty to children, of causing and abetting the seduction or prostitution of girls under 16, and of accepting articles in pawn

from a child

The Bombay and Central Provinces Acts, which are practically indentical, go further and provide for the punishment of persons found drunk in a public place when in charge of a child under 7, or giving intoxicating liquor or drugs to a child under 14, or inciting a child to gamble. They also empower police officers to confiscate

tobacco in possession of children.

The Bombay Act has been extended throughout the province with satisfactory results and it will not now be necessary to send any children to prison except in very exceptional cases. The number of children under 16 admitted into the iails of the Presidency during 1936 was 6 (males 5 and female 1). There are 16 certified schools established under the Bombay Act and there are a number of other institutions which co-operate with different juvenile courts. A Children's Aid Society is in existence which offers active co-somment for less to operation. The Bombay Children Act has been should be prohibited.

names, addresses or other details of children or young persons involved in offences; to provide for a system of true probation as distinct from supervision; to empower the Chief Inspector of Certified Schools to release youthful offenders on licence and to raise the minimum term of detention in the Borstal School from 2 to 3 years.

These provisions of the Bombay Act which relate to youthful offenders, the maintenance and treatment of persons sent to certified schools or committed to the care of relatives or other fit persons and the establishment of industrial schools and juvenile courts were applied to the province of Sind in March 1936.

The operation of the Bengal Act which was passed in 1922 is at present confined to the town. passed in 1922 is at present confined to the town port and suburbs of Calcutta, Howrah and to certain portions of the District of the 24-Parganas, A Central Children Court has been established in Calcutta, which has jurisdiction over the whole area to which the Act has been extended.

The Governments of Madras, Puniab and the Central Provinces have also enacted Probation of Offenders Act which allow of the release of young offenders on parole under specially selected Probation Officers. Similar legislation is under contemplation in Bombay, U.P. and Assam.

The provisions of the Borstal Schools Act are

practically the same in the provinces where such

Acts have been enacted.

In provinces where there is no Borstal Schools Act juvenile offenders are sent to the reformatory schools established under the Reformatory Schools Act, or confined in juvenile or ordinary jails, but are not allowed to mix with adult prisoners. In the Punjab a Reclamation Department has been established the main function of which is the working of the Punjab Good Conduct Prisoners Probational Release Act, 1926. Prisoners Probational Release Act, 1926. Officers of the Department visit jalls for the selection of prisoners on probation release. The

selection of prisoners on probation release. In probationers are usually sent to special farms.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.-Transportation is an old punishment of the British Indian criminal law and a number of places were formerly appointed for the reception of Indian transported convicts.

The only penal settlement at the present time is Port Blair in the Andsman Islands.

Commission of Enquiry, 1918.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days

The Indeterminate Sentences .- The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jalis Commission report,

forth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home. The effect up to date has been to introduce a completely new outlook on life into the settlement, but it is still too soon to appreciate its potentialities.

Criminal Tribes .- The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and but it was not till 1926 that a definite decision is desirable to utilise both Government a was reached. It was then decided that hence-private agency for the control of settlements.

The Laws of 1938

RATANLAL RANCHHODDAS. Advocate. Bombau High Court.

MANHAR R. VAKIL, Barrister-at-Law.

- merely with the making of textual alterations in previously existing Acts. As much printing space was occupied and no useful purpose was served by the reproduction of these amending Acts, the present Act was passed which repeals Acts, Regulations, and sections of Acts or Regulations which were passed to make textual alterations in previous enactments. Enactments which are themselves repealed or enactments the effect of which is spent and certain Acts which have, by virtue of the Government of India (Adaptation of Indian Laws) Order, 1937, ceased to have effect, are also formally repealed. Some of the enactments now repealed contained saving clauses which provided generally for matters such as the interpretation of references to and the saving of appointments made and other things done under Acts superseded by other Acts. Section 3 of the present Act preserves the effect of these savings. present Act preserves the effect of these savings. Section 6A of the General Clauses Act, 1897, while declaratory of the principle that would probably be applied in determining the effect of the repeal of an amending Act making textual alterations in a provincial Act, does not expressly cover Central Acts or Regulations amending provincial Acts. As some of the enactments repealed by the present Act are of this nature, section 4 provides in express terms that the repeal of an amending enactment by the Act would not affect the continuance of any amendment made by the enactment so repealed.
- 2. Indian Companies (Amendment) Act. This Act removes certain inaccuracies and Inia Act removes certain maccuractes and corrects certain errors which crept into the Indian Companies Act, 1913, in the course of the extensive amendment of that Act by the Indian Companies (Amendment) Act, 1986. Some of the important amendments are as follows. Under section 8 a company will be deemed to have compiled with the provisions of section 130 of the original Act if proper books of account relating to the transactions effected at its branch office are kept at the branch office and proper summarised returns made up to dates at intervals of not more than two months are sent by the branch office to the registered office of the company. Section 9 includes the income and expenditure account to the documents required to be filed with the Registrar of Companies under section 134. Section 11 provides India by external companies. The marked that when any proceedings are instituted increase in the volume of life insurance business, against any delinquent director under section and the development of other forms of insurance

- 1. The Repealing Act.—It had been the practice to print, in the Volumes entitled include any banker or legal adviser of the company lature," the amending Acts which were concerned as auditor, whether that person is or is not an as auditor, whether that person is or is not an officer of the company. Sections 12 and 13 deal with the difficulty of assigning a meaning to the expressions "registered office of the Company" and "Registrar" for the purposes of the application of sections 109 to 125 of the Act to non-Indian Companies which have no registered office in British India, and for whom there is no Registrar in British India with whom they can register. In such cases it is now provided that the principal place of business in British India of the Company will take the place of the registered office of the Company and the Registrar will be the Registrar of the Province in which such principals and the registered office of the Company and the Registrar will be the Registrar of the Province in which such principal place of business is situated. Section 17 ensures that a banking company does not find itself in the position of a holding company to a subsidiary company by providing that a banking company will not hold shares in any company whether as pledgee, mortgagee or absolute owner of an amount exceeding forty per cent, of the issued share capital of that company.
 - 3. The Dangerous Drugs (Amendment)
 Act.—By acceding to the Dangerous Drugs
 Convention, 1925, the Government of India
 undertook, in view of the provisions of Article 15, to secure that no consignment of substances covered by the Convention exported from one country to another country should be permitted to pass through British India, whether or not removed from the ship or conveyance in which it was conveyed, unless a copy of the export authorization certificate was produced to the competent authorities in British India. The present Act by amending definition (4) in section 2 of the Dangerous Drugs Act, 1980, enforces this control in the case of dangerous drugs conveyed in a vessel that calls at a British Indian Port if the drugs are not transhipped or discharged at such port but are retained on board and are so manifested.
- The Insurace Act.—Before the passing of this Act the law relating to insurance in British India was contained in Act V of 1912, which regulated Provident Insurance Societies. Act VI of 1912, which regulated Life Assurance Companies, and Act XX of 1928 which amended the latter in certain respects but was primarily aimed at providing for the collection of statistical information in respect of insurance business other than life insurance business carried on in 237 it will be the duty of the liquidator and of business in British India since 1912 suggested every officer and agent of the company to give that more comprehensive legislation was needed all assistance in connection with the procedurion. I and therefore in 1935 the Government of India

appointed a special officer to examine the principal place of business or domicile outside material which had been collected concerning British India his application for registration the amendment of insurance law. In 1936 a small advisory committee of experts representing various interests was assembled to consider in detail the recommendations contained in the report prepared by the special officer. The present Act was the outcome of deliberations.

Section 2 defines certain words and phrases used in the Act. "Policy-holder" includes the person who is the absolute assignee of the benefits under the policy. "Approved securi-ties" means Government securities, and any other security charged on the revenues of the Central Government or of a Provincial Government, or guaranteed fully as regards principal and interest by the Secretary of State in Council or the Central Government or a Provincial Government; and any debenture or other security for money issued under the authority of any Act of a legislature established in British India by or on behalf of a Port Trust or Municipal Corporation or City Improvement Trust in any Presidency-town, "Insurer" means (a) any individual or unincorporated body of individuals or body corporate incorporated under the law of any country other than British India, carrying on insurance business which carries on that business in British India, or has his or its principal place of business or is domiciled in British India; (b) any body corporate carrying on the business of insurance, which is a body corporate incorporated under any law for the time being in force in British India, and (c) any person who in British India has a standing contract with underwriters who are members of the Society of Lloyd's whereby such person is authorised within the terms of such contract to issue protection notes, cover notes, or other documents granting insurance cover to others on behalf of the underwriters. "Life insurance business" includes annuity business, that is to say, the business of effecting contracts of insurance for the granting of annuities on human life and, if so provided in the contract of insurance, disability and double indemnity accident benefits. "Superintendent of Insurance" means the officer, who shall be a qualified actuary, appointed by the Central Government to perform the duties of the Superintendent of Insurance under this Act.

Under section 8 it is incumbent upon every insurer to obtain a certificate of registration from the Superintendent of Insurance. Every of a company; the name, address and occupation of the directors; a statement of the class or classes of insurance business done; a certified copy of the published prospectus and of the standard policy forms of the insurer and statements of the assured rates, advantages, terms and conditions to be offered in connection with insurance policies together with a certificate in connection with life insurance business by an actuary that such rates, advantages, terms and conditions are workable and sound and the

must be accompanied by a statement setting forth the requirements not applicable to nationals of the country in which such insurer is incorporated which are imposed by the laws of that The country upon Indian nationals as a condition of carrying on insurance business in the country. The Superintendent of Insurance is authorised to withhold or cancel a registration in the case of any insurer having his principal place of business outside British India, if he is satisfied that in the country in which the insurer has his principal place of business, Indian nationals are debarred by the law of the country from carrying on the business of insurance. Section 4 lavs down the minimum limit for annuities and other benefits secured by policies of life insurance by providing that no insurer will pay an annuity of fifty rupees or less or a gross sum of rupees five hundred or less exclusive of any profit or bonus. Section 6 prescribes that no insurer will be registered unless he has as working capital a net sum of not less than fifty thousand rupees exclusive of the deposit to be made before registration and exclusive in the case of a company of any sums payable as preliminary expenses incurred in the floatation of the company. Under section 7 every insurer must deposit and keep deposited with the Reserve Bank of India cash or approved securities, estimated at the market value of the securities on the day of the deposit; in the case of life insurance only, two hundred thousand rupees: fire insurance one hundred and fifty thousand rupees; marine insurance, one hundred and fifty thousand rupees and accident and miscellaneous insurance including workmen's compensation and motor car insurance, one hundred and fifty thousand rupees. In the case of insurers working in conjunction with Lloyd's a deposit of an amount one-and-a-half times that made by the ordinary insurer is required. Provision is also made in certain cases for the payment of deposit by instalments, for utilising deposits already made under the Indian Life Assurance Companies Act, 1912, for the return in cash of deposits made in cash whenever such deposits are returnable under the Act and for the substitution of other approved securities for securities already lodged with the Reserve Bank of Indla, Section 8 makes a general reservation of deposits, saving them for meeting liabilities arising out of policies of insurance. In the case of a deposit made in respect of life insurance business the deposit made in respect thereof will not be available for application for registration must be accompanied the discharge of any liability of the insurer by certain particulars, namely, a certified copy other than liabilities arising out of policies of the memorandum and articles of association life insurance issued by the insurer. Section 9 authorises a Court to order the refund of deposits where an insurer has ceased to carry on in British India his insurance business. Section 10 requires an insurer to keep a separate account of all the receipts and payments in respect of each class of insurance business which he carries on. Where he carries on the business of life insurance, the excess of receipts over payments must be carried to a separate fund called the life insurance fund. The life insurance fund will be absolutely conditions are workable and sound and the the security of the life policy-holders and will prescribed fee for registration, being not more not be applied save as provided by the Act for than one hundred rupees for each class of any purposes other than those of life insurance. business. In the case of an insurer baying his Under section 11 an insurer is required to propers rance business carried on by him. Section 12 liability on policies of life insurance maturing balance sheet by auditors to whom the provisions of section 145 of the Indian Companies Act, 1913, are made applicable. Section 13 requires every insurer carrying on life insurance business once in every five years to cause an investigation to be made by an actuary into the financial condition of his life insurance business including valuation of his liabilities thereto, abstract of the report of such actuary must be made in accordance with the requirements contained in the schedules to the Act. section 14 every insurer must maintain (a) a register of record of policies with particulars as to the name and address of each policy-holder, the date when the policy was effected and a record of any transfer, assignment or nomination, and (b) a register or record of claims with particulars of every claim made, the date on which it was discharged or rejected and the grounds of rejection. Section 15 which deals with sub-mission of returns provides that the audited accounts and statements referred to in section 11 and the abstract and statement referred to in section 13 must be printed and four copies thereof must be furnished to the Superintendent of Insurance within six months from the end of the period to which they refer. Provision is made for the extension of this time by a further period not exceeding three months. Section 16 deals with the returns by insurers established outside British India. Under section 18 every insurer must furnish to the Superintendent of Insurance a copy of every report on the affairs of the concern which is submitted to the members or policy-holders of the insurer and under section 19 an abstract of the proceedings of every general meeting within a specified time. Every return furnished to the Superintendent of Insurance is, under section 20, open to inspection and any person may procure a copy of it on payment of a fee. Section 21 empowers the Superintendent of Insurance, if it appears to him that any return is inaccurate or defective, to get from the insurer further information to correct or supplement such return, submit for his examination any book of account, register or other document or statement, examine any officer of the insurer on oath in relation to the The Superintendent may decline to accept any such return unless the inaccuracy has been corrected or the deficiency supplied within a certain time. The Court may cancel any order of the Superintendent or may order the acceptance of any return which he has declined to accept if the insurer satisfies the Court that the action of the Superintendent was in the circumstances unreasonable. Section 22 empowers the Superintendent to order revaluation when it appears to him that an investigation or valuation to which section 13 refers does not properly indicate the condition of the affairs of the insurer by reason of the faulty basis adopted in the valuation.

Section 27 requires every insurer incorporated

a balance sheet, a profit and loss account and a insurance policies in India on account of matured revenue account in respect of each class of insu- claims and the amount required to meet the deals with the audit of these accounts and for payment in India less certain specified amounts. In the case of an insurer incorporated or domiciled elsewhere than in British India or the United Kingdom he must maintain assets of an amount equal to his liabilities to policyholders in India including matured claims and reserves for outstanding policies in India less any claims he has against such policies. These assets will be vested in trustees resident in British India and approved by the Central Government. Section 28 requires every insurer carrying on life insurance business to submit to the Superintendent of Insurance, twice a year, a statement showing that assets are so held invested. Section 29 prohibits the insurer from granting loans or temporary advances either on hypothecation of property or on personal security or otherwise, except loans on life policies issued by him within their surrender value, to any director, manager, managing agent, actuary, auditor or officer of the insurer if a company, or where the insurer is a firm, to any partner therein. An insurer may however any partner therein. An insurer may nowever make loans to a banking company and a company may do likewise to its subsidiary company or to a company of which it itself is a subsidiary company. Section 32 prohibits, after the commencement of the Act, the employment of managing agents by an insurer for the conduct of his business. Existing managing agents must cease to hold office on the expiry of three years from the commencement of the Act and their remuneration must not be more than two thousand rupees per month, including salary and commission.

> In certain cases, e.g., where an insurer is unable to meet his obligations the Superintendent of Insurance is empowered under section 83 to appoint an auditor to investigate the affairs of the insurer. He may also do so if he receives a requisition in this behalf signed by shareholders of an insurer being a company not less in number than one-tenth of the whole body of shareholders and holding not less than one-tenth of the whole share capital or if he receives a requisition in this behalf signed by not less than fifty policy-holders holding policies of life insurance that have been in force for not less than three years and are of the total value of not less than fifty thousand rupees and supported by an affidavit affirming the grounds for the requisition. The Court however is empowered to forbid such action by the Superintendent if the insurer satisfies it that it is unnecessary in the circum-stances. The Superintendent is authorised to apply to the Court to have the business of an insurer wound up if as a result of any investigation he is of opinion that it is necessary so to do in the interests of the policy-holders. Under section 34 the expenses of such investigation have to be paid by the insurer.

Under section 35 no life insurance business of an insurer of Indian domicile can be transferred to or amalgamated with the life insurance Section 27 requires every insurer incorporated to or amaigamated with the life insurance or demiciled in British India or the United business of any other insurer except in accordance with a scheme sanctioned by the Court in certain specified securities, assets equivalent to not less than fifty-five per cent, of the sum of insurers concerned. Two months before an the amount of his liabilities to helders of life application is made to the Court to sanction any such scheme, notice of the intention to make the of commission an amount exceeding, in the case application must be sent to the Central Government with copies of the following documents:diaft agreement of the proposed transfer of amalgamation; statements of the assets and liabilities of the insurers concerned and actuarial reports on which the scheme is founded. Under section 36 the Court may sanction the arrange-ment if it is satisfied that no sufficient objection to it has been established. Under section 37 within three months from the date of the completion of the amalgamation or transfer the insurer is required to furnish certain documents to the Central Government.

A transfer or assignment of a policy of life insurance can be made under section 38 and will be complete and effectual upon the execution of an endorsement upon the policy itself or by a separate instrument signed by the transferor or by the assignor and attested by one witness. The transfer or assignment will be operative as against an insurer after a notice in writing of the transfer or assignment has been delivered to the insurer at his principal place of business in British India by the transferor or transferee. Priority in respect of claims under a transfer or assignment as between persons interested in the policy will be regulated by the date on which the notice aforesaid is delivered to the insurer. The insurer must record the fact of such transfer or assignment upon the receipt of the notice and must grant a written acknowledgment of its receipt on the request of the person giving the notice or of the transferee or assignee on payment of a fee of one rupee. An assignment in favour of a person made with the condition that it will be imperative or that the interest will pass to some other person on the happening of a specified event during the life of the policy-holder and an assignment in favour of the policy-noider and an assignment in lavour
of the survivor or survivors of a number of
persons, is valid. Under section 39 the holder
of a policy of life insurance may, when effecting
the policy or at any time before it matures for
payment, nominate the person or persons to
whom the money secured by the policy should
be paid in the event of his death. Such nomination to be effectual, unless it is incorporated in the text of the policy, must be made by an endorsement on the policy communicated to the insurer and registered by him in the records relating to the policy. Such nomination may be cancelled or changed at any time before the policy matures for payment. A transfer or assignment of a policy will automatically cancel a nomination. Where a policy matures for payment during the lifetime of the policy-holder or where the nominee or nominees die before or where the nominee or nominees die before the policy matures for payment, the amount secured by the policy will be payable to the policy-holder or his heirs or legal representatives. Insurance by a married man for the benefit of his wife or children which are subject to section 6 of the married Women's Property Act, 1874, are excluded from the above provisions,

Bection 40 prohibits payment by way of commission or otherwise for procuring insurance

of life insurance business, forty per cent. of the first year's premium payable on any policy effected through him and five per cent. of a renewal premium, or in the case of business of any other class, fifteen per cent, of the premiam. Insurers, in respect of life business only, are however allowed to pay during the first ten years of their business to their insurance agents fiftyfive per cent. of the first year's premium payable on any policy effected through them and six per cent. of the renewal premiums. Section 41 prohibits the allowance of rebates of the commission payable or any rebate of the premium shown on the policy. A person taking out or renewing a policy cannot accept any rebate except such as may be allowed by the published prospectuses or tables of the insurer. Default in complying with this provision is made punishable with a fine upto one hundred rupees and where the default is made by a person effecting or renewing a policy, to a fine upto fifty rupees only. Under section 42 the Superintendent of Insurance is authorised to issue to any individual making an application a license to act as an insurance agent for the purpose of soliciting insurance business on the payment of a fee not exceeding one rupee. The holder of such a licence is entitled to act as an agent for any registered insurer. The licence will expire on the 31st day of March in each year and will be renewed from year to year on payment of a fee of one rupee. The following are disqualified from holding a licence under the Act: a minor; a person of unsound mind; a person who has been found guilty of criminal misappropriation or criminal breach of trust or cheating; and a person who has been found guilty of or has knowingly participated in or connived at any fraud, dishonesty or misrepresentation against an insurer or an assured. The Superintendent of Insurance is required to cancel the licence of an insurance agent who is found to suffer from any of the above disqualifications but if the agent has knowingly contravened any provision of the Act the Superintendent may exercise his discretion as regards the cancellation of the licence. Section 43 requires an insurer to maintain a register showing the name and address of every licensed insurance agent appointed by him. Any individual who acts as an insurance agent without holding a licence is liable to a fine upto fifty rupees and an insurer who appoints such an individual not so licensed is liable to a fine upto rupees one hundred, Under section 44 no person can refuse payment to a licensed insurance agent, who has served him continually and exclusively for at least ten years, of commission on renewal premiums, in respect of life insurance business done in India, by reason only of the termination of his agreement, except for fraud. Such agent, however, must not, after his ceasing to act as agent, directly or indirectly solicit or procure insurance business for any other person.

Under section 45 no policy of life insurance can be called in question, after the expiry of two years from the date of its issue, by an insurer, business in India to any person except an insu-presses agent licensed under the Act or a person proposal for insurance or in any document lead-acting on behalf of an insurer who employs in the ground that a statement made in the rance agent licensed under the Act must not be paid by way ment was on a material matter and fraudulently

British India of any sum secured thereby and to sue for any relief in respect of it in British India, the law applicable to the case being British Indian law. Where there are conflicting claims to or insufficiency of proof of title to the amount secured by a policy of life insurance, section 47 requires the insurer in such a case to apply before the expiry of nine months from the date of the maturing of the policy, to pay the amount into Court. A receipt granted by the Court for any such payment will be a satisfactory discharge to the insurer for the payment of such amount. An application under this section will not be entertained by the Court if it is made before the expiry of six months from the death of the insured, or the maturing of the policy by survival. Under section 48, which comes into operation a year after the commencement of the Act, where the insurer is a company carrying on the business of life insurance not less than one-fourth of the whole number of the directors of the company must be persons having the prescribed qualifications and holding policies of life insurance issued by the company and must be elected to the Board of Directors by the holders of policies of life insurance issued by the company. Section 49 prohibits the payment of dividends or bonuses in respect of life insurance policies except out of a surplus ascertained after actuarial valuation of the assets and liabilities of the insurer. Under section 50 an insurer must, within three months of the lapsing of a policy of life insurance, give notice to the policy-holder informing him of the options available to him. Section 52 prohibits any business upon the dividing principle, that is to say, on the principle that the benefit secured by a policy is not fixed but depends either wholly or partly on the results of a distribution of certain sums amongst policies becoming claims within certain time-limits, or on the principle that the premiums payable by a policy-holder depend wholly or partly on the number of policies becoming claims within certain time-limits. An insurer is, however, not prevented from allocating bonuses to holders of policies of life-insurance either as reversionary additions to the sums insured or as immediate cash bonuses.

The Court is authorised under section 53 to order the winding up of an insurance company on a petition presented in this behalf by shareholders not less in number than one-tenth of the whole body of shareholders and holding not less than one-tenth of the whole share capital or by not less than fitty policy-holders holding policies of life insurance that have been in force for not less than three years and are of the total value of not less than fifty thousand rupees. The Court may also order the winding up of an insurance company on the application of the Superintendent of insurance on certain specified grounds e.g. if it appears to him that the company is insolvent or that its continuance is rejudicial to the interests of the policy-holders. Under section 54 an insurance company cannot be wound up voluntarily except for the purpose of effecting an amalgamation or a re-construction of the company, or on the ground that by pays or undertakes to pay on any policy of reason of its liabilities it cannot continue its insurance an annuity exceeding fifty rupess or business. The following sections relate to a gross sum exceeding five hundred rupess

made by the policy-holder. The holder of a proceedings in connection with the winding up policy of insurance issued in British India has of insurance companies. Section 55 deals with the right under section 46 to receive payment in the ascertainment of the asserts and liabilities of an insurance company and section 56 provides for the application of surplus assets of life insurance fund in liquidation or insolvency. Winding up of a secondary company in conjunction with the principal company is next dealt with in section 57 where the business of the secondary company is transferred to the principal company under an arrangement. Section 58 provides for the partial winding up of an insurance company i.e. its affairs in respect of any class of business comprised in its undertaking may be wound up under a scheme prepared and submitted for confirmation of the Court. Under section 59 the liquidator or assignee must apply to the Court for an order for the return of the deposit made by an insurance company under section 7 of the Act. Section 60 provides for the giving of notice by the liquidator or assignee of the ascertained value of the liability of a company to persons entitled to or interested in the policies granted by the company. A person to whom notice is so given is bound by the value so ascertained unless he gives notice of his Intention to dispute such value. Section 61 empowers the Court to reduce the amount of the insurance contracts of an insurance company in liquidation. In the case of an insolvent company carrying on life insurance business the Court may in place of making a winding up order reduce the amount of the insurance contracts of the company.

Sections 62-64 deal with special provisions relating to external companies carrying on business in British India. Section 62 empowers the Central Government to impose such disabilities on non-Indian companies as are imposed by the law or practice of any country outside British India on British Indian Companies carrying on insurance business in any such country. Section 63 requires certain particulars to be filed by foreign insurance company with the Superintendent of Insurance within three months from the establishment by it of a place of business within British India or the appointment by it of a representative in British India and section 64 requires such a company to keep at its principal office in British India books of account, registers and documents relating to the insurance business transacted by it in India.

Part III of the Act, comprising sections 65 to 94, deals with provident societies. Section 65 defines a "provident society" as a person who, or a body of persons which, receives premiums or contributions for securing annuities on human life or receives premiums or contributions for insuring money to be paid on the happening of certain contingencies, e.g., (a) the birth, marriage, death of any person or the survival by a person of a stated age or contingency; (b) failure of issue; (c) the occurrence of social, religious or ment from employment; (e) disablement in consequence of sickness or accident; (f) the necessity of providing for the education of a dependant. This Part according to section 66 is not applicable to a provident society which haves or undertakes to new on any relief of

exclusive of any profit or bonus. " Policy " here includes a series of policies covering one or more of the contingencies specified above. Under section 67 no provident society can use as its name any combination of words which fails to include the word "provident" or which includes the word "life." No provident society under section 68 can receive any premium to be paid to any person other than the person paying part to any person other than the person paying it or the wife, husband, child, grand-child, parent, brother or sister, nephew or niece of such a person. Section 69 prohibits the carrying on by a provident society, of any business upon the dividing principle and authorises the Superintendent of Insurance to take steps to wind up such a provident society. In the case of pro-vident societies carrying on such business at the commencement of the Act the Superintendent of Insurance may at his discretion permit such provident societies to continue business for a period not exceeding two years. Section 70 provides for the registration of provident societies which cannot receive any premium or contribution until it has obtained from the Superintendent of Insurance a certificate of registration. The Superintendent of Insurance is authorized in certain cases to obtain sanction of the Court for cancellation of the registration of a provident society, e.g., where the society is insolvent or its business is conducted fraudulently or not according to its rules. The Superintendent of Insurance may, instead of applying for cancellation of the registration of an insolvent society, make a recommendation to the Court that the contracts of the society should be reduced in a certain manner. Section 71 prohibits the employment by provident societies of managing agents after the commencement of the Act and the other provisions contained in section 32 of the Act which apply to insurers are made applicable to provident societies. The paid-up capital sufficient to provide a working capital of a provident society must not be less than five thousand rupees exclusive of deposits made under the Act and expenses incurred in forming a company. Section 73 requires every provident society before it applies for registration to deposit with the Reserve Bank of India cash or approved securities amounting to five thousand rupees and thereafter make each year a further deposit of not less than one-fifth of the gross premium income for the year (including admission fees and other fees) until the total amount deposited comes to fifty-thousand rupees. Section 74 indicates certain particulars which every provident society must set forth in its rules and section 75 provides for the amendment of these rules. Section 77 requires every provident society to have an office on the outside of which must be displayed its name in a conspicuous position in legible letters. Under section 78 where an official publication of a provident society contains a statement of the amount of the authorised capital of the society the publication must also contain a statement of the amount of the capital subscribed and paid-up. Section 79 requires every provident society to keep at its registered office certain registers and books, e.g., a register of members, a record of policies, a register of claims, etc. Section 80 provides for the prepara-

society showing among other things the number of new policies effected, the number of existing policies discontinued, the amount of claims made and the amount paid in satisfaction and amount paid as allowances to agents and canvassers. Under section 81 every provident society must once in every five years cause an investigation to be made into its financial condition by an actuary. The revenue account and balance sheet with the auditor's report must be furnished as returns to the Superintendent of Insurance under section 82 within three months from the end of the period to which they relate. Under section 83 every scheme of insurance which a provident society proposes to put into operation must be examined by an actuary and the society must not receive any premium or contribution in connection with it until the actuary has certified that the scheme is sound and such certificates has been forwarded to the Superintendent of Insurance. Section 85 requires every provident society to keep invested in Government securities on account not less than fifty per cent, of the total assets of the society, loan can be made out of the assets of a provident society to any director or officer of the society except on a policy of insurance held in the society and within its surrender value and no such loan can be made to any concern of which a director or officer of the society is a director or partner. Section 86 provides for the inspection of books of a provident society by the Superintendent of Insurance or by any member or policy-holder of the society and section 87 for inquiry by an auditor into the solvency of a society by or on behalf of the Superintendent. Under section 88 the Court may order the winding up of a provident society, if its registration is cancelled by the Superintendent of Insurance and he applies for its winding up. A provident society may be wound up voluntarily for the purpose of effecting an amalgamation or reconstruction of the society or on the ground that by reason of its liabilities it cannot continue its business. The Superintendent of Insurance may in any case where he has ordered the cancellation of registration of a society order its winding up. Section 89 deals with the Court's power to order the reduction of the amount of power to cruer the reduction of the amount of the insurance contracts of a provident society. Section 90 provides for the appointment of a liquidator when a provident society is to be wound up. Except where the winding up is done by an order of the Court, the Superintendent of Insurance must appoint the liquidator and determine his remuneration. A liquidator may be removed by the Superintendent if he fails to discharge his duties properly. Section 91 empowers the liquidator among other things to institute and defend legal proceedings on behalf of the society, to determine the contribution of members of the society to its assets and to investigate claims against the society. Section 92 deals with the procedure at liquidation. The liquidator after taking charge of all property and documents of the society must call a meeting of the creditors of the society within a certain specified time. At the meeting so held the creditors must determine whether they want the claims, etc. Section 80 provides for the preparation of revenue account and balance sheet of a place of or jointly with the liquidator already provident society and the auditing of these appointed or for the appointment of a committee Annual statements must also be prepared by the

a general power of supervision over the acts officer of an insurer without the previous sanction of the liquidator. The liquidator must then ascertain the amount of the society's liability. He must also make a valuation of its assets and an estimate of the costs of the winding up and on the basis of these settle the list of contributories. Under section 93 as soon as the affairs of ries. Under section 53 as soon as the anairs of a provident society are wound up the liquidator must prepare an account of the winding up showing how it was conducted and place it before a meeting of the members, creditors and contributories of the society. Three months after the registering of the account by the Superintendent of Insurance the latter must declare the society dissolved and cause the dissolution of the society to be notified. The provisions of sections 38 and 39 relating to assignment, transfer and nomination in the case of life insurance policies are made applicable by section 94 to policies of insurance issued by provident societies. No nomination can be valid if the person nominated is not the husband. wife, father, mother, child, grand-child, brother, nephew or niece of the holder of the policy.

Part IV of the Act contains certain special provisions for two special classes of insurers, Mutual Insurance Companies and Co-operative Life Insurance Societies. Section 95 defines a "Mutual Insurance Company" as an insurer being a company incorporated under the Indian Companies Act, 1913, which has no share capital and of which by its constitution only policy-holders are members; "Co-operative Life Insurance Society" means an insurer being a society registered under the Co-operative Societies Act, 1912, which carries on the business of life insurance and which has no share capital and of which by its constitution only original members and all policy-holders are members. Section 97 requires every Mutual Insurance Company and Co-operative Life Insurance Society to have a working capital of fifteen thousand rupees exclusive of the deposit to be made under the Act and of any preliminary expenses incurred in the formation of the Company or society. Every such company or society must under section 98, in respect of the life insurance business carried on by it, keep deposited in the Reserve Bank of India a sum of two hundred thousand rupees in cash or in approved secu-Provision is made for the payment of fixed deposit in instalments. Under section 99 a transferee or assignee of a policy issued by a Mutual Insurance Company or a Co-operative Life Insurance Society does not become a member of such a company or society merely by reason of the transfer or assignment.

Part V contains certain miscellaneous provisions. Sections 102 to 106 prescribe penalties for the following:—default in complying with or acting in contravention of any requirement of the Act; transaction of insurance business in contravention of certain specified sections of the Act; knowingly making a statement false in any material particular in a document required by the Act; wrongfully obtaining or withholding any property of an insurer and the diminishing of life insurance fund by reason of any contravention of the provisions of the Act. Under section 107 except where proceedings are in stituted by the Superintendent of Insurance, no proceedings under this act can be instituted against any master, or other

of the Advocate-General of the Province where the principal place of business of such insurer is situate. Under section 108 if in any proceeding, civil or criminal, it appears to the Court hearing the case that a person liable in respect of negligence, default, breach of duty, or breach of trust has acted honestly and reasonably, the Court is empowered to relieve him from his liability. A Court inferior to that of a Presidency Magistrate or Magistrate of the First Class cannot according to saction 109 try any offence under the Act. Section 110 provides for appeals from certain specied orders to the principal Court of civil jurisdiction within whose local limits the insurer concerned is situate. Section 112 permits an insurer carrying on life insurance business to declare an interim bonus or bonuses to policy-holders whose policies mature for payment by reason of death or otherwise during the inter-valuation period. Under section 113 where a definite number of premiums is payable, a policy of life insurance on which all premiums have been paid for three consecutive years will acquire a guaranteed surrender value and will not lapse by reason of non-payment of further premium but will be keptalive to the extent of its paid-up value, A policy so kept alive will not participate in any profits of the insurer earned after the conversion of the policy into a paid-up policy. The above provisions are not applicable to certain specified policies, e.g., policies in which the sum assured is payable only on the happening of a contingency which may not arise or policies where the paid-up value will be less than one hundred rupees or policies in which the surrender value is automatically applied under the terms of the contract. Section 114 empowers the Central Government to make rules to carry out the purpose of the Act. Such rules must be laid before the two Chambers of the Central Legislature and the rules may be modified or rejected by the Chambers. Under section 115 the Central Government may after the forms contained in the Schedules for the purpose of adapting them to the circumstances of an insurer. Section 116 empowers the Central Government to exempt from certain requirements relating to deposit or to the keeping of assets in India any insurer constituted incorporated or domiciled in an Indian State. Under section 123 the following enactments are repealed :—The Provident Insurance Societies Act, 1912, the Indian Life Assurance Companies Act, 1912, and the Indian Insurance Companies Act, 1928.

The Act contains six Schedules which contain Regulations and Forms for the preparation of balance sheet, profit and loss account, and revenue accounts. Regulations for the preparation of abstracts of actuaries' reports and requirements applicable to such abstracts. Regulations for preparing statements of business in force and requirements applicable to such statements and rule as to the valuation of the liabilities of an insurer in insolvency or liquidation.

travention of the provisions of the Act. Under section 107 except where proceedings are instituted by the Superintendent of Insurance, no proceedings under this act can be instituted of the superintendent of the provisions of the Act. Under section 107 except where proceedings and act and acc artial amount against and insurer or director, manager, or other

waste land for these purposes does not exist. Under section 10 persons included in the forces within reach of cantonments. It may also be engaged in field firing or artillery practice may necessary to exclude the owners of the land from carry out such practice with lethal missiles and it for short periods during such operations in the interests of their safety. In England and in most other countries, the military authorities have statutory powers to enable them to carry out the essential operations and a regular procedure is prescribed by law for the assessment and payment of compensation for damage and inconvenience. The present Act follows closely the Military Manœuvres Act and the Military Lands Act in England.

Chapter I of the Act deals with Manœuvres. Section 2 empowers the Provincial Government to authorise by notification the execution of Military Manœuvres over any specified area during a period not exceeding three months. The same area or any part of it cannot ordinarily be so specified more than once in any period of three years. Under section 3 persons who are included in the Military forces engaged in the Manœuvres are empowered to pass over, or encamp, construct Military works of a tempo-rary character or execute military manœuvres on the specified area and supply themselves with water from any source in the area provided the amount taken is not in excess of the reasonable requirements of the military forces or such amount does not curtail the supply ordinarily required by those entitled to its use. This section however prevents entry on any well or tank held sacred by any religious community or any place of worship or ground attached thereto or building used for the disposal of the dead or any educational institution, factory, workshop or store or premises used for trade, business or manufacture or any garden or pleasure ground manuscure or any garden or pleasure ground or any ancient monument. Section 4 imposes on the Officer in Command the duty to repair damage done to lands as a result of the manœuv-res and section 5 provides for the payment of compensation from the Defence Estimates for any damage to person or property arising from the manoguvres. Section 6 prescribes the method of assessing compensation which is determined by the Revenue Officer who must disburse on the spot to the claimant the compensation so determined. Appeals against the decision of the Revenue Officer may be made to a Commission consisting of the Collector of the district as chairman, a person nominated by the Officer in Command and two persons nominated by the District Board. The decision of the commission is final and no suit can lie in any civil Court in respect of any matter decided by the commission. Under section 7 any person who witfully obstructs the execution of the manœuvres or without authority enters any camp or without authority interferes with any flag or mark or apparatus used for the manœuvres is liable to a fine of ten rupees.

Chapter II deals with field firing and artillery " Field firing," under section includes air armament practice. Section 9 empowers the Provincial Government by notification to define any area within which for a specified term of years the carrying out periodi-

engaged in field firing or artillery practice may carry out such practice with lethal missiles and exercise the rights conferred on forces engaged in military manœuvres as to the taking of water. These persons are however not debarred entry into any place specified in section 3 above and situated in a danger zone, to the extent that may be necessary to ensure the exclusion from it of persons and domestic animals. The Commanding Officer is empowered to declare any area within the notified area to be a danger zone and the Collector thereupon must prohibit the entry into and secure the removal from such zone of all persons and domestic animals during the time the discharge of lethal missiles is taking place. The provisions contained in sections 4, 5 and 6 as to repair of damage to lands, right to compensation for damage to person or property and method of assessing compensation are made applicable to field firing and artillery practice by section 11. Compensation under this section. however, includes compensation for exclusion or removal from a danger zone of persons or domestic animals, which must be disbursed before the exclusion or removal is enforced and also includes compensation for any loss of employment or deterioration of crops resulting from such exclusion or removal. Under section 12 a person who obstructs the carrying out of field firing or artillery practice or without authority enters or remains in any camp or danger zone or without authority interferes with any flag or mark or target or apparatus used for the practice is liable to a fine of ten rupees. Section 13 empowers the Provincial Government to make rules for carrying out the purposes of the Act,

6. The Destructive Insects and (Amendment) Act.—To prevent the further spread of 'San Jose Scale '(Aspidiotus Pernicious) which is a serious fruit pest known to exist in certain parts of India, the present Act empowers the Central Government to prohibit or regulate the movement from one part of British India to another of living plants likely to cause infection to any crop. The Act also enables the Central Government to exercise control over the importations, and movement from one province to another province of live insects which are or may be destructive to crops in other ways than by causing infection to them. A person contravening the provisions of this Act is liable to a fine of two hundred and fifty rupees and upon any subsequent conviction to a fine upto two thousand rupees.

7. The Child-Marriage Restraint (Amendment) Act.—The provisions of the original Act are made applicable by the present Act to (a) all British subjects and servants of the Crown in any part of India; and (b) all British subjects who are domiciled in any part of India wherever they may be,

The Indian Finance Act.—This Act continues for a further period of one year certain duties and taxes imposed under the Indian Finance Act, 1936, which would otherwise cease to have effect from April 1, 1938. Section specified term of years the carrying out periodi2 provides for the continuance of the existing cally of field firing and artillery practice may be duty on salt of Rs.1-4-0 per maund. Sections authorised. The section prescribes certain 3 and 4 continue the present inland postage requirements as to the publication of a notice rates and the existing rates of income-tax and of its intention to issue such a notification.

8. The Indian Tea Control Act .- The Indian | an export quota which must be an amount Tea Control Act, 1933, which was passed to give effect to the International Scheme for regulation of the export of tea and for the control of extension of tea cultivation, expired on March 31, 1938. Representatives of the tea industry in India, Ceylon and the Netherlands Indies have executed an agreement providing for the renewal of the scheme, which also expired on March 31, 1938, for a further period of five years. This Act gives legislative sanction to the operation of the renewal scheme for a period of five years from April 1, 1938.

Under section 2 'export' means to take out of British India by land, sea or air to any place outside India other than the French and Portuguese Settlements bounded by India or a country notified in this behalf by the Central Government. 'Indian Export Allotment' means the total quantity of tea which may be exported during any one financial year. 'Standard export figure' means a quantity of 383,242,916 pounds avoirdupois of tea.

Section 3 deals with the constitution by the Central Government of the Indian Tea Licensing Committee consisting of certain specified members nominated or elected by certain bodies or authorities. Under section 4 if any authority or body falls to make within two months any nomination or election which it is entitled to make, the Central Government may itself nominate a member to fill the vacancy. No act done by the Committee can be questioned on the ground merely of the existence of any vacancy in or any defect in the constitution of the Committee. Sections 5 and 6 empower the Committee to make by-laws and appoint sub-committees and executive officers the efficient performance of the the efficient performance of the duties imposed upon it by the Act. Under section 7 all acts of the Committee, save those in respect of proceedings and orders under sections 28, 29 and 30, are subject to the control of the Central Government which may cancel, suspend or modify any such Act. Any person aggrieved by any order of the Committee under section 14 may appeal either to the Central Government or the High Court within sixty days from the date of such order. An appeal preferred to the Central Government will bar an appeal against the same order to the other. Section 8 deals with the keeping of the accounts by the Committee and the examination and auditing of these annually by auditors appointed by the Central Government. Section 9 authorises the Central Government to dissolve the Committee by notification in the Official Gazette.

Chapter II of the Act which deals with control over export of tea is not made applicable to tea imported into British India from any port outside India or shipped as stores on board any vessel or exported by post in packages not exceeding one pound accordance in weight. Section 12 prohibits the export of tea without a licence issued by the Committee. Tea seeds cannot also be exported without a permit issued by the Central Government. Section 13 provides rupees for any subsequent offence. Penalty is for the declaration by the Central Government also imposed for illicit export of tes and power of the Indian export allotment. Section 14 is given to the Court for removal of tes planted deals with the right of a tes estate to receive) without permission.

an export quota which must be an amount bearing to the crop basis of the estate the same proportion as the Indian export allotment bears to the total of the crop basis of all teastates in India. Section 15 deals with the right of an owner of a tea estate to which an export quota has been allotted, to obtain export licences from the Committee and the transfer of this right. The transferee of such a right may again transfer it to the owner of the tea estate but not to any other person Section 17 provides for the issue of a special licence where tea in respect of which an export licence has been or could have been granted has not been exported before the end of the financial year in which the licence was or could have been granted. Under section 19 no tea can be shipped or exported until the owner has delivered to the Customs-Collector a valid export licence or permit. Section 20 empowers the Committee to call for returns from the owner of a tea estate relating to the production, sale and export of tea produced on the estate. Section 22 authorises the Committee to collect certain specified fees including a licence fee for every export licence or permit issued by it at such rates not exceeding one rupee per thousand pounds of tea covered by the licence or permit.

Chapter III deals with control over the extension of the tea cultivation. Under section 26 one can plant ted in any land which was not 28 one can plant tea in any land which was not planted with tea on March 31, 1938, without a written permission granted by the Committee. This also applies to the replacing of tea areas by planting new areas. The total area of land in British India in respect of which permission may be granted must not, under section 27, exceed one-half of one-per cent, of the total area of land planted with tea on March 31, 1938. Permission will be granted to extend an existing area planted with tea only to a tea estate of which the total existing area planted with tea does not exceed 300 acres where the estate is owned by a limited liability company or 150 owned by a hinteet insoluty company or acres where it is owned by any individual proprietor. Under section 28 the Committee may grant or refuse the permission applied for and no Court can call in question any order made by the Committee in this respect. Section 29 empowers the Committee to grant permission to plant tea on land not planted with tea in special circumstances, i.e., where land planted with tea has become incapable of carrying tea or is compulsorily acquired. Section 30 permits the establishment of tea nurseries on land not previously planted with tea. Any applicant aggrieved by an order of the Committee under sections 28, 29 or 30 may under section 31 appeal to the Provincial Government within sixty days from the date of the order.

Chapter IV which deals with penalties and procedure prescribes punishments for breaches under the Act. The offence of making a false return or for obstructing inspection of a tea estate is made punishable with fine extending to one thousand rupees. Illicit outsivation of tea is made punishable with a fine of similar amount for the first offence and to a fine of five thousand

- 9. The Workmen's Compensation (Amendment) Act.—The present Act removes certain ambiguities and minor defects contained in the original Act. Under sub-section (1) of section 10 as amended, no claim for compensation will be entertained by a Commissioner unless notice of the accident has been given as soon as practicable after its happening and unless the claim is preferred before him within one year of the occurrence of the accident or, in case of death, within one year from the date of death. Sub-section 6 of section 11 is so amended as to include the case where the workman, although regularly visited by a medical practitioner, deliberately disregards his advice or instructions. Section 21 (2) as amended removes the difficulty so far caused in obtaining a transfer where no parties are present as in the case of a workman who dies in one province and his dependents live in another. The Commissioner may now order such transfer without the intervention of any party to the proceeding. Under the amended section 24 it is necessary for persons who are not legal practitioners or officials of registered trade unions or officials of insurance companies to obtain the Commissioner's permission to appear before him. Clause (i) in Schedule II now covers a lift or a vehicle propelled by steam or other mechanical power or by electricity. The following are included in the definition of workmen:—persons employed in the tapping of palm-trees or the felling or logging of trees or the transport of timber or the control or extinguishing of forest fires; persons employed in operations for the catching or hunting of elephants or other wild animals; persons employed in the handling of goods in a warehouse or market and persons employed in any occupation involving the handling and manipula-tion of radium or X-rays apparatus or contact with radio-active substances. Amendments made in Schedule III remove the condition that a workman who contracts compressed air illness or poisoning by lead tetra-ethyl should have served for the proceeding six months under the employer whom he served when the accident occurred. The following are added to the list of occupational diseases contained in Schedule III. Arsenical poisoning, pathological manifestations due to radium, radio-active substances and X-rays and primary epitheliomatous cancer of the skin.
 - 10. The Cutchi Memons Act.—This Act provides that in matters of succession and inheritance all Cutchi Memons will, from November 1, 1938, be governed by the Muhammadan Law. The Act has no retrospective effect as regards rights and liabilities already accrued or pending legal proceedings.
 - 11. The Hindu Womes' Rights to Property (Amendment) Act.—This Act removes certain difficulties in the interpretation of the original Act and has retrospective effect as from the commencement of the parent Act. It was the intention of the Act that the right of inheritance conferred on widowed daughters-in-law by the provisces to section 3 should not depend on the survival of a widowed mother-in-law. The words "leaving a widow" in section 2 however defeat this object. These words are therefore omitted by the present amendment. Section 3 (1) which is capable of interpretation as conferring a right on all the lineal descendants of the

- deceased, is re-cast and it makes it clear that the widow only is entitled to the deceased's property. A new section defining the expression "die intestate" is included. A person will be deemed to die intestate in respect of all property of which he has not made a testamentary disposition which is capable of taking effect.
- 12. The Durgah Khawaja Saheb (Amendment) Act.—This Act removes inconsistencies and anomalies in the original Act which was passed for the administration of the Durgah and the Endowment of the Durgah of Khawaja Moinud-Din Chishti at Ajmer. The amendments effected are mostly of a verbal character and are aimed at removing inconsistencies, grammatical faults and unworkable provisions.
- 13. The Sind Salt Law (Amendment) Act.—The Salt Law Amendment Act, 1925, which was passed to vest in the Central Government powers of control in respect of salt, was not brought into force in Sind. As a result at the commoncement of Part III of the Government of India Act, 1935, there were two versions of the Transport of Salt Act, 1879, and of the Bombay Salt Act, 1880, one in force in the Bombay Presidency excluding Sind and the other in force in Sind. The present Act makes the adjustments which are necessary to bring the two Acts as at present in force in Sind into accord with the provisions of the Government of India Act, 1935.
- 14. The Sugar Industry Protection (Temporary Extension) Act.—This Act continues the existing protection conferred in 1932 on the Sugar Industry in British India, for one year more, so as to enable Government's further proposals to be laid before the Legislature before March 31, 1939.
- 15. The Indian Coffee Cess (Amendment) Act.—Section 4 (1) of the Indian Coffee Cess Act, 1935, provides for the representation on the Indian Coffee Cess Committee inter alia of three persons nominated by the Coffee Growers' Association. This Association has since been dissolved and the Indian Coffee Cess Committee recommended that the power of nomination of members on the Committee should be transferred to the Coorg Planters' Association, the Mysore Planters' Association, Mysore. This Act gives effect to this recommendation.
- 16. The Indian Tariff (Amendment) Act.— This Act continues for a further period of one year the existing protective duty of twelve annas per maund on broken rice.
- 17. The Trade Disputes (Ameadment)
 Act.—The Trade Dispute Act was passed in 1929, originally for a period of five years, and was converted into a permanent measure in 1934. The present Act represents changes which appear to be desirable in the light of experience gained on its working and the opinions expressed upon it by the Courts of Inquiries appointed under the Royal Commission on Labour.

words "leaving a widow" in section 2 however defeat this object. These words are therefore sometised by the present amendment. Section 2 includes in the list of public utility services any water transport carrying passengers or tramway service if so declared by the Provin-3 (1) which is capable of interpretation as concial Government. Power plants are also inferring a right on all the lineal descendants of the

now includes any dispute or difference between | Central Government to prohibit all persons or employees and employers. Workman includes for the purposes of any proceedings under the Act in relation to a trade dispute a workman discharged during that dispute. Under section possessed of a prescribed permit, 4 a Court of Inquiry or a Board of Conciliation, having the prescribed quorum, may act not-withstanding the absence of the chairman or any of its members or any vacancy in its member. Section 7 makes punishable a partial lock-out by the employer without due notice and ensures that a threat of stoppage is brought to the notice of the Local Government. Section 10 provides for the appointment of Conciliation Officers charged with the duty of mediating in or promoting the settlement of trade disputes.

- 18. The Delhi Joint Water Board (Amendment)
 Act.—A scheme for the disposal of water borne sewage of the urban area of the city of Delhi is under execution. As water and sewage are intimately connected and it is desirable that a single authority should control both, thus incidentally securing administrative convenience and economy, this Act provides for the formation of a Joint Water and Sewage Board to take over the sewage system as a whole after the completion of the scheme. The Act also remedies certain defects which have come to notice in the working of the parent Act.
- 19. The Child Marriage Restraint (Second Amendment) Act.—Under section 6 the Court is empowered to issue an injunction prohibiting a marriage in contravention of the Act. Disobedience of the injunction is made punishable with imprisonment for a term extending to three months or with fine upto one thousand rupees or with both. No woman will be punishable with imprisonment.
- 20. Criminal Law Amendment Act.—This Act is aimed at penalising certain acts prejudicial to the recruitment of persons to serve in, and to the discipline of, His Majesty's Forces, Under section 2 whoever wilfully dissuades persons from enlisting in the Defence Forces or incite would-be recruits to commit acts of mutiny or insubordination after joining those Forces is liable to be punished with imprisonment extending to one year or with fine. No person can be prosecuted under this Act without the previous sanction of the Provincial Government. provisions as to dissussion from enlistment do not extend to comments made in good faith on the policy of Government in connection with the Defence Forces or to the case in which advice is given in good faith for the benefit of the individual to whom it is given or for the benefit of any member of his family or of any of his dependents,
- 21. The Indian Emigration (Amendment)
 Act.—By virtue of the definition of the word
 'Emigrate' in section 2 of the original Act the power given by section 13 (1) is restricted to persons under contract or assisted to depart. It has, however, been found that the lack of power to regulate the total flow of emigration for unskilled work, whether assisted or voluntary

- any specified class of persons from departing by sea from British India to any specified country overseas for the purpose of unskilled work unless
- 22. The Indian Aircraft Act.—Section 2 of the Epidemic Diseases Act, 1897, till April 1, 1937, empowered the Governor-General-in-Council when he was satisfied that India or any part of it was threatened with an outbreak of any dangerous epidemic disease and the ordinary provisions of the law for the time being in force were insufficient, to make or require or empower any person to take such measures and, by public notice, prescribe such temporary regulations as he deemed necessary. As a result of adaptions necessary in view of the introduction of the Government of India Act, 1935, this power was removed from the Governor-General-in-Council and located in the Provincial Government, for the province. The Indian Aircraft Act, 1934, contains a provision empowering the Central Government to make rules for the prevention of danger arising to public health by the introduc-tion or spread of disease from aircraft and for the prevention of the conveyance of infection or contagion by aircraft. This power, however, is subject to the condition of previous publication for three months and, therefore, affords no remedy against an emergent danger requiring immediate action. The present Act empowers the Central Government to take such special measures and to make temporary rules, without the condition of previous publication, for a period not exceeding three months at any one time, when there is danger of dangerous epidemic diseases being brought into India by aircraft. Provision is made for the continuance of these rules for a further period or periods of not more than three months in all.
- 23. The Indian Tea Cess (Amendment)
 Act.—The Government of Travancore levy cess on tea exported from that State at the same rate as that levied in British India and credit the cess proceeds to the Indian Tea Market Expansion Board, which so far did not contain a separate representation of Travancore tea interests. This Act provides for separate representation of the tea planters of Travancore on the Indian Tea Market Expansion Board.
- 24. The Employers' Liability Act.—Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead (a) the doctrine of common employment, by which the employer is not normally liable to pay damages to a work-man for an injury resulting from the default of another workman; (b) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation. The Royal Commission on Labour regarded both these doctrines as inequitable and recommended by a majority that these defences should be abolished. The present Act gives effect to this recommendation. Section 3 bars the defence of common employment and under section 4 a workman is not deemed to have undertaken and whether under contract or not, may operate any risk attaching to his employment unless the to the detriment of Indian communities overseas, employer proves that the risk was fully explained particularly in times of economic depression, to and understood by the workman and that he This act remedies this by empowering the voluntarily undertook it.

conditions have materially changed both in the attitude of the public towards the question of cruelty to animals and in the circumstances in which, in modern times, draught animals have to work. This Act remedies defects which were found to exist in the original Act and in particular makes more effective provision for checking the practice of phooka or doom dev which includes any process of introduc-ing air or any substance into the female organ of a milch animal with the object of drawing off from the animal any secretion of milk. Under section 3 if any person subjects an animal to unnecessary pain or offers for sale or without reasonable cause has in his possession any animal which is suffering pain by reason of mutilation, starvation, thirst or overcrowding or offers for sale any animal killed with unnecessary cruelty or abandons any animal in circumstances which render it likely that it will suffer pain, is liable to be punished with a fine upto fifty rupees or imprisonment extending to one month for the first offence and in case of a subsequent offence committed within three years of the previous offence with fine upto one hundred rupees and imprisonment extending to three months. Section 4 prescribes a penalty for overloading an animal. Under section 5 the penalty for practising phooka or doom dev is a fine upto five hundred rupees or imprisonment extending to two years and for a subsequent offence fine upto five hundred rupees and imprisonment extending to two years. The Court may order the payment of upto one-tenth of the fine imposed under this section to any person who has given information leading to the conviction—except a police officer or any officer of an institution for the pre-vention of cruelty to animals. Section 7 provides for the appointment of informaries for the treatment and care of animals in respect of Inspector and no Court inferior to that of a which offences under the Act have been commit-

25. The Prevention of Cruelty to Animals offence of batting or inciting animals to fight. (Amendment) Act.—Since the enactment of It is however not an offence if such fighting is the Prevention of Cruelty to Animals Act, not likely to cause injury or suffering to such not likely to cause injury or suffering to such animals and all reasonable precautions are taken to prevent it. Section 9 authorises a police officer to seize an animal and produce it for examination by the Veterinary Officer on which phooka or doom dev has just been or is being performed. Under section 11 a police officer is authorised to seize an animal which is severely injured and have it destroyed if in the opinion of the Veterinary Officer it is mortally injured. Section 13 gives a police officer power of seizure of an animal for examination where an offence against the Act has been or is being committed in respect of the animal. The Provincial Governments are empowered to make rules inter alia prescribing the maximum weight of loads to be carried or drawn by any animal. prohibiting the use of any bit or harness involving cruelty and requiring persons owning pre-mises in which animals are kept or milked to register such premises.

26. The Employment of Children Act.—The Twenty-third Session of the International Labour Conference adopted a Convention in which a special Article for India was inserted, fixing the minimum age at which children may be employed or may work in the transport of passengers, goods or mails by rail, or in the handling of goods at docks, wharves or quays, at thirteen years. This Act gives effect to the Article by prohibiting, under section 3, the employment of children under fifteen, in the aforesaid employments. Employment of children in contraven-tion of section 3 is made punishable with a fine upto five hundred rupees. Section 6 provides for the appointment of Inspectors for the purpose of securing compliance with the provisions of the Act. A prosecution under the Act cannot be instituted without the previous sanction of an Presidency Magistrate or a Magistrate of the ted. A fine upto fifty rupees is imposed for the First Class can try any offence under the Ac '.

India and the League of Nations.

India is a Founder-Member of the League of time brought into direct and formal contact Nations and enjoys in it equal rights with other with the outside world as a separate entity. Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conferences held in London in 1921, 1923, and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations." India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed hesponsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of public affairs" in India as is held by His Majesty the King-Emperor in Great Britain. And there are certain other respects in which India's Constitutional position the Empire is not the some set that in the Empire is not the same as that of the Self-Governing Dominions. India, for example, is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, governed the position which she entered when, as one of the States of the Empire, she joined in the Paris Peace Negotiations in 1918-19. India's membership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexe may become a member of the League. She is the only original member which is not self-governing, and in virtue of the purposes within widest possible limits. In restriction under para 11 of article I, on the was not legally possible for the Secretary of admission of members other than original State to relinquish his constitutional power of members, she will, so long as the present control, nor, consistently with responsibility constitution of the League endures, remain the to Parliament, could be delegate it: "But constitution of the League endures, remain that the present it has been his constant endeavour to restrict a syrcise to a minimum, to keep even its

She was treated as if she had attained to the same kind of separate nationhood as that enjoyed by the Dominions.

India's Attitude.

On questions coming before the League, India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917, recommending inter alia executive of the without the December and recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more Empire policy into line with her own on more than one occasion. In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Common. wealth. One interesting case occurred in 1920 at the Genoa Maritime Conference when Indian delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act. Nevertheless, as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929, showed, "It has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of and to allow to the Indian Government the in 1921, in Genoa Economic Conference in 1922, greatest possible freedom of action under the influence of their Legislature and of public oninion."

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred In some instances, it brings her into conflict with His Majesty's Government. In 1925, for example, at the conference on Oplum and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M.'s Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but, rather, with the consent of his colleagues of His Majesty's Government, he stands League, International Conferences, including Office: M. V. Venkateswaran, M.A., J.P.

existence as far as possible in the background, the Washington Conference on Naval Armament and the International Navai Conference held in London in 1930. India is also represented or several permanent League bodles, e.g., the governing body of the International labour office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. Sir Atul Chatterjee from 1921 onwards acted as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932. H. H. the Aga Khan was elected President of the League Assembly for the year 1936-37.

> In the Report of the Indian Delegation in 1933, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva, but Government have not yet seen their way to adopt the suggestion.

The Secretariat of the League of Nations has established a Branch Office at New Delhi in pursuance of its policy of promoting more aside and allows effective liaison with India. The Branch Office representatives of India the same freedom as is a point of contact between Geneva and Dominion Delegates would enjoy in controversy India, disseminating information to all interestwith the Delegates of Great Britain. India has ed in the League and its activities. In addition participated in all the Assemblies of the League, to all League documents which can be consulted in the annual session of the International at the Branch Office, it keeps for sale all publi-Labour Conference where because of her indl- cations of the League of Nations. Labour in India.

GROWTH OF THE LABOUR PROBLEM.

India is and always has been a predominantly agricultural country and over sixty-five perent. of her working population are dependent on the soil for their principal means of livelihood. Agriculture by itself, however, does not always afford, either to the agriculturals for to the agricultural labourer, the wherewithal for keeping body and soul together. It is necessary, therefore, for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door; but, the migration is generally always of a temporary character, and the agriculturist's contact with his land is seldom, if ever, permanently broken.

THE EARLIER FACTORY ACTS.

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in India. Employers were free to do what they liked with the result that Indian labour was exploited to the fullest extent possible. Hours of labour were inordinately excessive, rates of wages unduly low and other conditions of employment as bad as they possibly could be. There was no regulation of the age at which children could be employed; there were no periodical or weekly holidays; and there was no legislation to safe-guard factory workers from injury through accidents caused by entanglement with unfenced machinery in motion. With the growth of factory organisation in India and the rapid development of her industries, the minds of certain men, notably the late Mr. Sorabjee Shapurjee Bengali, C.I.E., however, began to be awakened to the existence of evils which by the standards of to-day would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strenuous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881. Act gave a limited measure of protection to children: firstly, by prohibiting their employ-ment in factories if they were under seven years of age and also in two separate factories on the same day; secondly, by restricting their hours of employment to nine per day; and thirdly, by requiring that they should be granted four holidays in a month and also rest intervals in accordance with rules to be framed by local governments. The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous if left unfenced and for the reporting of accidents. Owing to an almost complete lack of adequate inspection the 1881 Act became a dead letter in most provinces.

A landmark in the history of factory legislation in India was a memorandum on conditions of work in factories in the Bombay Presidency which was prepared by Mr. James Jones, an amounting in the aggregate to at least an hour Binglish Factory Inspector appointed by the

Government of Bombay in 1883 as the first permanent special inspector of Factories in India, Mr. Jones' memorandum was incor-porated by the British Chief Inspector of Factories in his report for 1886-87 and it makes harrowing reading. Most factories worked from daybreak to sunset, Sundays were usually working days and, if they were usually working days and, it they were holidays, they had to be used for cleaning the frames. There were no proper intervals for rest or meals. Both women and children were worked for excessively long hours. Ventilation in most factories was extremely bad and sanitation left much to be desired. Mr. Jones urged that pressure on the Government of India from the Home Government was necessary. March 1889, the Government of India, after consulting local Governments, forwarded to the Secretary of State for India, definite proposals for the modification of the 1881 Act. The main amendments suggested were (1) the reduction of the number of workers necessary to constitute a factory to 20; (2) the raising of the lower age of children to nine; and (3) the restriction in the hours of work for women to 11. At the suggestion of the Bengal Chamber of Commerce and the Indian Jute Manufacturers Association, another Factories Commission was appointed in 1890 to enquire into factory conditions in Bengal, Bombay, the North West Provinces and Oudh. On this occasion, female operatives were strongly opposed to any limita-tion of their hours of work if a similar limitation were not made for the hours of male operatives, and the Commission therefore recommended that the Government should have power to exempt any or all women from the clause limiting their hours to 11 daily.

THE FACTORIES ACT OF 1891.

It is not necessary for the purposes of this note to trace the various stages leading up to the passing of the 1891 Amending Act and it will be sufficient to state that, as finally passed, it represented a big advance on the Act of ten years before. The main features of the new Act were: (1) the reduction in the number of persons necessary to constitute a factory from 100 to 50 and the grant of the power to local Governments to notify concerns employing 20 or more persons as factories: (2) a compulsory stoppage of work for half an hour between noon and 2 p.m. for all operatives except those employed in factories working on the basis of approved shifts; (3) provision for weekly holidays; (4) the fixation of the lower and upper limits of the age of "children" at nine and 14, the limitation of their daily hours of work to seven and to day light, and the prohibition of their employment indangerous work; and (5) the limitation of the daily hours of work of women to 11, the restriction of their employment during 8 p.m. and 5 a.m., and the provision that if women were worked for the full eleven hours permitted by the Act they should be given rest intervals amounting in the aggregate to at least an hour recommendation of the Commission of 1890 the ranks of agricultural workers; and the for the exemption of any or all women from the inequality between the demand for and the operation of the regulation of their daily hours supply of labour naturally led to a marked of work and a wide exempting clause was added in the 1891 Amending Act. The Act was beginning of the twentieth century saw the in the 1891 Amending Act. The Act was regarded generally as the final word on the question of factories and His Excellency Lord Lansdowne speaking in the Legislative Council at the time said, "We believe that the effect of this measure will be to place factory labour in India on a proper footing and our Bill will be accepted here and at home not as a mere prelude to still further restrictions but a settlement as final as any settlement of such a question can be."

Apart from the mass meetings of workmen which were organised in the eighties by humani-tarian social reformers for the purpose of memorialising Government for improvement of conditions of work in factories, Indian factory labour was almost up to the beginning of the twentieth century, a silent and unorganised factor in the huge industrial organisation that was rapidly coming into being in India. Trade unionism was non-existent and there was no channel through which the Indian workman could ventilate his grievances and ask for their redress. The strike as a weapon of defence against oppressive conditions was aimost unknown and such industrial disputes as did occur soon terminated in favour of the employer owing to the unfettered power which he enjoyed of replacing all men who downed tools with blackleg labour.

INTRODUCTION OF ELECTRICITY AND THE GREAT PLAGUE.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined, for the time being at any rate, to worsen conditions in Indian factories. The first was the introduction of electricity for purposes of factory lighting and the second was the widespread epidemic of plague. By 1900, the majority of the cotton textile mills in Bombay City and almost all the jute mills in Bengal were lit by electricity, and by the end of that year the ravages of the great epidemic pointment of a Committee (the Freer-Smith Committee to a third to a half of its and conditions of work of persons of all ages normal strength. The immediate effect of these and sexes employed in factories. The Commover was a considerable increase in working hours. Many of the larger textile mills resorted to day and night working and cidence is not wanting that some mills worked to describe the resorted to day and night working and following the Berna Committee to twelve per day: working hours. Many working hours and night worked vidence is not wanting that some mills worked their operatives continuously for stretches of afteen to twenty hours per day. In Bombay October 1907 announced the appointment of the corners. The weaker of both the ast street corners. The weaker of both the continuously for stretches of as street corners. The weaker of both the notion and the jute mills, however, began to india, and their report, which was published in oction and the competition from the mills 1908 gives a comprehensive account of conditions at the time and of the defects of the existing legislation.

first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions; and wherever employers tried to force those conditions upon their workmen they were met by opposition. Early successes led to disputes of a more widespread and concerted character—disputes which resulted in a general all-round improvement in wages.

There was no further advance in factory legislation in India for twenty years after 1891. period 1891-1911 was one of changing conditions and of investigation. It was also marked by intense industrial activity in the country. There was a rapid expansion in road and railway construction with a collateral activity in building, engineering and mining. The number of factories rose from 656 in 1892 to 2,403 in 1911 and the average daily number of persons employed in these factories increased from 316,616 to 791,944 over the same period. The cotton and the jute industries showed top figures in this expansion and the demand for labour began to get more and more acute as years rolled on. "The result of the scarcity of labour was to increase the interest of the employ-ers in making conditions more attractive. The raising of wages was one step, the provision of houses was another....Inside the factory less was done to make Industrial labour attractive... It was an axiom with a number of employers that labour did not object to long hours in the factory, and that the actual hours of work were not considered excessive by those who worked."

At a large meeting of mill workers held Bombay City on the 24th September 1905 a demand was made for a twelve-hour day. Frightened at the prospect of being faced with a general strike in the cotton mills in the city, the majority of the Bombay mills agreed to work a twelve-hour day up to the 1st December and a thirteen-hour day thereafter. The Government of India drew up a draft Bill and sent it to local Governments for of adult workers to twelve per day; and, following the Berne Convention of 1906, also recommended that night work for women should be prohibited. The Home Government in October 1907 announced the appointment of a Factory Labour Commission. The Commission

The ravages caused by the plague were, however, not entirely devoid of some good effects.
The heavy mortality caused by it had thinned that some limitation in hours of work was

essential but the majority were opposed to any direct limitation. As far as women's hours were concerned, they proposed that the statutory maximum should be increased from 11 to 12. It is noteworthy that only one member (Dr. Nair) recommended a limitation in the hours of adult male workers to twelve per day and a continuation of the 11-hour day for women with less power to local Governments to grant exemptions. The findings of the Commission were circulated to all provincial Governments for opinions; and, in the light of criticisms received, the Govern-ment of India drew up a fresh Bill "to consolidate and amend the law regulating labour in factories."
This Bill was introduced in the Governor-General's Legislative Council in July 1909. In drafting the Bill, the Government of India followed the proposals made by Dr. Nair rather than by the majority of the Commission.

THE FACTORIES ACT OF 1911.

Want of space prevents us from recounting the various stages through which the Bill had to go before it was finally passed on the 21st March 1911. It naturally evoked considerable opposition from all quarters but this was not so strong as that which met the proposals of Government in the eighties and the inneties.

The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours was reduced. This was done in order to limit the spreadover. Children's hours in textile factories were reduced to six per day and more stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those employed in continuous process factories. A number of provisions were made for the health and safety of the operatives and several changes designed to make inspection more effective and to both prevent and punish breaches of the Act were incorporated; but, at the same time, wide powers were given to local Governments to grant exemptions. The 1911 Act was brought into force with effect from the 1st of July 1912.

THE ADVENT OF THE GREAT WAR.

Matters in connection with the administration of the Factories Act of 1911 had hardly begun to be regularised when the whole world was convulsed by the outbreak of the Great War of 1914-1918. Metaphorically, the whole world was in the melting pot and Indian labour went into it too. The large contingents of Indian troops which were sent overseas had to be supplied with clothing, rations and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and material to the various seats of war. Heavy demands were also being made by both belligerent and

for generations and she was not slow in seizing it. Much of her available arable land was put under cultivation, and there was an immediate and rapid expansion in every sphere of her industrial activity. Factories began to spring up everywhere; and all available means of transport were requisitioned for the carriage of men, beasts and goods to the ports and to the seats of manufacture. Indian labour was consequently faced with a more than capacity demand for its services. Local Governments were beseiged by employers with requests for relaxations of existing restrictions in hours and conditions in factories. The ranks of the factory inspectorate were thinned as a result of some inspectors having joined the fighting forces and the duties of factory inspection were entrusted to officers already overburdened with other work, All the good preparatory work which had been done during the two years following the coming into effect of the 1911 Act appeared to be going by the board—but only temporarily, because Indian labour was no longer that dumb and inarticulate part of factory plants which it used to be during the years preceding the outbreak of the war. If workers were asked to work for longer hours they demanded and secured higher rates of wages. They were also not blind to the fact that employers were making bigger profits than before. Prices of all commodities were, moreover, rising and Indian operatives, like others, began to feel that they were not able to make both There were, ends meet on prevalent rates. therefore, frequent demands for increases in wage rates—demands which were not always granted without strikes; but the few strikes which occurred were mostly of an unorganised character and were short-lived because employers rather than allow production to suffer by pro-longed stoppages of work reached compromises with their workmen by doling out small increases in wage rates at frequent intervals. Apprehensive, however, of their workpeople demanding a continuation of the higher rates after the war had ended, many employers all over India and particularly in the textile industry in the Bombay Presidency resorted to the device of granting wage increases in the form of war or dearness allowances over the basic rates of 1914-a practice which cotton millowners in the cities of Bombay, Ahmedabad and Sholapur and in several other centres are adhering to even to-day. In extenuation of their action in this matter employers referred to the sliding scale allowances dependent on cost of living indexes which were introduced in munition and other factories and establishments in Great Britain and many Western countries towards the end of the war.

One of the most vexed questions in Indian industry is that of wages and Indian employers will not grant increases in rates unless they are forced to do so. Wages in 1916-17 were in 1914, but at the same time, real wages (earnings 1914, but at the same time, real wages (earnings expressed in terms of sufficiency in relation to the cost of living) were in many centres and cases lower than in the pre-war year; and consequently, industrial workers were very little better off than they were before the war. At were also being made by both belligerent and the same time, however, the foundations for other countries for raw products. Here was the a better standard of life were being laid. Expoportanity for which India had been waiting lessive hours of work, however, still continued

to be the feature in all branches of industry and conditions inside the factories had worsened. Owing to the influx of large bodies of porsons into the towns, housing became hopelessly inadequate and rents soared to heights which forced several local Governments to pass legislation to control them.

THE AFTERMATH OF THE WAR.

The victorious and successful emergence of freat Britain, her dominions and her allies from the World War of 1914-1918 led the people of the British Empire, and particularly of India, to believe that the dawn of an utopia had at last arrived. Everybody expected that prices would fall, that there would be an ample scope of employment for all and that the end of the war would see the beginning of a long stretch of continuous prosperity for industry, trade and commerce. All these hopes were, however, destined to be blasted sooner than the worst pessimists could have foreseen. The end of the war saw an unprecedented epidemic in the form of influenza sweep over the face of practically the whole world. The ravages wrought by this new 'plague' were probably the worst in India and it was responsible for a total death roll of over eight million persons. Contrary to the expectations of the masses and also of many who should have known better, prices instead of falling rose more sharply than ever before-due, in a large measure, to the unprecedented depreciation in the curreacies of most European countries. Merchants and manufacturers all over the world had made phenomenal profits during the period of the war—thirteen large jute mills in Bengal alone paid dividends of 200 per cent. and over for the year 1918—and with the gradual closing down of munitions works and factories engaged in the manufacture of war materials, these merchants and manufacturers were looking for new fields for investment. Property valua-tions increased fivefold and more. The huge reconstruction loans raised by the victorious nations were subscribed several times over within a few hours of the lists being opened. Prices of industrial securities rocketed and there were still large amounts of liquid funds Industrialists available for further investment. therefore got together and floated big companies for transport services by rail, road, sea and air, for the construction of new mills and factories and for the exploitation of mineral resources. Hectic building activity was evident every-where and this was naturally followed by heavy demands for all types and kinds of labour.

Similar to the chance which Indian industrialists had secured at the outbreak of the war was the one which Indian labour secured at the end of it. The great influenza epidemic had left large gaps in the ranks of available labour especially as the age groups between 20 and 40 had suffered most heavily and a situation very similar to that which followed the great plague of the 'nineties was created; but on this occasion there were no auctions of mill workers at street corners because as the result of a country wide expansion in transport services labour had become much more mobile. Notwith-

| ded and were, in many cases, paid, Wages, in the more organised industries, however, lagged far behind the rapid rise in prices and real wages began to become appallingly low. The beginning of the year 1919 therefore saw the outbreak of industrial strife on a scale previously unknown. Although sporadic strikes had occurred prior to and during the war, strikes on any organised scale up to then were rare and the employers were not giving anything away unless they were absolutely forced to do so. Prices, however, were still rising and it was literally becoming almost impossible for the workers to meet even their most necessary expenditure on the existing rates of wages. Had employers then exercised greater vision and been a little more farsighted than what they were in the matter of granting adequate increases in wages themselves without being forced to do so, the history of the labour movement in India during the last twenty years, so far at least as industrial disputes are concerned, might have been entirely different. Employers, however, were deaf to the approaching roars of thunder and they had to pay the eventual penalty for their short-sightedness in this matter.

The war had done much to educate Indian labour in the conditions of work prevalent and the methods of agitation adopted in other countries. Conditions, particularly as regards working hours, which had formerly been accepted as inevitable, were no longer regarded as tolerable; and while trade unions, as they are understood in the West, were still almost unknown, the value of concerted action was being rapidly realised. A number of strike committees were formed and many large strikes of a fairly concerted character met with almost instantaneous success in several industrial centres in India. The idea of organisation for the purpose of securing concessions received a substantial measure of recognition everywhere and it was not long before some of the earlier strike committees formed themselves into trade unions similar to those which had been formed in the previous century in most European countries. These earlier unions were formed with two main objects in view: (1) increases in wages; and (2) reductions in hours of work. The first was an imperative economic necessity. The second had received considerable support from the Indian Industrial Commission which had been set up by the Government of India in 1916 'to examine and report upon the possibilities of further industrial development in India and to make recommendations with particular reference to new openings and to assistance by Government. In their report which was published in 1918, the Commission noted a growing opinion in India in favour of a ten-hour day and they recommended that the possibility of reducing the existing statutory maximum hours should receive further examination. There was a recurrence of the influence epidemic in the winter of 1010-190 and the way for the control of 1919-1920 and this was responsible for a total mortality in India of considerably over a million. mortanty in indu of considerably over a million. The acute shortage which had been created in the supply of available labour by the earlier epidemic was accentuated by the later one. This gave added strength to the labour organisations that were coming into being in the matter standing this, fancy rates of wages were deman- of wage increases and reductions in hours.

shortage of labour, were, however, to be temporarily solved by factors the operation of which nobody had forescen. The gradual demo-bilisation of the armies of the war and the closing up of the various munitions works had disbanded tens of thousands of both men and women who in anticipation of re-employment in the great industrial enterprises which were being floated everywhere had spent the savings which they had secured during the war. Pre-war indus-tries in the belligerent countries could not moreover, be re-organised at once. It was suddenly realised that resources would have to be husbanded and there was a perceptible decline in the purchase of commodities and the demand for manufactured goods. Production had necessarily to be eased off for stocks were accumulating. The spectre of unemployment loomed large. But, employers had learnt their lesson 78, the difficulty of securing workmen during periods of acute shortage of labour and they were not prepared to disband large bodies of their work-people. They were, therefore, not unwilling to consider reductions in hours of work. Some employers who had already reduced hours found that production far from having fallen off had actually improved. A new angle of vision came into being and the trail was laid for reforms of a world wide and far reaching character which were to be introduced in all countries as the result of the formation of the International Labour Organisation.

THE INFLUENCE OF THE INTERNATIONAL LABOUR ORGANISATION.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be "of special and urgent importance" but also brought into being the International Labour Organisation which was entrusted with the task of securing, as far as practicable, the observance of these principles. The duties of this organisa-tion which was to be controlled by a Governing Body consisting of members representing Governments, employers and labour from all countries of chief industrial importance, and from other countries by rotation, were to collect all possible information regarding conditions of employment in all countries and to present reports of such enquiries to the International Labour Conference which was to meet periodically. Each subject was to be discussed at first at one and later at two sessions. After a first preliminary discussion, the views of various Member States were to be invited on tentative proposals. The International Labour Office would then re-examine these proposals in the light of the re-examine these proposals in the light of the criticisms and opinions received and submit a final Report with a Draft Convention or Recommendation to the next Conference for a of the labour problem in India references have final discussion and decision. It was laid down frequently been made to the circularisation that it would be obligatory on all Member to local Governments by the Government of

The allied problems of excessive hours and the | States to introduce legislation in their respective countries to deal with matters covered by a Draft Convention but that it would be optional for a Member State to adopt a Recommendation.

THE WASHINGTON CONFERENCE.

In accordance with a provision in the Treaty of Versailles, the first International Labour Conference met at Washington on the 29th October 1919 and sat for a month. India, as an original member of the League of Nations, was among the 39 countries represented. Indian delegates were Sir Louis Kershaw and Sir Atul Chatterjee representing the Government of India, Sir Alexander Murray represent-ing Indian employers and Mr. N. M. Joshi representing Indian labour. The Conference was asked to consider proposals relating to a number of subjects including the eight hours day, unemployment, the night work of women and young persons, the employment of children, maternity benefits and industrial diseases. The Washington Conference adopted the Hours Convention, but as far as India was concerned. her delegates were able to impress the Conference that the adoption of an 8-hour day would be too revolutionary a change for the country and would never be accepted by Indian employers. The Conference therefore agreed to grant a special relaxation in the case of India and it was decided that a beginning should be made by the introduction of a 60-hour week in factories subject to the Indian Factories Act.

The ground for a reduction in factory hours had, however, already been partially prepared by the Government of India who, acting on the recommendations made in the matter by the Industrial Commission, had circularised all local Governments in June 1919 on the subject. The subsequent endorsement of a sixty-hour week for India by the Washington Conference received further support from the workmen themselves in the winter of 1919-20 which saw the recrudescence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reductions in hours of work. Concerted strikes in the cotton mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a ten-hour day in addition to the granting of higher wages. In March 1920, the Millowners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten. The rapid sequence of events in favour of a ten-hour day broke the back of all opposition to reduced hours of work in Indian factories and an easy passage for the necessary legislation was assured.

CREATION OF GOVERNMENT LABOUR DEPARTMENTS.

factory legislation and also to the independent action taken by the Government of Bombay in appointing Committees of Enquiry to examine certain phases connected with the conditions of work in factories in the Bombay Presidency. But apart from these and the examination of certain questions connected with labour by the Factories Commission of 1907 and the Industries Commission of 1916, there was Industries Commission of 1916, there was little co-ordination between the Centre and the Provinces in matters connected with labour, and there were no provincial or All-India en-quiries of a general character into industrial wages or conditions of employment in indus-trial setablishments. The participation of India in International Conferences and the increasing interest taken by the Indian public in questions connected with labour made it necessary both 1926 and 1931 made improvements of a minor for the Government of India and the Govern-character and no changes were made in any of ments of the more industrialised provinces not only to consider the question of the representation of labour in the central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions. The Government of India established a Labour Bureau in the year 1920 and the Governments of Bengal and Madras created special appointments of Commissioners of Labour in the same year. The Labour Bureau of the Government of India published a series of bulletins on certain phases of factory work but before its utility could be established the office was abolished in March 1928 on the recommendation of the Indian Retrenchment Committee. The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the Govern-ment of Bombay who created a Labour Office

- 1. The definition of the term 'factory' was extended so as to bring within its scope all concerns using power and employing not less than 20 persons. Local Governments were invested with powers to declare as factories concerns which employed not less than 10 persons.
- No child under 12 was to be employed in a factory. The hours of children between 12 and 15 were restricted to six per day. A rest interval of half an hour was to be given after four hours' work and employment in two factories on the same day was prevented.
- 3. Women's hours were restricted to eleven Acts were passed in 1923 and the Trade Unions per day and to sixty per week and their Act was passed in 1926 but the Ail-India Trade employment at night was totally prohibited Disputes Act was not passed till 1929. The

- India of the proposals in connection with between the hours of 7 p.m. and 5-30 a.m. except in seasonal factories in the fish curing and canning industries.
 - 4. Men's hours in all factories were restricted to eleven per day and to sixty per week.
 - All operatives were to be given a com-pulsory weekly holiday and provision was also made for the grant of a compulsory rest interval.
 - 6. Exemptions on defined principles were to be permitted. Provision was made for controlling excessive artificial humidification when injurious to the health of the operatives. Various other provisions dealing with the health and safety of the operatives were also incorporated in the new Act.

Subsequent amending Acts passed in 1923, the main principles laid down in 1922.

PROPOSALS FOR FURTHER LABOUR LAWS.

Indian labour was jubilant at the successes which it had gained as a result of the passing of the Factories Amendment Act of 1922. Further legislative proposals in connection with the grant of workmen's compensation in the case of accidents, for the regulation of working conditions in mines and for the registration of trade unions were under the consideration of the Government of India who were consulting local Governments on the proposals which they had formulated. Proposals to safeguard employers against strikes which were, as has been seen, becoming most disturbing to industry were also under consideration and nected with labour was taken by the Government of Bombay who created a Labour Office
in 1921. Further details in connection with
this office and other matters dealing with
Council, appointed an Industrial Disputes
Government administration of labour subjects
will be found in a special section towards the
end of this note.

Industry were also under consideration on the reality of the Provincial Legislative
commendations of the Provincial Legislative
Committee in 1922 under the chairmanship of
Sir Stanley Reed, editor-in-chief of The Times of
India "to consider and report on the practicability or otherwise of creating machinery for THE FACTORIES ACT OF 1922.

A Bill to amend the Factories Act of 1911

A Bill to amend the Factories Act of 1911

after setting down their views on various schemes of welfare which employers might adopt A Bill to amend the Factories Act of 1911 schemes of welfare which employers might adopt was introduced by the Government of India in the Legislative Assembly in March 1921 and of the life of their workpeople so as to make was passed into law in January 1922. The Amended Act was brought into effect from lat July 1922. The main provisions of the new law as it now stood were as follows:—

Indiana of the life of their workpeople so as to make the mended Act was brought into effect from lateral contents and less amenable to the lat a statutory tribunal on the lines of the law as it now stood were as follows:— Industrial Court created by the United Kingdom Act of 1919 should be set up in the Bombay Presidency: and that all strikes which could not be settled without Government intervention not be settled without Government intervention should be referred to this Court. The Government of Bombay, acting on the recommendations of this Committee, drew up a Bill on the subject which was introduced in the local Legislative Council in 1923-24. In the meanwhile, however, the Government of India informed the Government of Bombay that they themselves were proceeding with similar legislation of an All-India character and they requested the local Government to a handon their own measure. local Government to a bandon their own measure. The Workmen's Compensation and the Mines Acts were passed in 1923 and the Trade Unions

main features of these several pieces of labour. The workers of all mills in the city struck work. legislation will be described in the special The Government of Bombay appointed a sections dealing with these subjects.

THE TURNING OF THE TIDE.

Unfortunately for Indian labour, a period of acute depression set in in all industries towards the end of the year 1922. Some of the first tasks to which the Labour Office created by the Government of Bombay in 1921 had set itself were to compile a cost of living index for working classes in Bombay City, to make an enquiry into their standard of life by the collection of family budgets for representative working class families and to make an enquiry into wages and hours of work in the cotton mill industry in the Bombay Presidency. The cost of living index compiled by that office—the first of its kind in India—showed that except for a slight fall during the earlier months of the year 1920, prices had been steadily rising after the end of the war for the next two years. The peak was reached in October 1920. The annual average of the monthly index numbers (1914=100) for that year was 183. A gradual decline, however, set in from the beginning of the following year and the annual average for the year 1921 registered a fall of ten points on the figure for 1920. A further fall of nine points was registered in the annual average for the year 1922. The year 1923 opened with a sharp decline to 156; but for the next five years—that is, up to the end of the year 1927, the optimum monthly variation was within eleven points between 150 and 161. The Report of the Family Budget Enquiry conducted by the Bombay Labour Office showed the standards of earnings and expenditure of some two thousand representative working class families and single men during the years 1921 and 1922 but no comparable figures were availand 1922 but no comparable figures were available for any other year. The report of the cotton mills wages enquiry which was published early in 1923 showed that the real wages of cotton mill workers in Ahmedabad were thirty-three per cent, higher in 1921 than in 1914. The Ahmedabad Millowners' Association made the first organised post-war move in India for wholesale reductions in wages. A cut of 20 per cent. was announced with effect from the 1st April 1923. The strike of the Ahmedabad cotton mill workers which followed was cotton mill workers which followed was by far the largest and the most disastrous that has ever occurred in that city. It affected 56 out of 61 working mills, involved nearly 45,000 workpeople and resulted in a total time loss of nearly two and a half million man-days. It began on the 1st April and lasted till the 4th June. On that date a compromise was arrived at by the terms of which wages were to be reduced by 15% per cent, instead of by 20 per cent. Labour received a rude shock and it was felt that the turning of the tide had set in.

Cotton textile millowners in Bombay had sation, they were met demands for higher wages between 1917 and 1920 partity by the grant of dearness of food allowances and partly by the payment of an annual bonus of one month's pay dependant on annual bonus of one month's pay dependant on Government a constant, in 1924, the Millowners' Association, Bombay, decided that the profits for 1923 pressed before arr would not justify the payment of the bonus. In the wages,"

The workers of all mills in the city struck work. The Government of Bombay appointed a Committee of Enquiry under the Chairmanship of Sir Norman Macleod. Chief Justice of the Bombay High Court. The Committee's report was entirely against the workers. The Bonus Dispute Strike in Bombay in 1924 was by far the worst that had ever occurred in the country and resulted in a time loss of nearly eight million working days.

ABOLITION OF THE EXCISE DUTY ON COTTON MANUFACTURES.

The next big concerted attack by employers on wage rates in India was made in 1925 again by the millowners in Bombay City. The cost of living index remained more or less stationary but the cotton millindustry was passing through a period of severe and unprecedented depression and the Millowners' Association, Bombay, decided to reduce the dearness allowances by 20 per cent, with effect from the 1st September 1925. This decision, if it had been accepted by the workers would have meant an all round average out of about 12 per cent, in their earnings. They were not likely to take it lying down, but as is usual with strikes in India, no warning was given of the threatened strike, On the 15th September 1925, 53,249 workers from 15 mills suddenly downed tools and by the 6th of October there was a complete stoppage of work in all the textile mills in the city and island of Bombay. The Government of Bombay held several conferences with the representatives of both sides and several proposals and counterproposals were considered but neither of the parties appeared likely to give in. On this occasion, however, the Government of India came to the rescue of both the cotton mill industry and the labour employed in it by suspending, for the remainder of the financial year, the collection of the excise duty of 31 per cent, which had been levied on cotton manufactures in India for several years past. The Millowners' Association had given repeated assurances to both the Government of India and the local Government that the old rates of wages would be restored if the excise duty were abolished and the strike therefore virtually ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November. Each of the successive general strikes which occurred in the cotton mill industry in Western India between 1923 and 1928 was more severe in intensity than its predecessor and the strike of 1925 was no exception. It resulted in a loss of nearly eleven million working man-days to the industry and the workpeople lost considerably more than a crore and a quarter of rupees in wages. But, "the strike was a great victory for the workers and showed that, in spite of their illiteracy and inadequate organi-sation, they were able to take concerted action and to offer a stubborn resistance against any attack on their wages." At the same time, however, it is significant that "the employers did not give way until they had secured from Government a concession for which they had pressed before arriving at the decision to effect

It will have been noticed that so far prominence has been given only to the big industrial disputes that occurred in the textile industry in Western India, This should not be taken to mean that other industries and the other provinces in India were not troubled with industrial strife. As soon as Indian labour had realised the potential value of the strike as a weapon for securing redress of grievances. ing table:-

strikes began to get extremely frequent and the quinquennium 1921-1926 saw the outbreak of no less than 1,154 strikes in India involving nearly two million workpeople and causing a total loss of thirty-seven and a quarter million working days. Summary statistics for the main industries are incorporated in the follow-

Consolidated Statement of Industrial Disputes for the Quinquennium 1921-25.

Industries.		Number of disputes.	Number of workers involved.	Man-days lost
Cotton spinning and weaving		505	815,341	24,967,386
Jute		146	575,570	3,454,356

Tota	1	1,154	1,919,714	37,317,904

A PERIOD OF QUIESCENCE.

The two years 1926 and 1927 were, as compared with the quinquennium which has just been reviewed, a period of quiet consolidation of their respective positions for both the employers and the employed and also for Government who had completed a heavy programme of labour legislation. There was a slight revival in trade and employers after the bitter experience which they had had of disastrous strikes most dislocating to industry were content to allow sleeping dogs to lie as far as wages were concerned. Governments and employers had completed extensive industrial housing many employers had expanded their activities for the welfare of their workpeople and the cost of living index was steadily on the decline. The administration of the factory law had been improved by the 1922 Act and the avenues for evasions were so barricaded as to make breaches of the law most difficult if not impossible. Hours of work, as compared to those obtaining five years previously, were congenial and permitted of sufficient rest and also of some relaxation and recreation. Absences from work began to get more frequent. All these and other factors were conducing to a decided improvement in the standard of life and the conditions of employment of industrial labour. The chief Indian industries were however, still showing adverse balances in their profit and loss accounts and the shareholders were getting little or no return on the capital which they had invested in industry. The shareholders were consequently becoming somewhat restive, and harangues at the annual general to preach revolutionary doctrines of class hatred, company meetings by the more disgruntled of the uprooting of capitalism and the smashing of them were becoming frequent enough to be stable Governments.

noticed. The Indian Tariff Board (Cotton Textile Industry Enquiry) appointed in 1926 had also made a number of recommendations aiming at a more efficient conduct and management of cotton mills in India. The more progressive firms, thereupon, began to devise ways and means for improving efficiency and for securing greater production at less cost. The methods of rationalisation which had been successfully attempted in the West received a measure of studious consideration and three go-ahead firms of cotton mill agents in Bombay City —Messrs. E. D. Sassoon and Company, Messrs. James Finlay and Company, and Messrs. Killick Nixon and Company—decided to try out schemes whereby cotton mill workers would be asked to look after a greater number of spindles and more looms. A beginning was made at the Manchester Mill of which Messrs. E. D. Sassoon and Company were the agents. The attempt was at once met by a prolonged strike in that mill.

The advent of rationalisation in Indian industries synchronised with the entry of the principles of communism into the country and the formation of the Workers and Peasants' Party on models similar to those obtaining in Soviet Russia, Many communists secured appointments on the executives of several trade unions in India and they were not long before they made their presence on these bodies felt by inciting workers to go on strike on the most flimslest of pretexts. The immediate object of these communists was not so much to improve the condition of industrial workers as to cause prolonged stoppages of work in industry thereby sending batches of dissatisfied workmen back to their native villages

THE CLIMAX OF INDUSTRIAL STRIFE IN INDIA.

The year 1928 was one in which a handful of communist agitators in India secured a large measure of control over her industries through their almost complete domination over labour. They engineered large scale strikes in most industries and brought several to the verge of an almost complete standstill.

The most disastrous of the strikes which occurred in the year 1928 was that in the cotton mills in Bombay City and which alone was responsible for the loss of over twenty-two and a half million working days out of a total of over thirty-one and a half million lost to all Indian industries in that year. The direct cause of this disastrous strike which lasted from the middle of April to the beginning of October was the fear of unemployment created by the decision of certain millowners to introduce 'rational' methods of work in their mills.

APPOINTMENT OF BOMBAY STRIKE ENQUIRY COMMITTEE.

The strike dragged on until the 4th of October when the Government of Bombay convence a conference of the representatives of both sides under the chairmanship of the Hon'ble Sir Ghulam Huseln Hidayatallah. At this conference the representatives of the strikers consented to eall off the strike if Government would agree to appoint an impartial committee of enquiry to examine the various questions under dispute. The strike was accordingly called off as soon as Government announced the appointment of the committee under the chairmanship of the Hon'ble the Acting Chief Justice of the High Court of Bombay, Sir Charles Fawcett.

The deliberations of the Fawcett Committee asted for over five months and their report which was published on the 26th March 1929 still continues to be one of the standard works of reference on conditions of employment in the cotton textile mills in Bombay City. The Committee held that the proposals of the Millowners' Association for the standardization of wage rates and for the fixation of the numbers to be employed on different types of machines were in the main fair and reasonable and that while there was justification for the Association's proposal to effect a cut of 7½ per cent. in weavers' wages there were reasonable objections to be urged against its adoption.

The Committee also held that that part of the standardisation scheme which was called the "Rational" or "Efficiency" system and which aimed at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable. The Committee further held that the Association's proposals with regard to standard standing orders for the operatives about the conditions of their employment were, in the main, fair and reasonable.

On balance, the findings and recommendations of the Fawcett Committee were more favourable to the workers than to the employers. Other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, the East Indian and South Indian Railways, in the Fort Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore.

AN ACCUMULATION OF UNRE-DRESSED GRIEVANCES.

The widespread industrial strife of the year 1928 brought out several facts in connection with Indian labour prominently to the surface. The most important of these was that the workers employed in Indian industries had a large accumulation of grievances which required early examination and redress, if possible. A very large majority of the settlements of the disputes that had occurred in the decade following the end of the Great War were hardly 'settlements' at all if the word is considered in the sense of solutions acceptable to both sides, in most cases the workers had been beaten into surrender owing to the fear of unemployment consequent on their places being filled up by black-leg labour or were forced into submissiveness as the result of the complete exhaustion of their resources. Although the trade union movement had penetrated into most industries, it has not even yet, except perhaps on the spinning side of the cotton textile industry in Ahmedabad, covered the majority of the workers in any particular units or groups of units; and in no case had any union collected a sufficiency of funds to finance a strike. Very few of the existing unions had secured complete recognition by the employers concerned and in most cases the illiterate workmen had no level-headed persons to argue their cause with their employers.

LACK OF COMPREHENSIVENESS IN EXISTING LABOUR LAWS.

In an earlier section reference has been made of the three great plees of Indian labour legislation passed in the years 1922 and 1923; (1) The Factories Act of 1922, (2) The Indian Mines Act, 1923, and (3) The Workmen's Compensation Act, 1923. These Acts had conferred several benefits, privileges and advantages on Indian workmen; but as compared with similar plees of legislation in the other industrialised countries of the world, they were of an exceedingly limited scope and character. This was due to the fact that in treading new ground, the Government of India had necessarily to proceed with circumsucction and a measure of caution.

APPOINTMENT OF A ROYAL COMMISSION ON INDIAN LABOUR.

Reverting to the labour laws of 1922-1928, seven years' administration of these laws had brought several defects to light. Certain administrative defects had been rectified by Amending Acts but it was gradually elic that much of the legislation was of a very halting character and that it did not go far enough. Several trade union leaders who had attended

Advisers had availed themselves of the opportunity offered by their being sent to Geneva of making enquiries and studies of labour questions in European countries before returning to India. After their return to India, these leaders started newspaper and platform agitation for both reform and expansion of the existing laws. These demands coupled with the great industrial unrest prevalent in India at the time made a complete survey and investigation by an impartial body inevitable and in the middle of the year 1929 the Government of India announced the appointment, by His Majesty the King Emperor, of a Royal Commission on Indian Labour "to enquire into and report on existing con-ditions of labour in industrial undertakings and plantations in British India; on the health, efficiency and standard of living of the workers; and on the relations between the employers and on the relations between the employers and the employed; and to make recommendations." The late Rt. Hon. J. H. Whitley was appointed Chairman. The other members of the Commission were the Rt. Hon. Shrinivasa Sastri, P.C.; Sir Alexander Murray, Kt., C.B.E.; Sastr., P.C., Sir Alexander Murray, A.L., U.B.E., Sir Ibrahim Rahimtoola, K.C.S.I., K.B.E., C.I.E., Sir Victor Sassoon, Baronet; Sir Andrew Clow, Rt., C.S.I., C.I.E., I.O.S.; Dewan Chaman Lal, M.L.A.; Miss Beryl M. Le Poer Power, Deputy Chief Inspector, Trade Boards, England and Messrs. N. M. Josh), M.L.A., Kabeeruddin Ahmed, M.L.A.; G. D. Birla, M.L.A.; and John Cliff, Assistant General Secretary, Transport and Raliway Workers' Union, England, Mr. 8. Lall, 1.0.8., and Mr. A. Dibdin from the India Office, London, were appointed Joint Secretaries, and Mr. A. H. Green, Assistant Secretary. Mr. S. R. Deshpande, Assistant Commissioner of Labour, Government of Bombay, was appointed Statistician and Lt.-Col. A. J. H. Russell, C.B.E., Medical Assessor to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Contral and Provincial Governments, the railways and associations of the employees and the employeed left for England on the 22nd March 1930 to collect further evidence in that country. The Commission returned to India in the month of October of the same year and after completing that part of their tour which had been left unfinished in the previous winter, went to Delhi in November to draft their Report.

1929—A YEAR OF CROWDED EVENTS.

The year 1929 was a very momentous one in the history of the labour movement in India crowded as it was with events of prime importance. Early in the year there was extensive ance. Early in the year there was excessive rioting in Bombay City which lasted for several weeks. An Enquiry Committee appointed by Government found that the immediate cause of these riots was the inflammatory speeches made by extreme left wing labour leaders. In

ten successive sessions of the International Commission on Indian Labour. Mention has Conference as Labour Delegates or also been made of the passing of the Trade Disputes Act in that year. An Act amending the Workmen's Compensation Act was also passed by the central legislature and the Government of Bombay took the initiative in Government of Bombay took the initiative in provincial labour legislation by passing a Maternity Benefits Act providing for monetary compensation by factory employers to their women workers for loss of wages during periods immediately prior to and following confinement.

> The chief communist leaders had been arrested but their henchmen were not. Imbued with communist principles, these endeavoured to carry on the industrial strife of the year before. When a dispute arose in the Spring Mill in the month of April over the question of the dismissal of one worker, this was made a casus belli for the declaration of another general strike in the cotton mill industry. This strike, however, did not extend to all the mills in the city and island of Bombay as that of the previous year had done but still it was of a fairly general character involving 109,232 workers in 62 mills. It lasted from the 26th April to the 18th September and was responsible for a total time loss of nearly seven million working days. The Government of Bombay took advantage of the new Trade Disputes Act and appointed a Court of Enquiry under the chairmanship of the Hon. Mr. Justice Pearson of the Calcutta High Court to make a full investigation into the causes of the strike. The Court sat continuously for over a month and in their report which was published on the 16th September they came to the unanimous conclusion that the whole of the blame for the calling and the continuation of this strike rested with the Bombay Girni Kamgar Union. The moral effect of this report was so great that the Union called off the strike unconditionally on the day following its publication.

> Another important strike which occurred in India during the year 1929 was one of the employees of the B.B. & C. I. Railway's Loco. and Carriage Workshop at Dohad. The railway administration had transferred a number of operatives from their big workshops in Bombay to the new workshop which they had built at Dohad and had given them certain allowances on reduced rates of pay. The men demanded a continuation of the old rates plus Dohad a continuation of the cut taxes pure according to the cut they struck work. After the strike had proceeded for some weeks, the Government of India appointed a Board of Conciliation under the Trade Disputes Act and this Board upheld the workmen's claims.

SPLIT IN THE ALL-INDIA TRADE UNION CONGRESS.

The last important event in this year of crowded events was the split which occurred made by extreme left wing labour leaders. In browned events was the spirit which observed February all the ring leaders among the ranks in the Trade Union Congress at its tenth session of the Communists were arrested and sent to which was held in Nagpur in the month of Meerut for trial. References have already been lower to that year under the presidency made to the publication of the Report of the of Pandit Jawaharish Nehru. The Trade Union Bombay Strike Enquiry Committee and to the Congress was inaugurated in 1920 for two main announcement of the appointment of a Royal purposes: (1) to co-ordinate the activities of

the individual labour unions in India which till then remained inchoate and were unable to take concerted action; and (2) to recommend workers' delegates to the various sessions of the International Labour Conference. It remained the central organisation of the trade union movement in India for nearly a decade and most of the important unions in India were affiliated to it. The Congress met in a full-dress session once every year and discussed various leading questions connected with Indian labour. Early in 1929 the Bombay Girni Kamgar Union and the G.I.P. Railwaymen's Union-two organisations controlled almost entirely by communists-secured affiliation to the Congress. As the elections to the executive body of the Congress are conducted on the basis of the membership strength of the individual affiliated unions, the communists were able to capture a majority of the seats on the executive through the membership of these two unions and the Tenth Session was therefore two unions and the Tenth Session was therefore entirely dominated by the communist section of the movement. Resolutions were passed for the boycott of the Royal Commission on Indian Labour and the International Labour Conference, for the affiliation of the Congress to the League against Imperialism and for the appointment of the Workers' Welfare League, a communist organisation in England, as agents of the Congress in Great Britain. The passing of these resolutions marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by communist agents in India and brought to a head the question whether the trade union movement in India should be under the leadership of genuine trade unionists or of the votaries of communism. The moderate sections under the leadership of Messrs. N. M. Joshi, V. V. Giri, B. Shiya Rao, R. R. Bakhale and Dewan Chaman Lal seceded from the Congress and set up a separate federa-tion under the name of The Indian Trades Union Federation in order to co-ordinate the activities of non-communist trade unions in India. Further details in connection with these two All-India federations, their quarrels the further split in the Congress and the attempts made for unity resulting finally in an amalgamation of these two bodies at Nagpur on the 17th April 1938 will be dealt with in the chapter on Trade Unionism and Trade Union Law.

THE CALM AFTER THE STORM.

The third decade of the twentieth century and been a most momentum period in the history of labour in India crowded as it was with almost continuous industrial strife, the appointment of committees and commissions to enquire into and make recommendations in connection with the causes of this strife and the

men and such of their organisations as existed had been defeated most ignominously and the workers began to lose faith in their leaders, Banias and landlords were clamouring for the repayment of debts and it was becoming very necessary to put in as much steady work as possible. The schemes of standardisation of possible. The schemes of standarusation of wage rates which had been approved of by the Fawcett Committee had been temporarily shelved. This standardisation, even without a general cut in wage rates, would have reduced the earnings of several thousands of the process of lengthing out to workers in the process of levelling down to standard rates. On the other hand those of several other thousands of workmen would have been improved in the process of levelling up. But the poorer mills which were paying low rates of wages were naturally most disinclined to increase their wages bills and the Millowners' Association, Bombay, decided to allow sleeping dogs to lie. The annual averages of the monthly cost of living index numbers (1914=100) were 147 for 1928 and 149 for 1929. This annual average fell to 137 in 1930 and there was a further drop of more than 25 points in the average for the year 1931. Apart from a few alterations in piece rates of wages for new sorts and other minor adjustments, there had been no wholesale reductions in wage rates in any of the larger centres of the textile industry in India since the cut of 15 per cent, in the wages of the cotton mill workers in Ahmedabad in 1923 and with each successive fall in prices, real wages naturally improved. Apart from the question of the sufficiency of the existing rates for the maintenance of a decent standard of life, the wage rates prevalent in 1930 and 1931 did permit margins for wiping out old debts and as the employers made no general move in these two years to reduce rates, this period was one of comparative industrial calm for the whole country.

The Government of the Central Provinces and Berar followed the Government of Bombay by passing a Maternity Benefits Act in 1930. 1931, the Government of India appointed a Court of Enquiry under the Trade Disputes Act to enquire into certain questions affecting labour arising out of the large reductions which Indian railways were making in their staffs. This Court made certain recommenda-tions regarding the absorption of the retrenched men in other industries and for their re-employment when suitable opportunities arose in the future and also for the payment of a more generous scale of retirement gratuities. The workers on this occasion, however, had to accept the inevitable and they were not slow in re-cognising the elementary and cardinal principle that no organisation could possibly maintain staffs which were surplus to requirements. The extreme left wing in the leftist Trade Union Congress came to the conclusion in 1931 that connection with the causes of this strife and the | Congress came to the conclusion in 1931, that laying of the foundation stones for a first class | the Congress was not as revolutionary as what code of labour laws for the country. The prolonged and disastrous strikes of the years 1928 | form the All-India Red Trade Union Congress, and 1929—especially of the latter year in the | thus happened that instead of there being storm centre of India's principal industry—had one co-ordinating body at the apex of the completely exhausted the resources of the trade union organization in the country to workers. Both the work-

PUBLICATION OF THE ROYAL LABOUR COMMISSION'S REPORT.

The most notable event in the world of Indian labour during the year 1931 was the publication in the month of June, of the report of the Royal Commission on Indian Labour. The report is a document of first-rate importance dealing with almost every aspect of the labour problem in India and it contains many hundreds of in India and it contains many hundreds of recommendations covering a very wide field of subjects. The Report has been the lodestar of all the various pieces of labour legislation which have been placed on the Indian Statute Book since its publication; and it will continue to be the text-book for social legislation and labour welfare in India for many years to come

A s mmary containing the principal recommendations of the Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. this publication. The Government of India have published annually since 1932 reports on the action taken by the Central and Provincial Governments on the Commission's recommendations and these reports are on sale at the Government of India Book Depots at Delhi and Caicutta. Most of the Royal Commission's recommendations with regard to the expansion of the scope and the improvement of the existing Acts relating to conditions and hours of work in factories and mines, workmen's compensation and to the control and supervision of the labour which migrates from India to the tea and other plantations in Assam have already been implemented by amending or consolidating Acts. Acts amending the Trade Disputes Act in a minor particular and placing it permanently (the original Act had been passed for a period of five years) on the Statute Book were passed in 1932 and 1934. The Employers and Workmen's (Disputes). Act which had been passed as early as 1860 for the speedy determination of disputes relating to wages of certain classes of workers the construction of railways. employed on the construction of railways, canais and other public works and which had been almost a dead letter was repealed in 1932.

Acts to prevent the pledging of children and to facilitate the acquisition of land for industrial housing were passed in 1933. Legislation on the lines of the British Truck Act to control the desired less than the control to the desired less than the de the deductions which employers may make from wages in respect of fines and to provide from wages in respect of nnes and to provide for the early payment of due wages was passed early in 1986. Various other proposals for new labour legislation in connection with employers' liability (re: "common employ-ment" and "assumed risk"), extension workmen's compensation to agriculture and forestry, fixation of hours of work of dock labourers, allotment of seamen's wages, exemp-tion of salaries and wages from attachment, the shortening of wage periods, arrest and im-prisonment of industrial workers for debt and for the prevention of the besetting of industrial establishments by money-lenders for the recovery of debts, have been considered by the Government of India in consultation with the various provincial Governments and some of these provincial Governments and some of these resulted in the introduction of Bills in the legislature. It is most unlikely, however, that in individual sfilliated unit should take indepenal these proposals will result in legislation, dent action.

because very weighty objections were raised during circulation on the various practical difficulties which would have to be contended with in the administration of any laws that may be framed to govern these matters. the advent of Provincial Autonomy, however, it is more than probable that the history of future Labour Legislation in India will be of a Provincial character rather than central.

It is obviously impossible to attempt even a brief summarisation of the recommendations of the Royal Commission on Indian Labour here but information regarding such of the more important of them as have already been important of them as have already been implemented will be given in each of the various sections into which this note has been divided. divided.

BEGINNING OF A PERIOD OF LARGE WAGE-CUTS.

The sharp downward trend of prices which set in about the middle of the year 1930 continued till May 1933 when the cost of living index for working classes in Bombay City touched par or 100 (1914=100). Wages in most industries, on the other hand, had continued almost at the same high levels of 1929-30-in many cases rates early in 1933 were double or more than double those prevalent in 1914. Following the cut of about 15 per cent, in wages which had been effected in the Ahmedabad cotton mills in 1923, the cotton mill workers in that centre had submitted a demand for a restoration of the cut in 1928. The matter was referred to arbitration. Workers on the spinning side of the industry secured an increase of eight per cent and on the weaving side five per cent. The conciliation board appointed in connection with the Dohad dispute had decided in favour of the workers and against the administration of the B.B. & C. I. Railway. Employers, therefore, were beginning to feel that the public generally and impartial arbitrators and conciliators in particular were determined that the standard of life which Indian industrial workers had attained as a result of the hard battles which they had fought must be maintained. They were therefore very chary of initiating proposals for reductions in rates. The commencement of the year 1933, however, saw the beginning of a new wave of depression in Industry. Jute mills had already resorted to short-time working and several cotton mills and other factories were being compelled to close down. One firm of managing agents who controlled ten large cotton textile mills in Bombay City crashed and as a result of this crash all the mills under their control were compelled to stop work. Several of the mills under the control of another large firm of managing agents had to suspend work tem-porarily. The remaining mills were faced with two alternatives—(a) to reduce wages and so to lower coats of production, or (b) to close down. The Technical Wages Sub-Committee of the Millowners' Association, Bombay, to whom the question of the necessity for a reducActing on the recommendations made in the work of the Departmental Committee protein matter by the Bombay Millowners' Asso-tem and go back to the arrest of the thirty clation, the affiliated mills started adopting communist leaders early in 1929 on charges of individual measures in effecting reductions in rates by announcing varying cuts in the dearness allowances. Certain mills resorted to the device of closing down completely for a few months and reopening on reduced rates. tew months and reopening on reduced rates, At one stage during the year 1933 more than 50,000 cotton mill operatives in Bombay City had been thrown out of employment as a result of permanent or temporary closures of some mills and partial working in others. Many of these had gone back to their village homes but many remained in the city in the hope of out many remained in the city in the hope of securing employment either in their own or in any other mill which would start work. The unemployed workers were literally on the verge of starvation and they were consequently ready to accept work on any wages that were offering. It would have been fulle for the progretives in the working mills to attend operatives in the working mills to attempt a general strike because in a few cases where certain groups of workers preferred to leave their jobs rather than to accept reduced rates, their places were at once filled from the ranks of the hundreds of the unemployed who were cla-mouring for jobs. The success achieved by some mills in effecting reductions without strikes emboldened the rest to follow suit. Some of the earlier mills which had effected small cuts as a preliminary 'try-out' administered second larger doses when they saw other mills getting away with larger cuts and by the beginning of the year 1934 almost every mill in Bombay had effected substantial reductions in their rates of wages.

Towards the end of the year 1933, the Ahmedabad Millowners' Association, attempting to profit as a result of the successful experience of the Bombay Mills in the matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent, and an agreement was concluded early in January 1935 on the basis of a uniform cut of 6; per cent, subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs. 41-4-0 for 26 working days. In recounting the course of events in Ahmedabad those in Bombay have been anticipated by about a year,

INSTITUTION OF A DEPARTMENTAL **ENOUIRY INTO WAGE CUTS.**

The year 1934 in the world of labour in Bombay opened with an insistent demand by the more moderate labour leaders, particularly Mr. R. R. Bakhale, M.L.O., for an impartial enquiry into the wage cuts and unemployment in the cotton mill industry in the Bombay Presidency. The Government of Bombay decided that a departmental enquiry into the nature and the extent of wage-cuts and the extent of unemployextent of wage-cuts and the extent of unemploy-ment in the cotton textile industry in the whole of the Bombay Presidency, should be conducted by Mr. J. F. Gennings, C.I.E., C.B.E., Commissioner of Labour. It was unfortunate that whilst the Departmental Enquiry was in progress, the cotton mills in Bombay City were again affected by a prolonged strike of a semi-general character. There was also a general strike in all the cotton mills in Sholapur which lasted for over three months. In order to trace the causes of this strike we must leave

sedition and organised conspiracy to deprive the King of his sovereignty of British India.

THE FAMOUS MEERUT TRIAL

The trial of the thirty communist leaders in The trial of the thirty communist leaders in what is now historically known as the famous Meerut conspiracy case lasted from 1929 to 1932 when some of the prisonesh were released on bail pending final judgment. Judgment in the case was delivered at Meerut by Mr. Yorke, the Sessions Judge, on the 16th January 1933. One of the thirty accused died in prison, three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years, the convicted persons appealed and substantial reductions were made by the Allahabad High Court in the sentences passed by the Court in the scntences passed by the Sessions Judge of Meerut. Such of the communists as were acquitted and were subsequently released from jail made frantic efforts to regain their hold on trade unions, and actually succeeded in getting into some of the more important of them—notably the railway unions and the Bombay Girni Kamgar Union. Assisted by such of the extreme leftists as had not been all-India basis early in 1934 to call a general strike in all cotton mills in India. The partial strike in the Bombay cotton mills in April and May and the general strike in the Sholapur mills were almost entirely due to the efforts launched by this committee but with the exception of Bombay and Sholapur they did not meet with any appreciable measure of success in any other centre of the industry in the rest of India.

THE PUBLICATION OF THE REPORT OF THE DEPARTMENTAL ENQUIRY.

The report of the Departmental Enquiry conducted by the Bombay Labour Office was published on the 21st June 1934 and the strike in the Bombay mills was called off almost simultane-ously. This enquiry was perhaps the most comprehensive of its kind that had yet been undertaken in India into wages and conditions of work in the textile industry and the informa-tion and conclusions which it contained were the subject of an India-wide discussion on public platforms and in the press. The Departmental findings on the various questions referred to the Labour Office for enquiry were as follows :-

- Extent of Wage Reductions.—Wages in Bombay City were lower by 21 per cent, in April 1934 as compared with July 1926 and in Sholapur by 17 per cent. Wages in Ahmedabad had risen between five to six per cent. during the same period.
- 2. Question of Uniformity in the Reduc-tions.—The reduction in Sholapur was uniform in all mills but as the Bombay Millowners' Association permitted its Millowners' Association permitted its members to take independent action as they pleased, the extent of the cuts varied widely between mill and mill.

3. Extent of Fall in Cost of Living.— The cost of living had fallen in all centres. Taking July 1926 as 100, it fell by 29 points in Bombay City in April 1984. In Ahmedabad City, the fall in December 1983 as compared with August 1926 was 31 per cent, and in Sholapur there was a fall of 28 per cent, between February 1927 and December 1988

Position ve: Real Wages .- Bombay, April 1934 eleven per cent, higher than in in Sholapur 15 per cent. higher; and in Sholapur 15 per cent. higher; and its Effects

5. "Rationalisation" and its Effects on Work and Conditions.—That method of rationalisation which takes the form of asking operatives to mind more machines than formerly had made the greatest progress in mills in Bombay City. In Ahmedabad, rationalisation had been Ahmedabad, rationalisation had been particularly directed towards improving the efficiency and types of machines used. The effect of rationalisation on earnings varied from mill to mill. In the few cases where rationalisation had not been accompanied by wage cuts, the workers were getting about 50 per cent, more than they did before rationalisation was introduced; where it was accompanied by wage cuts the workers were not getting any more,—the extra rates for minding more machines being neutralised by reductions in wages. The effects of rationalisation on the conditions of work had been beneficial because the workers were either working a shorter day or their work had been rendered easier. The general effects of rationalisation, in so far as one was able to generalise, had been beneficial to the workers.

The publication of the report of the Departmental Enquiry was followed by several conversations between His Excellency the Governor of Bombay and the Hon'ble the General and Home Member on the one hand and the representatives of the Millowners' Association, Bombay, and representative labour leaders on the other, Association submitted to Government a simple scheme of standard rates for unrationalised occupations on time rates of wages for affiliated mills in Bombay City and they also agreed, in cases where the dearness allowance for weavers had fallen to less than 40 per cent. to raise this allowance to 40 per cent, after the coming into effect of the 54-hour week on the 1st January 1985.

BOMBAY PASSES A TRADE DISPUTES CONCILIATION ACT.

By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August 1934. This Act made provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible; and (2) for the appointment of the Commissioner of Labour as an exofficio Chief Conciliator to whom the Labour Officer could bring all cases in which he could

Although the functions not succeed. the Chief Conciliator were to bring about an agreement between two opposing parties, he came to be regarded almost as an industrial judge whose decision was mostly accepted by both the parties to a dispute. Mr. W. B. Gilligan, I.C.R., was the first Government Labour Officer to be appointed under the Act. When Mr. Gilligan went on leave in November 1985, he was succeeded by Mr. W. Pryde, I.P. Mr. Pryde went on eight months' leave early in April 1989 and was succeeded by Mr.M. P.La Bouchardiere. Mr. R. G. Gokhale, B. Com., is the Labour Officer of the Millowners' Association. During the period of nearly four years for which the Act has been in force, remarkable results were achieved and there has been little industrial strife in the cotton mill industry in Bombay City since the Act came into force in September 1934. The Bombay Trade Disputes Conciliation Act and the jurisdiction of the Labour Officer was extended to include glass and soap factories in Bombay City and the Bombay Suburban Area and also to textile factories in the Thana District with effect from the 1st March 1937.

The Bombay Trade Disputes Conciliation Act. 1934, will be repealed with effect from the 1st August 1939 when The Bombay Industrial Disputes Act, 1938, will be brought into opera-

INSTITUTION BY THE GOVERNMENT OF BOMBAY OF A GENERAL WAGE CENSUS.

By far the most notable event in the field of Government administration of matters connected with labour in India was the institution by the Government of Bombay, in 1934, of a General Wage Census to cover as many industries as possible in the Bombay Presidency. The Royal Commission on Indian Labour had recommended that before any machinery was set up for fixing minimum wages, complete surveys of wages and conditions should be undertaken for such industries in which there was a strong presumption that conditions warranted detailed investigation and that the results of these surveys should be the basis on which it should be decided whether the fixing of a minimum wage would be desirable and practicable. Until 1984 the Labour Office of the Government of Bombay had conducted three enquiries into the wages and hours of work of cotton mill workers in the Bombay Presidency for selected months in the years 1921, 1923 and 1925. Other wages enquiries of a limited character covered muni-cipal vorkers, peons in Bombay City and workers in a few selected printing presses in Bombay City. None of the other industries, especially the engineering, had been touched. No other province in India had attempted an enquiry into industrial wages and such information as was available on the subject consisted of a few figures of wage rates in some important occupations in selected units which are contained in some of the annual provincial administration reports on the working of the Indian Factories Act. The Government of Bombay felt that before any question in connection with the creation of wage boards for fixing minimum wages could be considered, it would be necessary to have accurate and reliable information on wages and conditions of work in as many industries as possible—both organised and unorganised. They accordingly instructed the Labour Office to first make a survey of wages and conditions in factory industries the first part of which should cover all perennial factories and the second seasonal factories.

Preliminary enquiries which had been conducted in representative factories during the year 1933 had revealed the existence of a bewildering variety of methods and periods of wage payment as between unit and unit and also the use of a variety of English, vernacular and local names for designating occupations. It was moreover felt that if results of any value were to be secured from a general wage census, it should cover all or as many units as possible; and that, in the absence of a Statistics Act, it would be necessary to secure the willing cooperation of as many factory managements as possible. It was also necessary to draw up uniform forms which would be equally applicable to all industries. With this object in view, an Assistant Commissioner of Labour (Mr. N. A. Mehrban, M.B.E., B.A., F.S.S.) visited every one of nearly 750 perennial factories in over 80 towns and villages in the Bombay Presidency between January and May 1934. All manufacturing processes at each of these factories were examined and with the assistance of technical experts in each industry, lists of standard occupational terms were drawn up for all industries. whole of the administrative, clerical and labour staffs at each factory were properly classified according to their correct occupational designa-tions and full instructions were left at each factory with regard to the manner in which the census forms were to be filled up. This first part of the census was for the month of May 1984 with variations to suit local conditions. The forms together with a general questionnaire containing over 60 questions covering all phases of wage payments, conditions of work and wel-tare, and standard lists of occupational terms were issued to all perennial factories early in the month of June and second and third visits were paid to almost every factory for the purpose of securing both uniformity and accuracy in the returns. It reflects great credit on the staff of the Labour Office that not one of the perennial working factories in the Bombay Presidency failed to submit full information.

The first of the series of the General Wage census reports covering the engineering trade was published in December 1935, the second covering the printing industry was published early in March 1936, the third covering all the textile industries (cotton, silk, wool and hosiery) in the Bombay Presidency was published early in May 1937; and the fourth covering the Oils, Paints and Soap; the Match manufacturing and fourteen other miscellaneous industries was published in May 1939. These reports contain a fund of most valuable information regarding wage rates, earnings and conditions of employment and they should be of the greatest possible value to both employers and the employed, to Government administrations, to conomists and to the public generally. Copies of these reports can be had from the Government Book Depot, Bombay or from the High Commissioner for India in London.

FIRST ASIATIC LABOUR CONFERENCE.

The year 1934 was another year of notable events for Indian labour. The first Asiatic Labour Conference attended by delegates from Japan, India and Ceylon was held at Colombo on the 10th and 11th May. Messrs. N. M. Joshi, Jamnadas M. Mehta, S. C. Joshi and W. Francis represented India. Dr. P. P. Pillai, Director of the Indian Branch of the International Labour Office and Dr. F. I. Ayusawa, a member of the International Labour Office staff at Geneva also attended the Congress. A constitution for the Congress was drawn up and several resolutions dealing with various aspects of the labour problem were adopted.

In the month of Augur', the Government of Bombay launched a prosecution against eight leaders of the textile strike of April-June on the grounds (1) that some of the demands made or formulated by the strikers were not in furtherance of a trade dispute; and (2) that the strike was designed to inflict severe, general and prolonged hardship on the community and thereby to compet the Government to take or abstain from taking some particular course of action. The accused were charged under sections 16 and 17 of the Trade Disputes Act, 1929, as being persons who incited others to take part in an illegal strike. The Chief Presidency Magistrate, Bombay, who tried the case, held that the strike was not illegal within the meaning of sub-section (1) of section 16 of the Act and acquitted all the accused on the 23rd October 1934. The Government of Bombay preferred an appeal against the decision of the Chief Presidency Magistrate and the appeal was admitted by the Bombay High Court. The Honourable the Chief Justice and Mr. Justice N. J. Wadia who heard the case, agreed with the findings of the Chief Presidency Magistrate and dismissed the appeal.

THE INDIAN FACTORIES ACT, 1934.

The Royal Commission on Indian Labour made several very important recommendations for substantial amendments of the Indian Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1926 and 1931, firstly, for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours; secondly, for the improvement of working conditions in factories; and thirdly, for a more effective observance, on the part of factory owners, of the requirements of the Act. The Government of India accepted most of the Royal Commission's recommendations and drew up a draft Bill for an entirely new Act and this was introduced in the Legislative Assembly on the 8th September 1933. It was passed into law at the summer session of the Assembly at Simla in 1934 and received the assent of the Governor-General on the 20th August of that year. The new Act was brought into effect from the 1851 anuary 1935.

Full details have been given in this note of the first Factories Act of 1881 and of the subsequent amending Act of 1891, of the 1911 consolidating Act and of the Amending Act of 1922. The Amending Acts of 1923, 1923 and 1931 did not trative difficulties. The main provisions of the in the fish curing industry, continues to be Indian factory law as it stands to-day are given allowed. below with notes regarding the new principles which were introduced by the 1934 Act.

- (a) Classification of Factories.—A distinction is drawn between 'seasonal' and 'perennial' factories. A factory which is exclusively engaged in cotton ginning, cotton or jute pressing, the decortication of ground-nuts or the manufacture of ground-nut oil, or the manufacture of coffee, indigo, lac, rubber, sugar (including gur) or tea is to be a seasonal factory, provided that a local Government may, by notification in the local official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The local Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.
- Age and Sex Groups .- Prior to the 1934 Act, factory operatives were divided into three age and sex groups: (1) adult males, (2) adult females, and (3) children of both sexes, i.e., persons over 12 and under 15 years of age. A fourth group of 'adolescents' has now been introduced. These are defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be chikiren.
- (c) Hours of Work.—The maximum limits of eleven hours per day and sixty hours per week laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to nine per day and 54 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.
- (d) Spreadover.—The principle of "spreadover", i.e., the limitation of the period of consecutive hours during which the daily limits of hours of work may be availed of by the owner or occupier of a factory was introduced in factory legislation in 1934 for the first time. The aprendover in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half continuous hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults and of sixteen and a half free hours in the case of children must include the hours between standard h
 7 p.m. and 6 a.m. for both women and
 children. The power to grant exemptions in a factory.

introduce any new principle of major importance, the case of women where technical reasons and were merely intended to remove administraction require that work should be done at night, e.g.

- (e) Artificial Cooling and Humidification .-The provisions incorporated in the 1922 Act with regard to the control of artificial humidification were expanded. A new principle was dovernments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.
- (f) Welfure.—The new Act made provision for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous substances; (2) for adequate shelter for rest in factories employing more than 150 persons;
 (3) for the reservation of suitable rooms for
 the use of children of women employed in factories employing more than fifty women; and (4) for the maintenance of adequate first aid appliances.
- (g) Rest Intervals and Holidays,-The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.
- (h) Overtime.—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a realization and the should be paid in all cases where a realization and the should be paid in all cases where a realization and the should be paid in all cases where a realization. Worker in a seasonal factory is required to work for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is required to work for more than fifty-four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. When a worker in any factory works on the weekly rest day, he is to be entitled in respect of the overtime worked to pay at the rate of one and a half times the ordinary rate of pay.
- (*) Certificates of Fitness for Children.— The 1934 Act gave powers to local Governments to make rules prescribing the degree of fitness to be attained by children and laid down that whenever such a standard has been laid down, no child failing to obtain it can be certified for employment in

- (j) Security of Factory Structures.—Another edition of the Indian Year Book. has been given to factory inspectors to call upon brought into operation with effect from the managers to carry out such tests as may be 20th May 1937 are as follows: has been given to factory inspectors to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety. Local Governments are further empowered to make rules for the furnishing, by factories, of certificates of stability.
- (k) Exemptions .- A frequent cause of complaint against the older Factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limited these powers and prescribed further that no exemptions were to be granted in respect of the provisions for spreadover, prohibition of night work and the limitations of weekly hours for women and persons under the age of sixteen years.

IANUARY 1935 TO MARCH 1937.

The year 1935 opened with the Government of Bombay adopting a new angle of vision with regard to industrial disputes. The attitude of both the Central and the Provincial Governments towards industrial disputes in India during the previous fifteen years was one either of laissez faire as long as law and order were maintained or of interference only in such cases where particular disputes resulted in breaches of the peace. Compared to the total number of strikes which had occurred in the country, the number of cases in which committees of enquiry had been appointed to carry out investi-gations and to submit reports or in which official conciliators had taken the trouble to bring about settlements which would be acceptable to both parties was very small indeed. But, the success which met the efforts of the Labour Officer appointed under the Bombay Trade Disputes Conciliation Act for the textile industry in Bombay City was at once apparent and the Government of Bombay, emboldened by this success, were most anxious to try out the principle of conciliation in industries other than the textile and to bring about settlements which would make for industrial peace of a more enduring character. With this object in view, the Bombay Government instructed their Commissioner of Labour (who is also ex-officio Chief Conciliator under the Bombay Trade Disputes Conciliation Act) to attempt conciliation in cases where he thought that Government intervention would be of value. The officials of the Labour Office have successfully intervened in several disputes and have been able to secure agreements acceptable. to both sides.

THE PAYMENT OF WAGES ACT.

Perhaps the most advanced and difficult piece of social legislation attempted in India is the Payment of Wages Act which was passed by the rayment of wages Acc winds was part of the Manager of the Arvind Mills appealed against note on the history of this piece of legislation these decisions and the appeals were heard by will be found at pages 503 and 504 of the 1938-39 Mr. I. C. Munsiff, Assistant Judge, Ahmedabad.

- (a) Scope of Application .- The Act in the first instance, applies to factories and railways but local Governments are empowered to extend it to tramway or motor omnibus services; dooks, wharves or jettles; inland steamer vessels; mines, quarries or oil-fields; plantations; and any other class of workshops or c. ablishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.
- (b) Wages.—'Wages' for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract & employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed, or otherwise, to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include travelling allowances, employees' contributions to provident funds, gratuitles payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

Bonuses offer a wide loophole to employers to evade limitations in respect of fines because if the granting of bonuses were permitted there would be nothing to prevent an employer from setting apart substantial portions of wages as bonuses to be paid conditional on certain standards of conduct, efficiency and attendance being attained. If a workman failed to attain the specified standards, he would lose the bonus or in other words he would be fined to that extent. It was necessary, therefore, for the Government of India to so amplify the definition of the term "wages" as to cover all bonuses. All the provincial Governments in India were, however, not quite clear whether the term "wages" included "bonuses" or not. The wages included bonuses or not. The Government of Bombay took the lead in the matter by notifying all factories and concerns to which the Act applied that in all cases where bouless were paid for good attendance, good work, good production or matters of that kind, such bonuses became payable whether the conditions governing the earning of the bonus were fulfilled or not. Certain mills in Ahmedabad, however, continued the payment of these condi-tional bonuses and in June 1938 the Inspector under the Payment of Wages Act, Northern Division, filed two applications against the Manager of the Arvind Mills for making illegal deductions from the wages of some employees of the mills in the shape of good attendance and quantity bonuses. Mr. I. T. Almoula, City Magistrate of Ahmedabad held that such bonuses were wages and decided against the Arvind Mills in both the cases and directed that the deductions should be refunded to the workers. The Manager of the Arvind Mills appealed against

Judgment in the cases were given on the 17th April 1939. Mr. Munsiff held that the magistrate's interpretation was reasonable and there was no reason to interfere with it. Both the appeals were dismissed with costs.

- (c) Wage Periods.—No wage period shall exceed one month. (Amendments moved by labour members to reduce this to a week and a fortnight were defeated), and all wages are required to be paid in coin and/or currency notes.
- (d) Time of Payment.—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.
- (e) Permissible Deductions.—Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for oustedy, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over-payments of wages, for income-tax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative socioties and on orders made by courts of law. Deductions are also permitted in respect of such amenitics and services supplied by the employer as the Governor-General in Council or a local Government may, by general or special order, authorise. The Act does not permit an employer to make deductions from wages in respect of the value of material damaged in the process of manufacture and to hand over the same to the employee concerned. Such a system was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them.
- (f) Fines.—No fines are to be imposed on children, s.s., persons below the age of fifteen years. No fines may be imposed save in respect of such acts or omissions as have been exhibited in notices which have recalled the approval of the local Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period shall not exceed half an anna in the rupes of wages for that wage period and no fine can be recovered in instalments or after the expiry of 6 days from the day on which it was imposed. All fines are to be recoved in prescribed registers and all realisations from fines are to be expanded on objects beneficial to the workers. Local Governments have been empowered to make ruses in connection with most of these matters.

- (q) Deductions for Absence from Duty.—
 Deductions from wages for periods of absence from duty should be pro rata and should not bear a larger proportion than the period of absence bears to the period of duty (i.e., if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7): provided that "subject to any rules made in this behalf by the local Government if ten or more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or impliedly by the terms of their service) and without reasonable cause, such deduction from any such person may include such amount not exceeding his wages for eight days as may by any such contract or terms be due to the employer in lieu of due notice." By an amending Act passed early in 1937 an explanation has been added to the Section dealing with this matter which to the section deating with this instead while be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work.'
- (h) Deductions for Recovery of Advances.—
 Recovery of an advance of money given before
 employment bogan is to be made from the first
 payment of wages in respect of a complete wage
 period, but no recovery is to be made on
 advances given for travelling expenses; and
 recovery of advances of wages not already
 earned are to be subject to rules to be made by
 local Governments.
- (i) Contracting-Out.—No contracting-out is permitted.
- (f) Procedure.—Local Governments for empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Fensities have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences under the Act.
- (k) Administration.—Inspectors of factories are to be responsible for the administration of the Act as far as factories are concerned and powers are reserved to the Governor-General in Council and to local Governments to appoint such other persons as they think fit to be faspectors for the purposes of this Act for railways.

C. P. UNREGULATED FACTORIES ACT, 1937.

The Legislative Council of the Central Provinces and Berar passed an Unregulated Factoria Act early in 1937. This Act seeks to regulate the labour of women and childrem and to make provision for the welfare of labour in factories to which the Factories Act, 1934 does not apply, "Unregulated Factory" has been defined as any place wherein fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934 does not apply and wherein the following industries are carried on :—(4) bidi making, (4) shellac manufacture, and (46)

leather tanning." A "child" has been defined as a person who has not completed his forteenth year. The provisions with regard health year. The provisions with regard health and safety, notices and registers, penatics and procedure closely follow the similar provisions in the Factories Act. Children's hours are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and working in any unregulated factory to nine per day are except between 8 a.m. and noon, and 1 p.m. and working in any unregulated factory to nine per day are except between 1 p.m. and no mine per day are except between 1 p.m. and no mine per day are except between 2 p.m. and no mine per day are excep

is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of alx consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sun-

LABOUR UNDER THE NEW AUTONOMOUS PROVINCIAL GOVERNMENTS.

With the advent of the new reforms under the the independence of the worker, places him in a overnment of India Act, 1935, full provincial difficult environment and creates social and tonomy was established in all Provinces in political problems of a peculiar and complicated Government of India Act, 1935, full provincial autonomy was established in all Provinces in India with effect from the 1st April 1938. The Indian National Congress which is the largest, the most influential and the most well organised political party in India contested most and won the majority of the seats for the Legislative Assemblies in the Provinces of Madras, Bombay, the United Provinces, Bihar, the Central Provinces and Orissa; but, for reasons set out elsewhere in this volume, it refused to accept office forthwith and interim ministries had to be formed in these Provinces. These interim ministries, however, resigned in July 1937 and full Congress Ministries were formed in all these Provinces in that month. The Labour Policy of the Indian National Congress, as set out in its election manifesto is "to secure to the industrial workers a decent standard of living. hours of work and conditions of labour in conformity, as far as the economic conditions in the country permit, with international standards; suitable machinery for the settlement of disputes between employers and workmen; protection against the economic consequences of old age, sickness and unemployment; and the right of workers to form unions and to strike for the protection of their interests." The earlier reco-lution of Congress on fundamental rights, generally states in addition, that "the state shall safeguard the interests of industrial workers" and makes special reference to women workers and children. During the last two years, this policy has been amplified in some of the Congress Provinces either by the issue of Press Notices outlining Government's policy in respect of the industrial worker or by reference to that policy in public speeches made by the various Ministers absence that he was rectained. in charge of the Labour portfolio. For example, in addressing a meeting of the representatives of the workers on the 19th February 1988, the Romourable the Minister for Finance in the Central Provinces declared that "the Congress Policy in regard to labour will be uniform in all Congress Provinces and it will be the aim of the Congress to secure you your rights without any struggle as far as possible." The most comprehensive statement with regard to this policy is contained in a press note issued by the Government of Bombay in August 1937 from which the following more important passages are reproduced below:---

"Government are aware that they are in a special sense responsible for the welfare of the

character..... This Government has therefore accepted it as its duty to endeavour to work out this programme (as set out in the Election Manifesto) using all the means at its disposal. Government will try to adjust the social and economic mechanism in such a way as to assure to the worker the satisfaction of at least his minimum human needs, security of service, provision of alternative occupations in periods of inevitable unemployment and maintenance during periods of unavoidable incapacity for work. It is also an acknowledged obligation of Government to secure working and living conditions which are favourable to the worker's physical and moral health and to ensure for him opportunities for the advancement of his status and a full measure of freedom of action consistently with his obligations to industry and society. The pace at which a programme to achieve these ends can be prosecuted will depend upon various factors foremost among them being the co-operation of the working classes and of the employers, the state of the industries concerned and economic conditions generally.

"Government are examining the possibility of devising measures for setting up minimum wage fixing machinery to meet special require-ments, for promoting the provision of better housing conditions, for control of house rent in cities and for the relief and avoidance of working class indebtedness. With regard to industries and industrial centres which fail to provide a living wage to the employees, Government have decided to institute exhaustive enquiries with a view to determining how far wages in these cases fall short of the minimum budgetary needs of the workers, to discover what circumstances are responsible for the inadequacy and to ascer-tain the ways and means of improving wages to a satisfactory level.

" For the protection of the industrial population, Government visualize the development of a comprehensive system of social insurance..... Government have under their consideration the feasibility of legislation for leave with pay during periods of sickness. It is hoped that the action taken in this direction would pave the way for a scheme of sickness insurance.

"Government contemplate 8.D extension and improvement of the Factories Act in several directions. Provisions of the Act industrial worker. The process of industrialisa-tion, which has gone furtherest in this Presi- and spreadover of the hours need amendment, deepy as far as India is concerned, takes away Satisfactory dining accommodation and adequate medical aid will be made a legal obligation. The Commerce and Labour to representatives of the position regarding the maximum hours of work Press in enterties and Labour to representatives of the position regarding the maximum hours of work Press in enterties. He stated that some will be reviewed. Government find that some of the in ortant items which the Government of regulation of night-shift work in general will Bengal were considering for the amelioration have soon to be considered.

"With regard to trade disputes, Government are determined to pursue an active policy with a view to maintaining industrial peace in the Presidency, endeavouring all the time to see that the workers obtain a fair deal. It is the intention of Government to promote legislation aiming at the prevention of strikes and lockouts as far as possible. The basis of this legislation would be the requirement that no reduction in wages or other change in conditions of employment to the disadvantage of the worker should take effect till they have had sufficient time and opportunity for having the facts and merits of the proposed change examined and all avenues of peaceful settlement of the dispute explored either through the channel of voluntary negotiation, conciliation, or arbitration or by the machinery of the law. A corresponding obligation would rest on the workers in respect of demands on their behalf

"While Government propose to do all that is practicable for the amelioration of the conditions of the working classes, they are convinced that no legislative programme can be a substitute for the organised strength of the working class and till organisations of workers, run on genuine trade union lines grow up in the various fields of employment, no lasting good can accrue. Government are therefore anxious to assist in removing real hindrances in the way of the growth of labour organisations and to promote collective bargaining between the employers and the employees. Means will be devised to discourage victimization of workers for connection with a labour organisation and participation in legitimate trade union activity.

"In the sphere of education, Government realise that the working class has its special needs and that illiteracy in its case constitutes a very serious handicap to itself and a grave danger to society. The educational policy of Government will therefore be designed to meet these special requirements. Government's policy of prohibi-tion has also a special bearing on the well-being of the industrial community and it is Government's intention to select important industrial towns for the early application of this policy.

"Government have in mind the need and utility of statistical and other information for the proper discharge of their functions in these and other matters. The Government Labour Office is well equipped for the purpose. Government are considering the advisability of extending the scope of the work of the Labour Office and of facilitating the work of collection of statistics by suitable legislation.

of labour were the establishment of industrial tribunals, employment exchanges, decasualisation of labour, schemes for health insurance, adequate housing, regulation of employment in shops, conciliation of debts, pensising of illegal gratification and the institution of equities into conditions of living by means of collecting family budgets with a view to ascertaining whether it would be possible to introduce minimum wage fixing machinery and schemes of unemployment insurance. With regard to the policy of the Government of Bengal towards trade unions and the question of their recognition by employers, the Commerce and Labour Minister passed some very cogent and opposite remarks. He said :-

"It has been suggested that my policy of encouraging trade unions and giving recognition to them is merely a subterfuge to destroy the trade unions of the red flag. The question of subterfuge does not arise. I do not consider the so-called trade unions of the red flag to be genuine trade unions at all. I would welcome the flag oft he labourers whether it is red, white or blue so long as it is the flag of a genuine labour movement, but when the red flag is invariably coupled with revolutionary slogans, and by a ferocity and a hatred which is undermining the very foundations of the social structure, when it is almost invariably coupled with incitement to violence either overtly or covertly, it is impossible for me to consider it as the flag of a genuine labour movement until its sponsors enter the field as responsible labour leaders and not as politicians exploiting labour for personal, political or revolutionary motives. Hitherto the trade unionism of that flag has been nothing else but the creation of a conglomeration of workers for fighting employers on the basis of class warfare and disseminating class hatred. I wish to make it clear that I will under no condition give the slightest encouragement or privilege to any communist organisation, with its anti-God, anti-religious campaign and its appeal to hatred, violence and insurrection on a mass scale and I am sure that in this pronouncement I have the support of the vast majority of the thinking public..... A trade union that advises lightning strikes or does not formulate its demands or acts in an immoderate manner. or makes obviously extravagant or stupid claims, that makes no attempts to settle disputes, that discards offers of mediation and conciliation, is obviously not a genuine trade union.... therefore encouraging the establishment of sound trade unions and giving them recognition in accordance with the principles I have outlined I shall insist on fair-play on either side. Re-cognition will confer on the unions valuable rights. I will expect the trade unions to act in a responsible manner; if they do not do so, I shall be under the painful necessity of withdrawing recognition. I would expect employers to give the representations of the trade union In Bengal, where a popular Ministry was formed with representatives from the Projation of the Mullim League, the Independent Hindu and the Independent Muslim parties, the policy of the Government with regard to labour is from destructive forces. If they do not do so, contained in a statement made by the Honour-label parties of the Department of public opinion for support."

AUGUST 1937 TO JUNE 1939.

We have during the course of this brief survey of the growth of the Labour Problem in India made an endeavour to mark the outstanding milestones in the development of the growing consciousness of their rights among the toiling masses of the country. This development has never been so rapid as that which has taken place during the last two years since the advent of Provincial Autonomy. The Governments of Bombay, Bihar, the Central Provinces and Berar and the United Provinces appointed Committees of Inquiry to examine existing levels of wages and conditions of employment and to make recommendations. In the case of Bombay and the C. P. these enquiries were to relate to labour employed in cotton textile mills. In the United Provinces and in Bihar, labour in all industries was to be covered. The Government of Madras, following a pro-longed strike of cotton mill workers in Colinbatore, appointed a Court of Inquiry under the Indian Trade Disputes Act. Fortunately for labour all these various enquiries were conducted during a period when the textile industries in India were, after a fairly prolonged period of depression, showing signs of revival owing mainly to the Sino-Japanese war. Prices of raw products had fallen during the latter half of 1937. The margins between costs of production and selling prices had widened to the advantage of industry and it was consequently possible for employers to accept the recommendations made by various Committees and Courts of Inquiry and Boards of Concillation for increases in wages and the improvement of conditions of work. These acceptances were, however, not made entirely by employers of their own free will. In all cases the Governments concerned issued resolutions and notifications accepting such of the recommendations made by the Committees which they concurred in and recommending the adoption of such recommendations by the employers. It was obvious that non-acceptance of the recom-mendations made would be followed by legislative coercion if necessary.

At the moment of writing (June, 1939) the final reports of the Bihar and the Bombay Committees were not ready for publication. During the year 1938 the Government of Bombay put through the Bombay Legislative Assembly after a record debate of nearly 150 hours going over 33 days, their Bombay Industrial Disputes Act. They also issued to the various interests concerned for opinion draft proposals for the conditions to be fulfilled for the recognition by employers of unious of their workers; for the grant of holidays with pay during periods of sickness; and for the regulation of hours of work, rest periods and the grant of holidays in commercial offices, shops, lotels, theatres, cinemas, etc. As far as the last is concerned, the Bombay Shops and Commercial Establishments Bill of 1939 was introduced in the Bombay Legislative Assembly by the Hon'ble the Prime Minister on the 17th April 1939 and received support from all sections of the House. Legislative proposals for the establishment of Employment Exchanges in the more important industrial centres of the Province are also under the consideration of Government.

There has been a spate of activity for legislative measures for the amelioration of labour conditions in other provinces as well. Both the United Provinces and Bengal enacted legislation during the year 1938 for the payment of maternity benefits. In the Central Provinces and Berar bills have been published (1) for the collection of statistics; (2) for amending the Indian Factories Act, 1934, to provide for the registration of all factories and for the payment of registration fees in a manner to be prescribed by Government; and (3) to make provision for relief or benefits to workers in industrial occupations who are rendered unemployed and consequently destitute. Measures for regulation of hours of work and conditions of employment in shops, on lines similar to the bill introduced in Bombay, are contemplated in the United Provinces and in Bengal. The Government of Assam have durfted a Bill for the freedom of movement of tea garden labourers in that Province. The Government of the United Provinces introduced a Trade Disputes Bill in the local Legislative Assembly but withdrew it later on with a view to the introduction of a fresh Bill on the lines of the Bombay Industrial Disputes Act, 1938. Private members' Bills introduced in the different Provincial Legislative Assemblies during the last eighteen months cover minimum wage fixing machinery and further regulation of conditions in unregulated factories in the Central Provinces and for the compulsory recognition by employers of unions of their workers in Bombay, Madras and in or their workers in Bollinay, maints and into United Provinces. As far as Madras is concerned, the Minister for Labour has been successful as a result of his personal efforts in the matter, to secure recognition by the employers of all unions which have been registered under the Indian Trade Unions Act. It is clearly impossible for us even to attempt to give brief summaries of all these various pieces of enacted or proposed Labour legislation but in view of their importance as models on which further legislation is likely to be passed, we shall give below brief descriptive notes of the Bombay Industrial Disputes Act, 1988 and of the Bombay Shops and Commercial Establishments Bill, 1939.

Responsible spokesmen of industrial interests in the country have given expression to their sense of perturbation at the lack of uniformity and consistency in the labour policies now being pursued by Provincial Governments. It has become increasingly apparent, since the introduction of Provincial Autonomy, that the impetus towards emacting measures to improve the lot of the working classes differs in intensity from one province to another and that there are wide gaps between labour amenities in different parts of India. These disparities, it is recognised, must inevitably tend to weaken the competing power of the more advanced provinces, especially when they are, in addition, faced with increased Central and Provincial taxation.

Notwithstanding the extensive reforms which have been carried out both by the Central and the Provincial Legislatures in India during the past fifteen years, acute discontent is becoming increasingly manifest in most industrial centres. Strikes have been and continue to be frequent, most of them short and sporadle,

but some bitter and prolonged. The All-India Statistics of Industrial Disputes for the years 1937 and 1938 show that as against an annual average of 147 strikes during the thirteen years between 1924 and 1936, the number of strikes during these two years amounted to 379 and 399 respectively—the last being the highest since these statistics began to be the highest since these statistics began to be compiled. The number of workers affected by these strikes was 6,47,801 in 1937 as against 1,14,217 in 1935. The next highest figure is 6,00,351 for 1921. Working days lost amounted to 8,98 millions in 1937 and 9,20 millions in 1988 as compared with less than a million 1938 as compared with less years the principal scenes of industrial conflict in India were staged in the jute industry in Bengal and in the cotton textile industry in Cawnpore. It is of interest, however, to observe that the Province of Bombay, with the exception of Gokak, has been singularly free from large scale, industrial disputes during the last five veers and that there was not a single strike in any of the cotton textile mills in Amedabad during the whole of the year 1938. The statistics given prove conclusively that the problem of industrial relations is the chief problem confronting Indian industry at the present time and that further industrial development in India must depend upon a proper solution of it. Employers in Bengal have been awakened to a realisation of this, and at a meeting of the Calcutta members of the Employers' Federation of India held in August 1938 it was decided to form an Eastern India Committee for the purpose "of giving continuous consideration to the improvement of the wellbeing and the efficiency of the workers in the establishments controlled by its members."

DIRECTOR, INTERNATIONAL LABOUR OFFICE, VISITS INDIA.

Among the more important events that occurred in the field of Indian Labour during the two years June 1937 to June 1939 must be mentioned the visit paid by Mr. Harold Butler, Director of the International Labour Office, to India, Ceylon, Malaya and the Netherland Indies during the winter of 1937-38. Mr. Butler has recorded the impressions gained as a result of his tours in an exceedingly well written and interesting report entitled "Problems of Industry in the East"—International Labour Office, Geneva, 1938, Studies and Reports, Series B (Economic Conditions) No. 29, which should be read by everybody interested in Labour.

EMPLOYMENT OF CHILDREN'S ACT, 1938.

The Government of India passed an Act in the Central Legislature in 1938 for the prevention of the employment of children who have not completed their fifteenth year in any occupation connected with the transport of passengers, goods or mails by railway or in any occupation involving the handling of goods within the limits of any port to which for the time being any of the provisions of the Indian Ports Act, 1908, are applicable. By an Amending Act passed in 1938 the employment of any child who has not completed his twelthy year is prohibited in any

workshop connected with bids making; carpet weaving; cement manufacture including bagging of cement; cloth printing, dyeing and weaving; manufacture of matches, explosives and fire-works; mica-cutting and splitting; shellac manufacture; tanning and wool deaning. The prohibition, however, does not extend to any workshop wherein any process is carried on by the occupier with the aid of his family only and without employing hired labour or to any school established by or receiving assistance or recognition from a Provincial Government. Provincial Governments are empowered by the Amending Act to add any description of process to the industries already scheduled in which the employment of children under twelve years of age should be prohibited.

BOMBAY INDUSTRIAL DISPUTES ACT. 1938.

This Act is perhaps the most advanced and outstanding piece of Labour legislation ever attempted in India. Put in a nutshell, the object of the Act is to make all strikes and lock-outs illegal until such time as the procedure provided for in the Act for conciliation and arbitration is exhausted. All industrial matters relating to wages; conditions of employment; privileges, rights or duties of employment; privileges, rights or duties of employment or non-employment are divided into two schedules. All matters which regulate the relations between employers and employees such as rules of conduct or standing orders for operatives are listed under Schedule I. Matters connected with wages, hours of work and conditions of employment are listed under Schedule II. Government have power to modify these schedules (Section 72).

Standing Orders: Every employer in an industry to which the Act is made applicable is required to submit, within a period of two months from the date of the application of the Act to that industry, a draft of the Standing Orders which he proposes to adopt for governing the relations between him and his employees. The Commissioner of Labour is to "settle" these Standing Orders after consulting all the interests concerned in the industry. Any person aggrieved by any of the Standing Orders so "settled" has the right of appeal to the Industrial Court. (Sections 28 & 27).

Changes: No employer is to be permitted to make any change in any of the Standing Orders settled by the Commissioner of Labour or by the Industrial Court on appeal or in respect of any industrial matter included under Schedule II unless notice of such intended change is given to the representative of employees. Any employee who desires a change in any industrial matter is also required to give notice of such intended change to his employer. Copies of all such notices are required to be forwarded to the Commissioner of Labour, the Chief Conciliator, the Engistrar, the Labour Officer and to any other person as may be prescribed. (Section 28.)

Representatives of Employees:—The Act contemplates the creation of three distinct types of unions. In the first place no union which has not been registered under the Indian Trade Unions Act, 1926, will have any place in the

scheme of things under this Act. Unions may he either occupational unions or industrial unions.

Iny union which has a membership of five per cant. of the total number employed in any occupation or industry in any local area and which has been recognised by the employers concerned or any union which has not been so recognised but which has a membership of twenty ive per cent. of the total number employed may apply for registration for the purposes of the Act. (Sections 7 & 8.) Any registered union which has a membership of twenty-five per cent. of the total number employed in the occupation or industry concerned may apply to the Registrar for declaration as a representative union. (Section 12). Unions which have a membership of five per cent. or more but less than twenty-five per cent. and which have not been recognised by the employers concerned may apply to the Registrar for being declared as qualified unions. (Section 11.) The three types of unions, therefore, are: (1) Registered Unions; (2) Representative Unions; and (3) Qualified Unions. "Representative of Employees" means (i) where the majority of employees directly affected by a change are members of a registered union, such registered union; or (44) where some of the employees directly affected by the change belong to a representative union, that representative union or (54) in other cases such representatives not union. (Section 12). Unions which have a or (iii) in other cases such representatives not being more than five as may be elected in the manner prescribed by employees directly affected by the change from among themselves; or (iv) in cases where representatives are not elected under (iii) and in all other cases not falling under any of these clauses, the Labour Officer. (Section 3 (29). The Rules made under the Act make provision for the determination of the union which is a representative of employees; and, failing unions, for the election of the workers' own representatives.

Preliminary Procedure:—On the receipt of a notice of change, the employer and the representative of the employees concerned are to discuss the proposed change. A period of fifteen days has been allowed for these discussions. If an agreement has been reached between the parties, the memorandum of such agreement is to be sent to the Registrar for registration. (Section 30.) In cases where the Labour Officer is one of the parties, the Labour Officer is required to put the terms of the proposed agreement before a meeting of the employees concerned and he is empowered to enter into an agreement only if the majority of such employees concur. (Section 32.)

When dispute deemed to commence:—If the preliminary proceedings fall to produce an agreement, the party giving the notice is required, if he still desires that the proposed change should be effected, to send a full statement of the case to the conclistor, the Chief Conclistor and the Registrar. (Section 84). On receipt of the statement of the case, the Conclistor is required to enter the industrial dispute in a register, (Section 85.)

has also been made for the appointment of Boards of Conciliation consisting of independent chairman and members representing employers and employees to be selected by Government from panies formed for the purpose. (Section 28.) On making an entry of an industrial dispute, the Conciliator concerned has to try and bring about concinator concerned has to try and bring about a settlement of the dispute (section 36) but power is reserved to the Chief Conciliator to intervene at any stage in any conciliation proceedings held by another Conciliator or the Conciliator has to send a report of the whole case to Government on the conclusion of the conciliator ment on the conclusion of the conciliation proment on the concusion of the concusions pro-ceedings, and in all cases where agreements are reached copies of the agreements are to be forwarded to the Registrar. (Section 38.) During the pendency of any proceedings before the Conciliator the Government may, and if both the parties agree either prior to the commence-ment of such proceedings or after the failure of the Conciliator to bring about a settlement shall, refer the dispute to a Board of Conciliation. (Section 39.) Government is empowered to lay down time limits for different stages of concilia-tion proceedings (Section 41) and the Act gives various powers to Conciliators and to Boards for summoning of witnesses, production of documents, etc. (Section 40.)

Industrial Court: The Act makes provision for the appointment of an Industrial Court for determining industrial disputes and for dealing with other matters under the provisions of the Act. The Court is to consist of two or more Act. The Court is to consist of two or more members to be selected from persons who are, have been or are eligible, for being appointed as Judges of a High Court. (Section 24.) The Government of Bombay have appointed the Hon'ble Mr. Justice H. V. Divatia as the President of the Industrial Court and the District Judges of Ahmedabad and Sholapur as Members. The Industrial Court, inter aid, is to decide all matters referred to it under Chapter II of the act connected with the registration of unions and it has also to decide appeals from decisions of the Commissioner of Labour in connection with the Standing orders. (Section 53.)

Arbitration:—Any employer and a registered union may by a written agreement (called a submission) agree to submit any present or future industrial dispute or any classes of such disputes maustrial dispute or any casess of such disputes to arbitration of any person whether such arbitrator is named in the agreement or not or to the Industrial Court. All submissions are to be registered with the Registrar. (Section 48.) In the absence of an agreement to the contrary, submissions are irrevocable but are terminable by giving six months' notice. (Section 44.) The conciliation proceedings provided for under the Act are barred in cases where the representative of employees is a registered union which is a party to a submission. (Section 46.) The Act contains various provisions with regard to the duties of the Industrial Court, procedure before the Court, execution of orders as to costs and the parties on whom orders or awards of the Industrial Court will be binding.

Conciliation:—The Act makes provision for the appointment of Conciliators and Special lock-out will be illegal if it is declared, common to be the ex-offield Chief Conciliator for the purposes of the Act. (Section 21.) Provision

matter and submitted to the Commissioner of Labour are settled by him or by the Industrial Court, as the case may be, or before the explry of six months from the date on which such Standing Orders come into operation; (b) with-out giving notice in accordance with the provisions of Section 28; (c) only for the reason that the employer has not carried out the provisions of any Standing Order or has made an illegal change; (d) in cases where notice of change has been given and where no agreement in regard to such change is arrived at before the statement of the case is received by the Registrar; (e) in cases where conciliation proceedings in regard to the industrial dispute to which the strike relates have commenced, before the completion of such proceedings; (f) in cases where a submission is registered until such submission is lawfully revoked; or in contravention of the terms of a registered agreement, settlement or award. In cases where conciliation proceedings in regard to any industrial dispute have been completed, a strike or lock-out relating to such dispute will be illegal if it is commenced at any time after the expiry of two months after the completion of such proceedings. (Sections 62 & The determination of the question of whether any strike or lock-out is illegal rests with the Industrial Court.

Penalties:—Various penalties are provided for breaches of the Act (Sections 65 & 66) and for instigating or incting others to take part in an illegal strike or lock-out. (Section 67.) Penalties are also provided for the making of illegal changes. (Section 69); for disclosing confidential information (Section 69); for obstructing persons from carrying out duties imposed by the Act (Section 70); and for victimisation of employees for trade union activities or for participating in any of the proceedings under the Act (Section 64).

Miscellaneous:—Important provisions of a miscellaneous character relate to illegal changes (Section 73), the binding character of and the periods for which agreements are to remain in force (Sections 76 & 77), jurisdiction of Courts (Section 79), etc. In cases in which a representative union is a party to any agreement, settlement, submission or award, the Provincial Government is empowered, after consulting the Industrial Court if it deems it necessary to do so, to extend the agreement, etc., to all employees in the industry concerned (Section 76 (2)).

Officers and Areas:—In addition to the Conditators and the Industrial Court, the Act makes provision for the appointment of a Registrar of Unions for the whole Province (Section 4) and for the appointment of Labour Officers (Section 22). The powers and duties of the Labour Officer are defined in Section 25. "Local area" means any area notified as such by the Local Government.

Application of the Act:—The Government of Bombay have decided to apply the Act in the first instance to the cotton textile industry with effect from the 1st June 1939. The sections relating to conciliation and arbitration will, however, be applied from 1st August 1939. The term "cotton textile industry" will include all factories notified under section 2 (j) of the Indian Factories Act, 1934, which are

engaged in cotton spinning, cotton weaving with or without an admixture of silk, rayon or artificial silk, cotton knitting and hosiery, and all cotton dyeing, bleaching and printing departments, and mechanics' shops attached to such concerns. The sections of the Act relating to illegal strikes and lock-outs and the penalties attached thereto are not to be brought into operation at present and Government have reserved to themselves the power to bring these sections into operation as and when necessary. Every town and village in the Province of Bombay which has one or more cotton textile units according to the definition given has been declared as a "Local Area." Mr. N. A. Mehrban M.B.E., F.S.S., Assistant Commissioner of Labour, Government of Bombay, has been appointed as the first Registrar of Unions under the Act. Mr. A. S. Iyengar, Labour Officer at Ahmedabad, has been appointed Conciliator for the local areas of Ahmedabad, Viramgam, Nadiad, Broach, Surat and Gogha and Messrs, S. R. Deshpande, M.B.E., and S. V. Joshi, Assistant Commissioners of Labour, have been appointed Conciliators for Bombay city and the remaining 17 local areas in the Province. Mr. M. P. LaBouchardiere, I.P., is the Labour Officer for Bombay city. The appointment of Labour Officers for the other areas had not been made when we went to press.

Repeal:—The Bombay Trade Disputes Conciliation Act, 1934, will be repealed with effect from the 1st August 1939.

GENERAL STRIKE OF 7TH NOVEMBER 1938.

The Bombay Trade Disputes Act, 1938, which has just been reviewed above was responsible for considerable opposition from the Labour Members on the opposition benches in the Bombay Legislative Assembly. The main ground on which this opposition was based was that a popular Congress Government sought to deprive the workers of their fundamental right to strike. Several members on the Government Benches repeatedly asserted that this was not the intention of the Bill, that the right to strike was not being taken away and that all the Bill intended to do was to postpone or defer the right to strike until such time as all the avenues provided for in the Bill to bring about an amicable settlement of a dispute had been exhausted. The representatives of Labour both in and outside the Assembly made every effort to misrepresent the intentions of Government to the workers. Mass meetings were held in Bombay, Sholapur and other centres to oppose the measure, and when these failed to move Government, the Bombay Provincial Trade Union Congress and the Independent Labour Party decided to organise a one-day protest strike in all industries in all centres in the Province on the 7th November 1938.

In spite of very elaborate preparations, the strike was a complete failure in all centres except Bombay and Sholapur. In Bombay city only 54,000 out of a total of 1,16,000 day shift workers in cotton textile mills did not turn up for work in the morning. The promoters of the strike thereupon resorted to mass intimidation, to stone throwing, to the stopping of vehicular traffic, to attempting forcible closure of retail shops and

to rowdy demonstrations. As the day wore on. meb rule prevailed in various parts of the city and a few loyal women workers were even stripped of their clothing in open streets, police had to resort to firing on two occasions and some persons were injured. The Government of Bombay decided that a full enquiry should be held by a Committee into all the facts relating to the said disturbances and the precautionary measures and the action taken by the authorities. Government accordingly appointed a Committee consisting of the Hon ble Mr. Justice H. J. Kania as Chairman and Messrs. V.F. Taraporewala and M. C. Chagla, Barristersat-Law as Members and Mr. H. K. Chainani, 1 C.S., Deputy Secretary, Legal Department, as Secretary. The Committee published their Report early in February 1939. The report is an illuminating document illustrative of the mob passions that can be excited by irresponsible labour leaders.

BOMBAY SHOPS BILL, 1939.

This Hill was introduced in the Bombay Legislative Assembly on the 17th April 1939 and received support from all sections of the House. The object of the Hill is to regulate the hours of work in shops and commercial establishments including pedhis, restaurants and theatres. Domestic servants; clubs and residential hotels; stores and refreshment rooms at railway stations, docks and wharfs; bazaars and fairs for the sale of work for charitable or other purposes from which no profit is derived; Government offices and offices of local authorities; establishments for the treatment or cure of the sick, infirm, destitute or mentally unfit; and persons occupying posts of a confidential, managerial or supervisory character are excluded.

That legislation of this kind is necessary was shown by the results of an inquiry conducted by the Labour Office of the Government of Bombay in 1938 into the wages, hours of work and conditions of employment in the retail trade of some towns in the Province of Bombay. This inquiry showed that in Bombay city, employees in retail shops and restaurants had, on an average, to work for more than 12 hours a day, with very little provision for holidays or rest intervals. Nearly 65 per cent. of the 10,212 employees covered by the inquiry had to work for 11 hours or more, over 13 per cent, having to work not less than 15 hours a day. The object of this Bill is to put an end to this state of affairs, while not overlooking the requirements of commerce and the consumer.

The Bill is divided into four main chapters dealing with shops; commercial establishments: estaurants; eating houses, theatres and other places of amusement or entertainment; and the employment of children and young persons.

As far as shops are concerned, clause 7 of the Bill prescribes the maximum hours of work of persons employed in shops at 10 per day. This is one hour longer than the ordinary factory day, but as against factory legislation which provides for a compulsory holiday for every seven days working, the Shops' Bill provides for four holidays a month on the basis of one holiday between the complete the complex to give one holiday every week. He will be free to give the holidays in accordance

with the requirements of his business. The Bill proposes to make it compulsory that every shop shall be closed not later than 9 p.m., provided, however, that any customer who was being served or was waiting to be served at 9 p.m. at any shop may be served in such shop during the quarter of an hour immediately following such hour. Power is sought to be given to the Provincial Governments to grant exemption in the case of certain types of shops, such as chemists and druggists' shops or shops dealing with funeral requisities. In order, however, that compulsory closure may not affect adversely the interests of shop-keepers, it is necessary to prevent street trading after the shop closing hour, and provision has therefore been made to prevent any person from carrying on after 9 p.m. in or adjacent to a street or public place the sale of any goods. "his will not, however, apply to the sale of newspapers. The maximum spread-over has been fixed at 12 hours a day, but in order to cover the cases of shops which deal in perishable goods and whose busiest periods are early in the morning and late at night provision has been made for the extension of the spread-over to 14 hours, provided such shops close for not less than three hours between the opening and the closing time.

As far as commercial establishments are concerned, there are days in a week or a month or a quarter, when longer hours are worked than usual, and the same applies to the various exchanges where settlement days often give rise to abnormal working hours. It was, therefore, considered that it would not be advisable to fix the daily limit of hours in the case of such establishments and the Bill, therefore, provides that the total number of hours that can be worked in any one month should be restricted to 220. Taking 26 as the number of working days in any one mouth, this works out at an average of about 81 hours per day. No over-time is permitted in the case of shops, but in commercial establishments over-time to the extent of 120 hours per year will be permitted so as to enable banks and other large establishments to deal with the pressure of work involved in the preparation of balance sheets, stock-taking, etc. The provision for holidays is on the same basis as in shops, but in the case of commercial establishments for which provision is made for intervals for meals and a spread-over of 12 hours, no closing hour has been provided.

In the case of restaurants, eating houses, theatres and similar establishments, a ten hour day has been prescribed with a spread-over of 14 hours. These establishments have necessarily to keep open for long hours, but the intensity of the trade done varies and the spread-over of 14 hours will give the employers an opportunity of regulating the hours of work of their employees in accordance with the requirements of the trade. No closing is prescribed for these places because they are already subject to regulation by the police or excise departments.

No special provision has been made in the Bill for the hours of work of women employees, and as the Bill stands, there is nothing to prevent the employment of women in the types of establishments to be covered by the proposed Act at night. But, no child who has not completed his twelfth year will be allowed to work at all

in the establishments covered by the Bill: while the hours in the case of young persons between the ages of thirteen and seventeen will be restricted to 8 per day, and this only between 6 a.m. and 7 p.m.

The Bill was referred to a Select Committee consisting of fifteen members in all, and the Committee was asked to submit its report to the Assembly by 31st August 1939.

BOMBAY TEXTILE LABOUR INOUIRY COMMITTEE.

In October 1937, the Government of Bombay appointed a Committee with Mr. Jairamdas Doulatram as Chairman to investigate into the question of the adequacy of wages and kindred matters in counexion with the textile industry in the Province of Bombay. The other members of the Committee were Messrs. Valkunth L. Mehta, D. R. Gadgil and S. A. Brelvi. Mossrs. Sakarial Balabhai, M.L.A. and S. D. Saklatvals. M.L.A., representing the employers' interests and Messrs. Khandubhai K. Desai, M.L.A. and B. A. Khedgikar, M.L.A., representing the workers' interests were appointed Associate Members of the Committee to assist them in the proper presentation of the cases of their respective sides but with no power to partake in the final deliberations or to vote with regard to the decisions or recommendations which the Committee might make. Mr. S. R. Deshande, B.Litt. (Oxon.) was appointed Secretary. The terms of reference which the Committee were asked to consider were as follows:—

- (1) To examine the wages paid to workers having regard to the hours, efficiency and conditions of work in the various centres of the textile industry in the Province and to enquire, in this regard, into the adequacy or inadequacy of the wages earned in relation to a living wage standard and, if they are found in any occupation, centre or unit of the industry to be inadequate, to enquire into and report upon the reasons therefor, and to make recommendations regarding:—
 - (a) the establishment of a minimum wage;
 - (b) the measures which the employers, the employees and the Government should take to improve the wage level;

- (c) the remuneration of workers engaged on night-shift, and the regulation of nightshift work;
- (d standardisation of wages and musters; and
- (e) the methods of automatic adjustment of wages in future.
- (2) To report whether in view of the present condition of the industry an immediate increase in wages can be given in any occupation, centre or unit of the industry, pending the conclusion of the Committee's work and the preparation of its Report and to make recommendations in this behalf.
- (3) To report on any matters germane to the above.

In accordance with para (2) of the terms of reference the Committee published an interim report in February 1938. After making a careful survey of existing conditions in the cotton textile mills in the Cities of Bombay, Ahmedabad and Sholapur, especially with regard to the prices of raw cotton and the manufactured article, the Committee reached the conclusion that the depression which had been adduced as the principal justification for the wage cuts which had been effected in the textile mills in the Province of Bombay mainly during the years 1933 and 1934 had lifted and that the capacity of the industry to earn profits was distinctly better than it was when the cuts were imposed. They were of the opinion, therefore, that it was not inappropriate for labour to entertain the hope of being able to participate in the relative prosperity which the industry now enjoyed. was because of the reassuring position of the industry that the Committee held that the cotton textile industry could well face the future in a spirit of confidence and that it could meet, out of the substantial betterment that had already accrued and which would continue to accrue for the greater part of the year 1938, additional charges of a reasonable magnitude for raising the wage level. They accordingly recommended that the increases set out in the following schedule should be given :-

SCHEDULE.

Category of earnings.	Rate of increase.	Remarks.		
1	2	8		
Below Rs. 13-8-0	3 Annas in the Rupee	Provided that no person falling in this category shall receive more than Rs. 15-8 as a result of the increase.		
Rs. 13-8-0 and below Rs. 25	24 Annas in the Rupes	Provided that no person falling in this category shall receive more than Rs. 28 as a result of the increase.		
Rs. 25 and below Rs. 35	2 Annas in the Rupee	Provided that no person falling in this category shall receive more than Rs. 39-4 as a result of the increase.		
Ra, 35 and below Ra, 40	11 Annas in the Rupee	Provided that no person falling in this category shall receive more than Rs. 43 as a result of the increase.		
Ra. 40 and below Ra. 75	1 Anna in the Rupee	Provided that no person falling in this category shall receive an increase in earnings of less than Ra. 3.		
Ra. 75 and over	Nü.			

- (1) The basis on which the increase will be ment. Owing to ill health, Mr. Jairamdas loulated shall be the net earnings of each Daulatram Chairman of the Committee resigned calculated shall be the net earnings of each individual worker for each pay-period.
- (2) (a) In the case of time workers, the rate of increase for an individual worker in any occupation is indicated by the rate shown in the Schedule against the category of earnings within which may fall the wages to which a worker in that occupation working for the full pay-period is entitled.
- (b) In the case of piece workers, the rate of increase to which an individual worker will be entitled is indicated in the Schedule by the rate shown against the category of earnings within which may fall his net earnings during the payperiod.
- (3) The earnings shown in the Schedule above relate to a pay-period of 26 working days.
- (4) In pay-periods containing less or more than 26 working days, the categories of earnings shown in the Schedule should be adjusted in the proportion which the number of working days in the pay-period bears to 26. The maximum and the minimum limits shown in column 3 of the Schedule should also be adjusted in the same proportion.
- (5) These recommendations apply to the entire body of workers (as defined in the Indian Factories Act but excluding all persons employed in a clerical capacity) employed in the cotton textile industry in the Bombay Province.

The Committee calculated that, on the basis of the figures given in the above Schedule, the percentage increase in the wages bill would amount to 9.0 for Ahmedabad, 11.9 for Bombay and 14.3 for Sholapur. It is calculated that the Committee's interim recommendations will increase the wages bill of all cotton textile mill workers in the Province of Bombay by about a crore of rupees per annum. In recommending the above increases, the Committee have taken into consideration one contingent factor which was brought to their notice by Government, viz., the provision that may have to be made for paying sickness benefits to workers as a result of social legislation which Government propose shortly to undertake. The Government of Bombay published the interim report with a resolution which stated that the conclusions and recommendations of the Committee, in the view of Government, were entitled to the weight and authority which should be attached to the award of an Industrial Court or a Court of Arbitration; and as such should be carried out and accepted both by employers and labour. Government further recommended that the increases in wages suggested by the Committee should be given commencing from the date of the disbursement of the wages due for the month of February 1938 or for the last pay period in that month. Except for a few small concerns, all cotton textile mills in the Province accepted the Committee's interim findings and gave their workers the increases in wages recommended by them.

The Committee dispersed in February 1938

in the month of June and the Government of Bombay appointed The Honourable Mr. Justice H. V. Divatia, a Puisne Judge of the Bombay High Court, Chairman of the Committee in the month of September. Mr. N. A. Mehrban, Assistant Commissioner of Labour, succeeded Mr. S. R. Deshpande as Secretary to the Committee when the latter went on leave in December 1938. The reconstituted Committee under the Chairmanship of Mr. Justice Divada commenced its public sittings in Bombay, on the 7th December with an extensive examination of the representatives of the Bombay Millowners' Association: the Bombay Provincial Trade Union Congress, the Marwadi Chamber of Commerce and representative workers from cotton mills in Bombay City. After dispersing for the Xmas holidays on the 23rd D.cember, the Committee re-assembled in Ahmedabad on the 4th January 1939. The Committee spent over two weeks in Ahmedabad during which it inspected several cotton textile mills, the offices and the various welfare activities of the Ahmedabad Textile Labour Association and examined the representatives of the Ahmedabad Millowners' and Textile Labour Associations, the Mill Kamdar Union, representative cotton mill workers and Mr. Ambaial Sarabai, Agent of the Calico Mills. Between January and May the Committee spent a week in Sholapur, visited several cotton mills, workshops, factories and institutions in Bombay City and all the Mills in Viramgam, Nadiad, Broach, Surat, Jalgaon, Chalisgaon, Amalner, Phulia, Poona, Gokak, Hubli, Barsi and Gadag. Representative cotton mill workers were examined at every centre visited. The repre-sentatives of the various mills in upcountry centres were examined by the Committee in Bombay, Several Government officers such as the Commissioner of Labour (Mr. J. F. Gennings, U.I.E., O.B.E.); the Director of Industries (Mr. P. B. Advani); the Government Labour Officer (Mr. W. Pryde, O.B.E., I.P.); the Municipal Commissioner, Bombay; and the Chief Inspector of Factories (Mr. T. W. Johnstone, O.B.E.) were examined in camera. Among dieticians and nutrition experts the Committee examined Dr. W. B. Ackroyd, M.D., Director of the Nutrition Fund Research Associa-Director of the Nutrition Fund Research Association of Coomoor; Colonel S. S. Sokhey, M.D., Director of the Haffkine Institute; Dr. A. S. Erulkar, M.D. (London); Dr. H. V. Tilak, F.R.O.S., M.E.B.S.; and Dr. Dastur, the Medical officer of the Tata Mills. The representatives of the Indian Merchanta' Chamber, the Bombay Presidency Women's Council, the Native Stock and Share Brokers' Association; the Sholspur, Dhulia and Hubli Girni Kamgar Unions, the Quiarst Sarni Kamdar Association: as also Gujarat Sarni Kamdar Association; as also Dr. Nazir Ahmad, Director of the Technological Laboratory of the Indian Central Cotton Com-mittee and Mr. F. Stones, O.B.E., Managing Director of Messrs. E. D. Sassoon & Co., Ltd. were also examined by the Committee in Bombay. As we go to Press, the Committee were engaged in a series of confidential examinations of the representatives of the Bombay and the Ah-medabad Millowners' Associations in connection with their schemes and proposals for standardisa-tion of wages. The Committee expect to submit after submitting their Interim Report to Govern-their report to Government in November 1989.

THE CAWNPORE LABOUR INQUIRY

Few cities in India have expanded industrially so rapidly as Cawnpore. In 1901 its population was 172,694. In 1931 this had increased by over a quarter to 219,819. Today it is variously estimated at being somewhere between 285 to 310 thousand. Besides having a large number of cotton spinning and weaving mills, Cawnpore is also an important centre of the tanning industry and it has a large number of engineering and other factories as well. The total factory population of the city in 1937 was over 75,000. Since the advent of the Reforms. Cawnnore has been a storm centre of conflict between capital and labour. With the exception of a few employers who were members of the North India Chamber of Commerce and some hunderds of workers who were members of two loosely knit trade unions known as the Mazdoor Sahha, a communist ridden body, and the Dalit Mazdoor Sangh there was, at the beginning of the year 1937, little organisation either between the employers or the employed. Representatives of various political groups standing for election to the United Provinces Legislative Assembly consequently found a rich virgin field among the ranks of the workers in this city and they endeavoured to enlist support for their candidature by making all sorts of wild and rash promises as to what they would do to ameliorate working conditions. Popular imagination was excited to fever point and even before the taking up of office by the Congress in July 1987 a large number of strikes had occurred in individual units. When Congress did take up the reins of Government industrial strife culminated in a complete stoppage of work in almost all cotton textile mills and several units in many other industries were also affected. The main demands centred round an immediate and an all-round increase in wages. Employers, alarmed at the turn events were taking, formed themselves into an association which was called The Employers' Association of Northern India. The Mazdoor Sabha had at the same time succeeded in widening its membership. Several deputations representing the interests of both the employers and the workers waited on the Hon'ble the Prime Minister. Pandit Govind Ballabh Pant and as a result of his eventual intervention in the dispute an agreement was concluded between the parties in the month of August 1987 by virtue of one of the terms of which Government agreed to appoint a Committee to examine and report on the conditions of life and work of labourers employed in factories in Cawnpore, The Committee as originally appointed in November 1937 consisted of Sriyut Rajendra Prasad Saheb (Chairman) and Sir Tracy Gavin Jones, Mr. Harihar Nath Shastri, Mr. Gulzarilal Nanda and Professor S. K. Rudra. Sir Tracy Gavin Jones and Mr. Shastri who represented the employers' and the workers' interests respectively mutually agreed to withdraw from the Committee in December. The services of Mr. Gulzarilal Nanda could not be spared by the Government of Bombay and Mr. B. Shiva Rao was appointed in his place on the 13th January 1938.

- The terms of reference to the Committee were as follows:—
- (1) Whether wage cuts have taken place direct or indirect, and if so, where and to what extent?
- (2) In case any such wage cut is established, whether there should be any increase in wages, and if so, what?
- (3) How do the present rates of wages in Cawnpore compare with those prevailing elsewhere in India and whether, taking also into consideration the profits made by the mills and the cost of living in Cawnpore they should be increased and if so, to what extent?
- (4) Is it desirable to prescribe any minimum rate of wages for any class of labour at Cawnpore and if so, what should such rate be?
- (5) What is the most suitable arrangement for shifts to enable a factory to continue working as long as it desires to do so without unduly inconveniencing the labourers?
- (6) Whether schemes of rationalization and intensification of labour have been, or are being or are intended to be introduced, and if so, on what lines? What are the effects of such schemes on the labourers as regards their earnings, health, efficiency, etc.?
- (7) What abuses, if any, are associated with the present system of supervision, recruiting, suspending and dismissing labourers and what steps should be taken to remove the same?
- (8) What days, if any, should be observed as holidays in factories in addition to or in lieu of Sundays?
- (0) On what terms should emergency leave be granted in the case of (a) piece workers and (b) time workers?
- (10) Are the general conditions of labour in factories satisfactory and what, if any, improvements are needed?
- (11) What improvements are required in the conditions in which the labourers live in Cawnpore especially as regards housing, sanitation, etc., and what steps should be taken to offect the same?
- (12) What welfare activities are desirable and through what agencies should they be carried out?
- (13) What statistical data should be maintained in regard to labour conditions and welfare and by what agency?

The Committee submitted their report to the U. P. Government early in April 1938. Government released the report for publication towards the end of that month with a Press Note expressing the hope that the suggestions and recommendations made by the Committee would lead to an amicable settlement of the pending differences between employers and workers, falling which Government would proceed to take the report into consideration and reach their own decisions. It was also announced that all representations in the matter should be submitted to Government by the 10th May. The report covers a very wide field of subjects and includes

- a hest of recommendations among the more, and, secondly, were heavily biassed in favour important of which are the following :-
- (1) Wage increases which are estimated to increase the wages bill by 10 to 12 per cent. The method to be followed in glving the increases is the same as that recommended by the Bombay Committee, viz., to divide the workers into different wage groups and to increase their monthly earnings on a sliding scale which ranges from 2½ annas in the rupee for those earning between Rs. 13 and Rs.19 per mensem to half an anna in the rupee in the case of workers getting between Rs.40 and Rs.59.
 - (2) Consolidation of bonuses with wages.
- (3) The establishment of a wage fixation board to function on the lines of the British Trade Boards for the adjustment of wages from time to time.
- (4) A minimum wage of Rs.15 per month of 26 working days.
- (5) Standardisation of wages in cotton textile mills.
- (6) The adoption of two straight shifts and the abolition of overlapping and multiple shifts,
- dissociation of jobbers in (7) Complete connexion with recruitment.
- (8) Abolition of methods of punishments such as suspension, the fixing of different piece rates for different qualities of production, etc.
- (9) The payment to discharged workers of compensation either at the rate of 15 days' wages for every year of service or a lump amount not exceeding six months' wages.
- (10) Fifteen days leave with full pay for workers with not less than two years' continuous service to their credit, and, in addition, 15 days' sick leave with half pay and 60 holidays per
- (11) Provision of resting places and dining sheds.
- Flotation of a loan of fifty lakhs of rupees by Government for the provision of 12,000 decent houses; the scheme to be completed by the Improvement Trust within a period of five
- Establishment of a welfare council and (13)organisation of maternity and child welfare.
- (14) Provision of a sickness insurance scheme on a contributory basis.
- (15) Provision of contributory Provident Fund schemes on the basis of equal contributions of half an anna in the rupee of earnings for both employers and workers.
- (16)The creation of a Labour Office on the lines of the Bombay Labour Office.
- The Committee estimated that the financial effect of the various recommendations and suggestions which they make, if accepted in toto, would be to raise the wages bill by about 21 per cent, per annum.
- The Employers' Association of Northern India in the course of a lengthy statement which they submitted to Government and which they also released to the Press about the middle of May 1938 stated that the recommendations of the Committee were unacceptable to employers in Cawapore because their findings were based, firstly on various inaccuracies and discrepancies, considerations are involved.

of the employees and were based on many wrong constructions of the facts. They stated that if the recommendations were accepted, the cotton textile industry in the city of Cawnpore would be saddled with a dead loss of over three lakhs of supees per annum and that it would have to close down forthwith. For example, the Association stated that unlike Bombay, Ahmedabad and Sholapur where cotton textile mills had effected large reductions in wages between 1933 and 1936, no mill in Cawnpore had effected wage cuts between 1929 and 1937 and that earnings had actually risen in several categories of occupations during this period. Real wages were, consequentially on the fall in the cost of living, very much higher and that the Committee had no justification in comparing wage levels between Cawnpore and Bombay where both efficiency and the cost of living were much higher. The workers' representatives and unions, on the other hand, stated that the Committee's recommendations fell far short of the workers' demands but that their acceptance in toto by the employers would be the minimum acceptable.

As soon as the statement of the Employers Association was published, 25,000 workers in textiles mills in Cawnpore downed tools and by the beginning of June 1938, over 40,000 workers in both textile and other factories were affected by the strike. The Government of the United Provinces were faced with a very critical situation and they appointed Mr. P. M. Khareghat, C.I.E., LUS., as Commissioner of Labour in addition to his own duties as Secretary to Government in the Department of Industries. Various conferences were held between the Hon, The Prime Minister of the U.P. and the Commissioner of Labour on the one hand and the representatives of the employers and the workers on the other and it was only after the strike had lasted for fifty days that an agreement was reached which was accepted by both sides. The Government of the United Provinces issued a special communique on the 6th July 1938 embodying the terms of the agreement and giving their own views on the different points contained therein. The following are some of the more important matters on which agreement was reached :-

- (1) The constitution of a wage fixation Board with an equal number of representatives of employers and workers with an independent Chairman to be selected by mutual consent falling which Government to appoint a Chairman from the ranks of Judges of the High Court or Senior District Judges. The Board would deal only with wage disputes of a general character and matters concerning individual Mills were to be dealt with by the Labour Commissioner.
- (2) Schemes of standardisation of wages and Rationalisation to be facilitated.
 - (3) Government to set up a Labour Exchange.
- (4) The Labour Commissioner to be the final authority in the matter of disputes,
- (5) Government accept the view of the employers that as regards social benefits such as leave with pay, sickness insurance, provident funds, etc., these are matters of a general character affecting all industries and should not be effected on a Provincial basis as all-India

- (6) The Mazdoor Sabha to be reconstituted of the Bombay method in that it gave greater of the workmen.
- (7) Standardisation of conditions of employment and fifteen days' notice to be given of any proposed change.
- (8) Acceptance by the workers of the increases in wages offered by the individual mills.

THE CENTRAL PROVINCES TEXTILE LABOUR INOURY COMMITTEE.

Following the example of Bombay and the United Provinces, the Government of the Central United Provinces, the Government of the Central Provinces and Berar also appointed a Committee n February 1938 to examine and report on the wages question of the workers in the cotton textile mills in that Province. The terms of reference of the O.P. and Berar Committee were, however, restricted to an examination of the interim report of the Bombay Textile Labour Inquiry Committee with a view to reporting on (1) the avenue to which the conditions to ing on (1) the extent to which the conditions in the cotton mills in the Central Provinces and Berar differ from those which formed the basis of the Bombay Committee's recommendation; (2) the changes that would, as a consequence, be necessary in these recommendations in their application to conditions in the Central Provinces; and (2) the date from which the modified vinces; and (3) the date from which the modified recommendations should take effect. The Committee was composed of Mr. N. J. Roughton, I.C.S., (Financial Commissioner) as Chairman and Messrs. A. C. Sen Gupta (Principal, Morris College, Nagpur), V. R. Kalappa, M.L.A. and C. C. Desal, I.C.S. (Director of Industries), who was also to be Secretary to the Committee. The Committee was to be advised on technical matters Committee was to be advised on technical matters by Mr. S. H., Batilwals, Manager of the Empress Mills, Nagpur and Mr. R. S. Rulkar, General Scoretary, Nagpur Textile Union. The Committee aubmitted their report to Government at the end of April and the report was published in the middle of May.

The Committee found that the condition of the textile industry in the Central Provinces and Berar was more like that of the mills in Bombay City rather than of either Ahmedabad or Shois-pur and the proposals for wage increases should accordingly be based on those adopted for Bombay City. Owing, however, to the lack of uniformity in the wage cuts, the Committee were of the opinion that it would not be equitable to adopt a scheme of graduated rates of increases similar to that recommended by the Bombay Committee. The objection to the Bombay Committee. The objection to the Bunnoy method, the Committee found, was that it gave an advantage to those mills which succeeded in introducing the largest wage cuts and which were now paying the lowest wages. Conditions in the Central Provinces were not the same as in Bombay in such important matters as the cost of living, the level of wages and efficiency of cartile, labour and therefore the Bombay textile labour and therefore the Bombay schedule could not be adopted bodily for the mills in that Province and would have to be so schedule could not be adopted bodily for the by the appointment of Mr. G. M. Hayman, as a mills in that Province and would have to be so member. The report of the Bihar Committee modified as to suit local conditions. It was for is expected to be published by the beginning of these reasons that, in spite of the attractiveness | September 1989.

on a sound basis with the assistance of the relief to the lower-paid workers, the Committee Labour Commissioner, that it should foster preferred the system of restoring a fixed percentdiscipline in the Mills and be fully competent age of the wage cuts and they accordingly recomto prevent any strike being declared except mended that in all cases where wage cuts had after due deliberation and with the full consent been effected, 60 per cent. of the actual wage been effected, 60 per cent. of the actual wage cut should be restored; and that, in addition, where new rates had, since the cut of 1983, been adopted for new employees, 60 per cent, of the difference between the new rates and the old rates should be added to the new rates. Committee rec : mended that the restoration in the wage cuts proposed should be given with effect from the 1st May 1938. In a minute of dissent, Mr. Kalappa recommended the adoption of the Bombay schedule with such modifications as might be necessary to secure the restoration of 75 per cent. of the wage cut as an immediate measure and the restoration of the full wage cut at the earliest possible opportunity.

> The recommendations of the Committee, with slight modifications made by Government have been given effect to by all the mills and accepted by almost all the workers. The total amount of increase remains limited to only 60 per cent. of wage cuts, but it is given on a sliding scale basis, the Department of Industries having prepared schedules of increases of wages to suit the circumstances of individual mills. The workers of the Hinganghat Mills inelsted on full restoration, but the protracted strike of more than two months secured them nothing more than what was recommended by Government. The total wages bill in the cotton textile industry in the Central Provinces and Berar is expected to have increased by about five lakhs of rupees annually as a result of the Committee's recommendations.

> The success achieved by the workers in the Cotton Textile Industry also encouraged workers in other industries to demand wage increases and a few demonstrations and strikes were staged to obtain redress of their grievances but without any success.

THE BIHAR LABOUR INOUIRY COMMITTEE.

Early in March 1938, the Government of Bihar appointed a Committee of Inquiry ω enquire into the conditions of labour prevailing in the industrial contree as well as in the industries of the Province with particular reference to each impor-tant industry. Mr. Rajendra Prasad, who was also appointed Chairman of the Cawpore Labour Inquiry Committee, is Chairman of this Committee as well. The other members of the Bihar Committee are Mr. M. P. Gandhi, Professor Abdul Bari, Mr. Jagat Narain Lai, Dr. Mukherjee, Mr. H. B. Chandra and Professor S. K. Saran who is also to act as Secretary to the Committee, The Committee has powers to co-opt one or more representatives of capital and labour. Owing to the continued ill health of Mr. Rajendra Prasad, Mr. R. B. Bakhale, a member of the Servants of India Society, Bombay, was appointed Deputy Chairman of the Committee in November 1938. The Committee was further strengthened

BOMBAY MUNICIPALITY ADOPTS MINIMUM WAGE.

A notable event during the year 1938-39 was a resolution passed by the Standing Committee of the Bombay Municipal Corporation on the 26th January 1938 to pay a minimum salary of Rs. 25 per month exclusive of benefits such as House Rent allowance or the value of free quarters wherever provided to all permanent male Municipal employees from the year 1938-39. It was also resolved that women, boys and men on daily wages should be excluded from the scope of the resolution.

This concludes our historical survey of the growth of the Labour Problem in India. this survey factory legislation and legislation in connection with payment of wages has been dealt with as exhaustively as space permitted. Want of space prevents us from dealing with the reports of the Courts of Enquiry appointed by the Government of Madras and Assam to enquire into disputes between the employers and the workers in cotton textile mills in Coimbatore and of the Assam Oil Campany. These reports follow much along the same lines as those published by the U. P. and the C. P. Committees, We now deal more briefly with other important phases connected with labour in India.

INDUSTRIAL WORKERS IN INDIA.

the industrial importance of the country :-

"Twenty-eight million agricultural workers excluding peasant proprietors; 141,000 maritime workers, lascars, etc., a figure second only to that of the United Kingdom; over twenty million workers in industry, including cottage industries, mines and transport; railway mileage in excess of that in every country in the world except the United States of America.

The figures for the 1931 population census which revealed a total population of nearly 353 millions show that the number of agricultural workers has increased to nearly thirty-one and a half millions. This figure excludes cultivating

In 1922 India obtained recognition by the no reliable statistics are available in India to League of Nations as one of the eight chief show approximately correct figures of the she is entitled to a permanent seat on the of any importance in India. There has been no famine or epidemic Governing Body of the International Labour of any importance in India since 1931 and the Organisation. In the memorandum prepared by the India Office of the British Government for the substantiation of India's claims as such the following figures were given to illustrate checked the census of 1941 will reveal a total population of nearly 400 millions. The statistics contained in the annual administration reports for factories and mines show the numbers of persons employed in factories and mines which are subject to the control of the Factories and the Mines Acts. As far as factories are concerned, it is known that there are thousands of small factories in India which are not subject to any control and no statistics are therefore available to show the numbers employed in such concerns. All that the annual factory statistics show are the numbers of factories which are controlled by the Indian Factories Act in any particular year and the numbers employed in such factories. With each expansion in the definition of the owners (27 millions), cultivating tenants (34 term 'factory' more existing factories come millions), landlords (over three millions) and under control and are therefore included in 'others' (six and a half millions). The number the statistics but such expansions only occurred of earners plus working dependants in industry, in the years immediately following the passing trade, transport and mines amounts to twentysix millions. Domestic servants number eleven to these provisos, the following figures show the millions. These figures, at the best, must be growth of the factory population in India during considered as estimates, because even to-day the last forty-three years.

IMMIGRATION.

The principal industry of India being agriculture there are naturally no large movements of population from one part to another. Where the migration figures are high another, where the migration figures are high it is generally in the small units. Thus, Delhi has 41 per cent, of immigrants and Ajmere-Merwara 19 per cent, while Ajmere City itself has as many immigrants as natives. Immigration influences the population of India very little. The 1931 Census shows only 730,562 persons as born outside the country as against 603,526 in 1921. The total emigration from the country is estimated at a million during the decade 1921-1931. The most important interprovincial streams of migration are those between Assam and the other provinces in India, parti-cularly Madras and Bihar and Orissa. At the last Census, Assam showed a net gain of nearly ast census, Assam showed a net gain of hearly a million and a quarter due largely to the influx of immigrant labour on plantations. The greatest loss was shown by Bihar and Orissa which suffered to the extent of 1,291,567 persons. As between British India and the Native States, the tendency prior to 1921 was for migration into British India but the position during the decade 1921-1931 was reversed. The most striking example of this in 1931 was Bikaner State which showed a net gain of 161,303.

As far as labour is concerned, the greatest fluidity is to be found in Assam and the greatest immobility in Bihar and Orissa where 959 out of every 1,000 persons in the province in 1931 were born therein. The emigration of labour from Madras is mainly overseas particularly to from Madras is mainly overseas particularly to through the medium of a recruiting agent, a Malaya but recruiting of Indian labour for Malaya was stopped in 1930. None the tess, considerably over half a million Indians were found in that country in 1931. This embargo found in that country in 1931. This embargo was lifted some two or three years later but the Government of India again stopped assisted interpretation to Malaya with effect from the at so much per head. In Bengal the recruiting 1881 fellowing a restriction of 1000. 15th June 1938 following a repatriation of 1000 agent receives a lump sum payment from which

India labourers from that country as a sequel to a general reduction of 20 per cent in the wages of rubber estate workers. Delegations from the Malayan estates and the Government of Madras had a conterence with the Government of India on the 9th February 1939. The Government of Madras with the concurrence of the Government of India proposed the fixation of minimum standard wages for men at 50 cents and for women at 40 cents with the proviso that an adequate share of the benefit of any improvement in the condition of the rubber industry should be passed on to the Indian labourers. The Executive Committee of Labour, Industry and Commerce decided in June 1938 to recommend to Government the prohibition of immigration into (eylon as a measure to relieve local unemployment. This decision ignored the Jackson Report which strongly advised against this prohibition. As far as the main industrial cities in India are concerned, Bombay draws the bulk of its labour from Ratnegiri and the Konkan ; Calcutta draws an appreciable part from Bihar and Orissa and the greater part of the purdeshi labour in the Ahmedabad cotton mills comes from the United Provinces.

METHODS OF RECRUITMENT.

One of the most difficult problems connected with industrial labour in India is the method followed for its recruitment. Minor variations in the method may be found as between industry and industry but the cardinal principle is the same in all industries, and that is, recruitment through the medium of a recruiting agent, a

he pays his men and retains the balance himself.) welfare of the labour force and from such In the textile mills in the Bombay Presidency the jobbers receive fixed salaries and perquisites both in cash and in kind from the workers whom they recruit at the time of placement and also during employment. Recruitment through contractors is most prevalent in Burma owing to the scarcity of labour in that nro vince

The system of recruitment followed in the case of the better paid and the more skilled jobs especially in the engineering industry and on railways—is different. Here also, recommenda-tion by a foreman or a headman is an important factor but in most cases the recruitment is direct because the type of man required is generally available on the spot. On railways, a contract for a period of apprenticeship is almost always entered into. The terms of these contracts vary according to the types of apprenticeship. The periods of apprenticeship vary from two to five years according to the jobs for which the apprentices are trained.

As far as recruitment of the ordinary unskilled worker is concerned, the rapid industrialisation of many towns is creating a nucleus of permanent town dwellers and such of these as are out of employment have got into the habit of invading mill and factory gates in the mornings in the hope of securing substitute employment or of getting into a permanent vacancy. This labour is somewhat independent of the jobber but not entirely because they must keep in his good graces in order to continue in the employment which they are able to secure.

Existing methods of recruitment in Indian industries have received general condemnation on all sides and the Royal Commission on Indian Labour have devoted much space in their report to this question. For the guidance of employers, the Commission made the following recommendations :---

- (a) Jobbers should be excluded from the engagement and dismissal of labour;
- (b) Whenever the scale of a factory permits it a labour officer should be appointed directly under the general manager. His main functions should be in regard to engagements, dismissal and discharge:
- (e) Where it is not possible to appoint a whole-time labour officer, the manager some responsible officer should retain complete control over engagements and dismissals;
- (d) Employers' associations in co-operation with trade unions should adopt a common policy to stamp out bribery;
- (a) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision ;
- Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to get back their old jobs on their return. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

reports as are available it is gathered that the system wherever introduced has been unqualified success. It may therefore that appointments anticipated of labour officers will be more widely resorted to in the near future. The Bombay Millowners' Association, in anticipation of the Commission's recommendations in the matter instructed their affiliated mills in January 1930 to introduce wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. They also re-commended the introduction of a system of granting discharge certificates to contain a complete record of a worker's service and to demand the production of such certificates before engaging new men. Messrs. E. D. Sassoon and Company, Limited, in 1933, introduced a system of decasualisation in connection with their substitute labour for the eleven mills which they control in Bombay City. Each mill makes a monthly estimate of the number of temporary men which it is likely to engage during the month and issues employment cards to the required number. These men present themselves at the gates of their respective mills every morning and substitutes are engaged only from such men as have had these employment cards issued to them. This system which is now known as the Badli Control System has been officially adopted by the Bombay Millowners' Association and is universally followed by all cotton mills in Bombay City under the supervision of the Association's Labour Officer

RECRUITMENT OF PLANTATION LABOUR FOR ASSAM.

One of the earliest pieces of labour legislation in India was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of indentured labour for the tea plantations in that province. Owing to attering conditions, it had not been possible for many years to subject plantation workers to penal contracts and although several attempts had been made to improve the law by amendments of the main Act in 1908, 1915 and 1927 and by the issue of rules and regulations, these proved to be abortive and ineffective and the law on the subject became extremely confused. The whole question was subjected to a thorough examination by the Government of India and the provincial Govern-ments in 1923-28 and by the Royal Commission on Indian Labour in 1929-30. The Commission recommended that the existing legislation should be replaced by a new enactment which should provide: (a) that no assisted emigrants from controlled areas should be forwarded to the controlled areas should be forwarded to the Assan tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the local Government; (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of In pursuance of the Royal Commission's depots at necessary intervals; (c) that recommendations in the matter, several large the power conferred by section 3 of the 1901 organisations in India have appointed special act to problibit recruitment for Assam in partialabour officers to recruit and to look after the cular localities should be withdrawn immediately

(d) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other provinces; (e) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the grounds of health, unsuitability of the work to his personal capacity or for other sufficient reason; and (f) that in the event of the recrudescence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed garden-sirdars and licensed recruiters. The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act which was passed in September 1932 and brought into effect from the 1st April 1933.

THE TEA DISTRICTS EMIGRANT LABOUR ACT, 1932.

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV). Employers are prevented from re-cruiting otherwise than by means of certificated garden-sirdars or licensed recruiters. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. A married woman who is living with her husband may only be assisted to emigrate with the consent of the husband. effect WAR given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatria-tion of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer, the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as Controller may fix (sections 13 and 15). Section 3 of the Act makes provision for the appointment of a Controller of Emigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrant Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Governor-General may determine for each year of levy. The ceas is collected by the Controller by the sale of certificates of emigration. Every assisted emigrant has to be provided by the employing interest on whose behalf he was recruited with

such a certificate. All particulars about the emigrant together with a running record of the details of his employment in Assam are given on it. Failure to provide a certificate is punishable with a fine which may extend to Rs. 500. The rate of ceas has been reduced by the Government of India from Rs. 5 to Rs. 3 for the year 1st October 1938 to 30th September 1939. The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam in fencessary.

Statistics and information with regard to the number of emigrants, conditions of life, health and work and wages of labourers working on teaplantations in Assam are contained in the Annual Administration Reports on the working of the Assam Labour Board until 1933 and of the Controller of Emigrant Labour after 1934.

A good state of affairs is shown to exist in Indian plantations by the 1937 Annual Report on the working of the Tea Districts Emigrant Labour Act. The Province of Bombay continued to be an uncontrolled emigration area but notwithstanding this, 567 souls were recruited from this area during 1937. Recruitment during the year, however, was mainly carried on in the controlled emigration areas of Bengal, Bihar, Orissa, Madras, the United Provinces and the Central Provinces and Berar. The total number of souls recruited in 1937 amounted to 26,083 as against 23,175 during 1936. Recruiting costs for the year were Hs. 63-15-0 per soul and Rs. 83-12-0 per adult.

The total population of adult labourers working and not working on tea estates in Assam was 601,865 at the end of 1937 and of children 532,269 making a total population of 1,138,634. The average monthly earnings of men, women and children settled on the gardens amounted to Rs. 7-3-5, Rs. 5-13-7 and Rs. 4-4-7 respectively, in the Assam Valley and to Rs. 5-10-11, Rs. 4-1-10 and Rs. 2-12-9 respectively, in the Surma Valley. The birth rate was 36-58 against 22-92 deaths per mille in 1937 as compared with 36-65 and 22-80 respectively in the previous year.

The tea garden population consists mostly of Hindus, Christians and Animists. The number of Muslims is insignificant. Proper facilities are given to the labourers for the observance of their respective rites and religious festivals in all gardens. Facilities for playing football, kockey and other outdoor games are also afforded by several gardens.

We have received information as we go to Press that the Government of Assam have instituted an Enquiry Committee with the following members to obtain and sift all possible information regarding the frequency of strikes and disturbances in the tea gardens in Assam:—

Mr. S. K. Ghosh, Controller, Emigrant Labour, Chairman;

Mr. F. W. Hockenhull, representing the Indian Tea Association;

Mr. Baldyanath Mukherjee, representing Indian Planting Interest; Mr. Arunkumar Chanda; and Mr. Debeswar, Sarma.

LABOUR IN INDIAN MINES AND THE MINES ACTS.

The conditions of employment of labour in Indian mines are governed by the Indian Mines Act, 1923, as amended by the Amending Act of The Act of 1923 which came into force from the 1st July 1924 replaced the earlier enact-ment of 1901. The Act of 1901 contained provi-sions designed to secure safety in mines and it provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. This defect was first remedied by the 1923 Act, section 23 of which prescribed maximum limits of 54 hours per week for underground and 60 hours per week for aboveground workers. No limits were prescribed for daily hours. As some mining managements preferred to have longer week ends off and others to work their mines by shifts, the maximum weekly hours were crowded into as few days as possible and excessive daily hours continued to be worked. There were consequently insistent demands from the representatives of the miners for the fixation of a daily limit and the Government of India therefore introduced a Bill in the Legislative Assembly in March 1927 to fix a maximum limit of daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight-hour day and this was also the opinion of a minority of the Select Committee appointed to examine the Bill. The majority of the Committee, however, adhered to the principle of a twelve-hour shift as proposed in the Bill but agreed that an eight-hour shift should be gradually worked up to and they recommended a re-examination of the whole question after the new provisions had been in operation for a period of three years. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 which was brought into effect from 1st April 1930.

The Royal Commission on Indian Labour which reviewed the whole position came to conclusions similar to those reached by the Select Committee. A minority of the Commission advocated an 8hour day while the majority favoured a 12-hour day but they suggested that weekly hours aboveground should be reduced to 54. In the meanwhile, the Fifteenth Session of the Interna-tional Labour Conference adopted a Draft Convention concerning hours of work in coal mines, framed solely with reference to conditions in European countries, and this Convention pres-cribed that the hours of work should be limited to 72 per day in underground coal mines and to 8 hours a day and 48 hours a week in open coal mines. The Convention was placed before the Legislative Assembly on the 24th February and before the Council of State on the 22nd March 1932 and resolutions were adopted by both chambers to the effect that Government should re-examine the whole position. The Government of India accordingly referred the matter to all local Governments and on receipt of their replies introduced a Bill in the Legislative Assembly on the 22nd January 1935 for a further limitation in mining hours. It was passed in the same session and was brought into effect from the 1st October 1935. The main provisions of the 1935 Amending Act are as follows !---

- (a) No person is to be employed in a mine for more than six days in any one week.
- (b) No person employed aboveground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day; and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day apread over more than eleven hours.
- (c) The periods of work of a person employed below ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work and where work below ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the surface.
- (d) The employment in any mine of children under fifteen years of age is prohibited.
- (e) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

PROHIBITION OF THE EMPLOYMENT OF WOMEN IN MINES.

The Government of India promulgated regulations under section 29(j) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the sait mines in the Punjab with effect from the 1st July 1939 and in all other mines with effect from the 1st July 1929. As the summary exclusion of women in the main coal fields would have resulted in a very serious dislocation in the industry, a principle of gradualness was laid down and it was prescribed that in mines in certain provinces women may still be employed underground up to 1939 provided that the total number of women so employed at any time in any mine does not exceed a gradually decreasing percentage of the total number of both men and women employed underground. The annual decrease was to be 3 per cent, in coal and 4 per cent. in salt mines. of females employed underground in mines since 1929 has been as follows:

1929-24,089; 1930-18,684; 1931-16,841; 1932-14,711; 1933-12,799; 1934-11,198; 1935-9,551; 1937-7,301; 1938-3,887.

HOURS OF WORK AND CONDITIONS OF EMPLOYMENT.

If one is asked what is the most remarkable existence of innumerable variations, the reports feature in Indian industry the unhesitating answer would be, 'the existence of a bewildering India. variety of conditions of work and employment. These vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry and in the same centre. One would imagine that it should be possible to find some standardisation of conditions in units which are under the same administration such as in Government railways which are under the control of the Railway Board; or, in concerns of types which are affiliated to large and influential associations. If a similarity of conditions is to be found in two or more units this would be due more to coincidence than to intention. The assertion of individuality and a strong dislike of change are the keynotes to the proper understanding of the lack of standardisation in industrial conditions in India, and old customs die hard. To attempt an adequate description of conditions of work and employment under the thirty odd heads into which this chapter is divided for each of the scores of industries which exist in India would require space greater than that given to all the subjects which have been dealt with in this volume. The situation is further complicated by the fact that conditions vary widely between organised and unorganised concerns and also as between concerns conducted on the one hand by Government, local and public bodies and on the other by private indivi-duals and companies. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information can be found. As far as the latter is concerned, we may at once state that the report of the Royal Commission on Indian Labour and the various appendices to that report containing the oral and written evidence of the Government of India, the Railway Board, the various provincial Governments and other bodies and persons contain a great deal of information on a host of subjects. The descriptions of the conditions existent in 1928-29 which are contained in that report are, however, somewhat out of date. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries annually compiled by the Government of India on the basis of these reports give valuable information on hours of work, etc. Information on conditions in Indian mines is contained in the annual all-India mines administration reports. The last word on almost all phases of conditions of work and employment is, however, contained in the series of four admirable reports published by the Government of Bombay in connection with the General Wage Census conducted by the Bombay Labour Office in all the perefinial factories of the Province of Bombay in 1934. These four reports cover (1) the engineering, (2) the printing, (3) the textile (cotton, silk, wool and hostery) and (4) all the remaining perennial factory industries. It is true that these reports are of a somewhat limited character in so far

are fully indicative of conditions in the whole of

HOURS OF WORK.

The existing restrictions in hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described in the sections dealing with those Acts. Speakling broadly, hours in perennial factories are limited to 10 per day and 54 per week and in seasonal factories to 11 per day and 60 per week. The cotton textile industry in almost all centres works a uniform 9 hour day except in a few concerns whire work a 9[‡] or 10 hour day from Mondays to Fridays and a 5[‡] hours or 4 hour day on Saturdays. A recent development in the cotton textile industry is to work shifts on the basis of what is known as The Relay System. By this system a unit does not stop work during the noon recess and continues working throughout a whole shift, different batches of workers being given rest intervals by turns and the remainder being asked to do double substitute work for the time being. Messrs. E. D. Sassoon & Co., Ltd., in certain of their cotton Mills in Bombay City, have been working three shifts of seven hours each for the isst four or five years; but conditions in these, Mills are highly rationalised: that is to say, more machines are alloted to each workersiders being asked to mind two sides and weavers six looms as against the normal of one side and two looms. As far as the Jute Mill industry is concerned, the Indian Jute Mills Association entered into an agreement intended to protect and defend the trade of the Indian Jute Mills which came into force on the 15th March 1989 for a period of five years in the first instance. The hours of work are ordinarily limited to forty-five per week. If 75 per cent. of the signatories vote for reduction, the hours of work may be reduced to a minimum limit of 40 hours per week and if 51 per cent, of the signatories vote for an increase the hours may be raised to a maximum limit of 54 which may be exceeded only under extraordinary circumstances such as a cycle of prosperity or war. Under such conditions Mills with 270 looms are entitled to work up to 72 hours per week. If one unit in a "group of mills" (i.e., under the same management does not work the full complement of hours allowable, it may transfer the unutilised number of hours of work to the other unit under the same management. All the dockyards, many of the larger engineering and almost all the railway workshops work a 48 hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approxi-mate more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act as also do oil and sugar mills. Almost all seasonal factories work a uniform 10 hour day for as territory is concerned, but owing to the all the days in the week except on the compulsory rest day which is not always on a Sunday | year ending 31st December 1987 for all factories especially in the districts where factory owners | subject to the Factories Act, 1934 gives the endeavour, as far as possible, to close on the following summary table regarding hours of local bazard asy. The "Statistics of Factories" | work in all factories in India:—

Percentage of factories in which normal weekly hours are :-

	Not above 42	Between 42 & 48	Above 48			Not above 48	Between 48 & 54	Above 54
Perennial. For Men For Women	6 11	24 18	70 71	Seasonal. For Men For Women	::	25 33	13 11	62 56

shifts the different shifts changing over

In all cases where continuous production every week or fortnight. The change-over is is necessary such as in electricity generating so arranged that every workman gets a rest plants and certain water pumping stations, period of at least twenty-four continuous hours work is arranged on a system of three lonce in one week.

The hours of work in Indian Mines vary widely and range from 38 to 54 hours per week. The following table sets out the average hours worked per week in underground workings in some of the more important mining fields in India during the year 1937.

Miner	Over-	Miners.	Loaders.	Skilled Labour.	Un- skilled Labour.	Women.

In open workings and on surface the weekly hours are slightly higher.

sheds have also recently been classified as facto-ries and work in these large sheds is arranged on the basis of three shifts of eight hours each. In the smaller sheds where work is of a fairly intermitent character, systems of two shifts of twelve hours each obtain but the work of the individual is so arranged as not to work each operative for more than 8 hours. As far as the hours of work of other classes of Railway servants are concerned, the Indian Railways Act, 1890, was so amended in 1929 as to empower the Governor-General in Council to make rules for the limitation of hours of work of and of grants of periodical rests to certain classes of railway servants. Under the new powers, the Railway Servants Hours of Employment Rules, 1931, were promulgated and put into effect. These were promulgated and put into effect. These provide a 60-hour week for persons engaged in continuous work and an 84-hour week for employees whose work is of an essentially intermittent character. Persons in positions of supervision and management or who are already subject to the limitations imposed by other

As far as railways are concerned, hours of work and of a specially light character are excluded in railway workshops are controlled by the from the operation of the rules. The Report Indian Factories Act. Most of the larger running of the Supervisor of Railway Labour for the year 1937-38 states that the number of those who occasionally or habitually work beyond their rostered hours is limited to certain well defined categories of staffs such as goods clerks and the interior staff of the Transportation Department who are called upon to do the loading and unloading of "smalls" in addition to their normal duties. Many "intermittent categories have now been classed as "continuous."

There is at present no legal restriction on the hours of work of dock labourers in India and the Royal Commission who examined the question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day, overtime being paid for at 831 per cent, over ordinary rates. On circulation of these propressibly the Government of India, most of the provincial Governments affected were of opinion that under the aristing organisation of dock labour in India, legislation for the control of Acts such as in rallway workshops, running hours was not practicable owing to the insur-staffs and watchmen, watermen, sweepers mountable difficulties which would be experienced and gatekeepers whose work is both intermittent; in enforcement. The authority of the Karachi Port were thereupon advised to try out an to daily rated workmen and piece workers in improvised method of decasualisation which would involve registration of all dock workers. Stevedore labourers have however, as a result of considerable agitation by their unions, succeeded in securing a reduction in their hours of work from 12 to 14 hours per day to nine to eleven hours per day.

As far as the industries not specifically dealt with here are concerned, the hours of work in the case of certain individual units may, by the standards of to-day, be considered excessive but the existing regulation of the hours of a large percentage of industrial labour in India has had a very salutary effect in bringing about a general reduction to more normal standards in the case of the non-regulated industries and concerns.

HOLIDAYS WITH PAY.

The question of allowing industrial workers the right of having annual holidays with pay has recently become of international interest owing to the twentieth session of the International Labour Conference held in June 1936 having adopted a draft Convention on the subject of annual holidays with pay. The applica-tion of this Convention is of an exceedingly wide character and it is intended to cover almost every class and type of industrial and commercial worker. By virtue of Article 2 of the Convention, "every person to whom this Convention applies shall be entitled after one year of continuous service to an annual holiday with pay of at least six working days." The Indian Legislative Assembly by a resolution adopted on the 26th January 1937 decided that India should not ratify this Convention.

In India, holidays with pay are enjoyed only by a very small percentage of the population; but, owing to the preponderance, in numbers employed, of the workmen in Government and railway factories and in the factories ment and railway factories and in the factories owned by public and local bodies and public utility companies, the engineering industry in India easily outstrips all other industries in the leave with pay privileges which are enjoyed by its workers. The leave rules of different content of the content of t administrations vary widely, and different sets of rules are adopted not only for different classes of employees of the same administration but also for the same or similar types of employees, according to the dates when they first joined service.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay-in the case of the concerns under the Government of India, according to the Fundamental Rules; and for the factories owned and controlled by the local Governments according to the Civil Service Regulations in force at the time in the different provinces. Daily rated employees and certain categories of menials and piece-rated workers are governed by special orders suited to each case. According to the rules which are in operation at present, the minimum period of leave with pay which can be carned by all permanent Government servants is more than one month for every eleven months of duty plus grades or classes and the number of posts in ten to twenty days casual leave in every calendar each grade is fixed; but the basis of grading varies year. To cite an example of special leave rules idely between the different administrations, for certain categories, reference may be made Promotion from a lower grade to a higher usually

all ordnance and clothing factories of the Army Department of the Government of India who since 1981 get 10, 15 or 20 days leave with pay every year according to whether they have put in three to ten, ten to twenty or over twenty vears' service.

The leave rules for railway workshopmen who joined before the 1st September 1928 vary not only between railway and railway but also according to the dates when the men were first according to the dates when the men were irre-engaged. As far as the workmen who joined after 1st September 1928 are concerned, all railway systems appear to have accepted the principle of a standardisation of conditions on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal. One big company-owned railway grants fifteen days casual leave in a calendar year plus Empire Day and King's Birthday or any 17 paid holidays in addition to the above privileges to all workshop employees irrespective of a qualifying minintum period of service.

The information collected on the question of leave with pay by the Government of Bombay for the purposes of its General Wage Census in perennial factories in the Bombay Presidency showed that out of 221 engineering concerns snowed that out of 22 engineering contenus in the Presidency, 72 employing 28,502 workers or nearly 60 per cent. of the total number employed grant leave with pay to most of their workers and that another 13 employing 6,800 workers or 14.09 per cent, employed in the industry grant leave with pay to certain categories only.

In cotton textile and jute mills certain categories of workmen on the mechanical and subordinate supervisory establishments are granted varying periods of leave in most units. Leave with pay to workmen is granted by a few large corporations such as the Burma-Shell Corporation. General Motors (India), Ltd., and the Tata Hydro-Electric and Power Companies, etc. Taking all Indian industrial workers as a whole, it would perhaps not be incorrect to say that barely five per cent, enjoy leave with pay privileges.

PRINCIPLES OF WAGE FIXATION.

Wage rates in the industrial countries of the West are mostly based upon union rates-accepted both by employers and employees-trade agreements, awards by arbitration or conciliation boards or, in countries which have Trade Boards Acts for the fixation of wages in unorganised industries where association of workmen is weak, upon the decisions of Trade Boards. In India. the bargaining power of the workman, owing mainly to his illiteracy, is very weak, and the employer is more or less free to fix any wages which he likes or, at the most, to bargain with his prospective workman. The labour costs in all Government and railway concerns and in the establishments run by local or public bodies, however, have to be accurately budgeted for and in such concerns wage rates are fixed. Each occupation is divided into a number of depends both upon merit and the passing of of borders and dobby designs. Certain units, trade tests and is not automatic. The rates for the different grades are determined by "professional officers" as in the case of His Majesty's Indian Naval Dockyard or on infor-mation published by Government departments of industries and labour. In privately owned concerns, the governing factors in wage fixation are the demand for and the supply of the type of labour required, personal efficiency and current rates in the locality where a concern is situated but once a worker's rate has been determined, it is not varied unless a general increase or cut is applied to a whole establishment or a department of the establishment.

TYPES OF RATES AND ALLOWANCES.

Wage rates in the West are generally either consolidated hourly time rates or piece rates and the calculation of earnings from such rates is both simple and easy. Some progress has been made in India during recent years in the direction of payment of wages on the basis of hourly rates in a few large engineering concerns but this form of payment is very rare. The most common types of payment of time rates are daily rates or monthly rates; and, in some cases, where wages are paid weekly or fortnightly, weekly or fortnightly rates. The calculation of earnings from hourly or daily rates does not offer any difficulty except in the case of daily rates in concerns which work a short Saturday. Here, some concerns pay half the daily rate or prorate the daily rate for number of hours worked or the full rate for number of hours worked of the days from Mondays to Fridays or the Thudray and the Friday have been put in. Calculation of earnings from monthly rates, on the other hand. used to be so devised as, generally, to deprive the monthly paid worker of a part of his dues. Some concerns calculated earnings from monthly rates on the basis of all the days in the month and deducted pay for the weekly holiday. Others made payment for the weekly holiday conditional on the Saturday or Monday or both having been put in. Still others paid wages for one, two or three Sundays (but not for all) on the condition that certain specified numbers of working days in the month concerned were put in. A few calculated earnings pro rate the number of working days in the month. Thus the Payment of Wages Act. number or working usys in onth would receive Rs. 24 for 24 days work in a 27-day month. The Payment of Wages Act makes the last method obligatory on all concerns which pay on monthly rates of wages. In certain cases monthly rates are for the Hindu calendar month or a month of so many hours, as in the case of the G. I. P. Railway where monthly rates are for a month of 208 hours, or for a 'book month' of so many complete weeks.

Calculations of earnings from piece rates offer Calculations of carnings from piece rates one; often go up to more cash under of complicated such they are the exceedingly complicated in cotton weaving.

In India, the Factories Act, 1934, requires that the exceedingly complicated in cotton weaving. statutory weekly hours shall be a-time-and-assome mills pay on the basis of weight, others on length. The rates vary according to reed and-a-half for hours in excess of 60. These apace and picks to an inch and are further provisions are, however, applicable only to complicated by allowances for different types

especially in the printing industry have task rates which are a combination of time and piece rates. Certain engineering concerns in India have introduced the Halsey Weir or the Bedaux point systems of payment.

Allowances .- The textile industry in the Bombay Presidency still adheres to the principle of granting war or dearness allowances over basic rates prevalent in some year between 1914 and 1918. Up to 1933, all mills in Bombay City paid a moghwari or dearness allowance of 80 per cent. for piece rated men and of 70 per cent, for time rated men and all time and piecerated women. In that year the Mill owners' Association, Bombay, permitted its affiliated members to take independent action in the matter of wage reductions. Certain mills reduced basic rates, others reduced the allowances and still others effected reductions in both basic rates and allowances. Although up to 1933 the rates of allowances were universal, basic rates varied widely between mill and mill. Today, both basic rates and allowances vary although the Association has successfully attempted to standardise basic time rates in certain of the more numerically important unrationalised occupations on the basis of consolidation. The allowances in textile mills in the Bombay Presidency outside Bombay City vary both between centre and centre and occupation and occupa-The tendency in industries outside the textile has been towards consolidation but certain railway systems grant grain allowances in addition to rates of pay for certain categories of employees with low rates of wages.

Bonuses .- The system of paying good attendance bonuses was widely prevalent in several industries in India up to a few years ago but they were tending to disappear during the last few years. In November 1937, the Government of Bombay held that the effect of the definition of "wages" in the Payment of Wages Act is to incorporate into wages any bonus that may be offered by the employer for good attendance, good work, good production or matters of that kind and that such bonuses become payable whether the conditions governing the sarning of the bonus are fulfilled or not. This point was tested in a court of law in Ahmedabad and went to appeal. A brief description of the case has been given in the section dealing with

Overtime.—The term "overtime," in general parlance, is applied to all extra time put in by a worker outside his normal specified daily hours of work, and in England and many other industrial countries is remunerated at higher rates which vary according to whether the overtime was worked immediately prior to overtime was worked immediately prior to normal starting or after normal closing, during the luncheon hour, at night, on a Saturday afternoon or on a Sunday or a holiday; and often go up to more than double ordinary rates. In India, the Factories Act, 1934, requires that from the restrictive regulations have been India, in consultation with the provincial Govern-allowed. Legally, as long as the daily or ments and interested persons and bodies, on weekly statutory hours are not exceeded, an employer need pay nothing extra for overtime years. Attempts were also made to amend the work outside normal hours, and in practice very few employers do so. On certain railways where monthly rates are for a month of 208 hours, all time—both ordinary and overtime—is credited to the normal hours' account and payment at overtime rates does not come into consideration until such time as the monthly hours are exceeded. Where overtime rates outside the requirements of the Act obtain, these are generally a time-and-a-quarter the ordinary rates, but very few concerns indeed pay enhanced overtime rates for extra time beyond normal daily hours. In many cases workers are called upon to put in compensatory time after normal hours for time lost owing to late attendance or absence and in others workers who put in overtime are asked to take compensatory time off during specified working hours on the day following that on which overtime was worked. These methods mean that the same rate is given for both normal and overtime work. In many other cases, no additional remuneration whatever is paid for overtime outside normal hours.

PAY PERIODS AND WAITING PERIODS.

There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in India. In scarcely any industry is there a single period of payment. Different systems are found in establishments belonging to the same industry and in the same district; and within the same establishment different classes of workers are paid for different periods. If generalisations may be attempted, the jute industry in Bengal, coal mines, tea plantations, seasonal factories, oil mills, rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week. Payments on a fortnightly basis range between payments for haptas or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres in India. The month is the accepted wage period for the railways (including railway workshops), cotton textile mills in Bombay, Sholapur and several other centres, antiplacentary workshops described engineering workshops, dockyards, printing presses and for the persons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly. Wages are calculated on both the monthly and the fortcalculated on both the monthly and the for-nightly bases in the iron and steel industry and in sugar mills and tanneries. The most general system of payment in the case of casual labour is that of daily payment. Supervisory and elerical staffs in all industrial establishments are paid on a monthly basis.

three different occasions within the last fifteen Payment of Wages Act in such a way as to achieve this object. The proposals, however, fell through owing mainly to the opposition of the monthly paid workmen who appeared to prefer the system of monthly to fortnightly or weekly payments. Their argument was that if rents and bills were to be settled monthly they would be in difficulties if they had frittered away their weekly earnings.

Periods elapsing before Payment,-The 'waiting period' or the time which elapses between the end of the period for which wages are earned and the date of payment varied considerably as between industry and industry and between establishments in the same industry. The longest delays were associated with concerns which paid wages monthly and in some cases extended to as many as 30 to 40 days following the date on which wages fell due. The Payment of Wages Act prescribes that wages in all factories employing 1,000 or more persons must be paid within ten days and in factories employing less than 1,000 persons within seven days of the end of the period for which wages fall due.

SUPERANNUATION BENEFITS AND FINANCIAL AID.

The subjects which fall under this section are pensions, gratuities, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions .- All monthly and time-rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of nine years' service has been put in. The amount of the pension due is arrived at by multiplying the average monthly pay for the three years preceding retirement by the actual period of active service less one year and dividing the product by 48. Where permanent monthly paid workers on piece rates are admitted, the average monthly pay is arrived at on the basis of the earnings for 72 months and the divisor in the above formula is 72. Commutation up to 50 per cent. of the amount of the monthly pension is permitted in certain cases. Outside Government concerns, pensions on retirement are almost non-existent although many concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly ex gratia and cannot be claimed as of right.

Gratuities.—All railway employees and the employees of local and public bodies and a few of the larger public companies receive gratuities on retirement. Gratuities are also paid to nonpensionable workers who have put in not less pensionable workers who have put in not less than thirty years' service in Government concerns. In all cases specified periods of qualifying service have to be put in before gratuities can be sarned. The rules of individual administrations vary widely but the most generally accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants who have put in less than all a very well as the payment of the control of t The question of shortening the wage period who have put in less than nine years' active universally in India by law to a week or a fortingth has been considered by the Government of pelled to retire on medicate,

Provident Funds.—These are of two kinds: | ployer's subscriptions depends on the putting in (1) contributory, where both the employer and (2) nonsplitting in the employee subscribe to them; and (2) nonsplitting the employee alone subscribes

| Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Constraint Contributory where the employee alone subscribes | Contri to them. Certain Government servants who by the terms of their contracts are not eligible for pensions are compulsorily required to subscribe to the contributory section of the General Government Provident Fund. In such cases both Government and the Government servant concerned subscribe one month's pay each per year to the fund. All pensionable Government servants except certain classes of industrial workers and menials have the option of subscribing to the non-contributory section of the fund, subscriptions to which vary from 12 to 30 pies to the rupee of income at the option of the subscriber. Very few industrial workers of Government, however, take advantage of this section of the fund mainly because, apart from the compound interest which his subscriptions earn, the worker does not stand to gain anything on his outlay.

In cases where large bodies of non-pensionable Government servants are brought under the operation of contributory provident fund schemes, special funds such as the State Railways Provident Fund and the Indian Ordnance Factories' Workmen's Provident Fund, which are governed by special rules, are formed. Company owned railways have schemes similar to that for State railways. Whereas it is obligatory for most categories of permanent nonworkshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised, no withdrawal is permitted.

Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust; whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata electricity generating and distributing plants, the Bombay Electric Supply and Tramways Company, Ltd., and the Burma-Shell Corporation, to mention only a few of many, provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen. The most usual amount of deduction from pay is one-twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent. to 100 per cent. of the amount put in by the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money. All provident fund rules make provision for loans to subscribers from the balances standing at the credit of their accounts in respect of their own subscriptions, and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory proof high prices in India in 1919-22, several large vident fund account which represents the emindustrial establishments all over the country,

Co-operative Societies.—The co-operative move-ment has made very rapid progress in industrial establishments all over India during recent years, and a very fair percentage of concerns employing 500 or more workers have co-operative credit societies for their employees. Almost all railway systems in India have co-operative banks and savings banks in addition to credit societies and full information on the whole subject is available in the different annual administration reports of Registrars of Co-operative Societies in the various provinces. It is impossible to attempt even a brief summary of the movement here but a few details regarding one of the best of such societies would be of interest.

The Jackson Co-operative Bank on the B. B. & C. I. Railway is perhaps the biggest and the best managed co-operative credit society of industrial workers in India. During the year ending 30th June 1938 it had a membership of 36,474 with a share capital of Rs. 4.08 lakhs and a reserve fund amounting to Rs. 3.58 lakhs. It receives both fixed deposits and ordinary deposits in its savings bank branch; and it also issues cash certificates to all railway employees earning Rs. 125 or less per month. Fixed deposits for the year ending June 1937 amounted to Rs. 25.74 lakhs and savings bank deposits to Rs. 33.28 lakhs which, together with capital, gave the society a working fund of Rs. 70,30 lakhs for the year. The number of new loans issued during the year amounted to 15,300 and involved a sum of Rs. 52.94 lakhs. The bank has been declaring a 10 per cent. dividend (which is the maximum payable under the Co-operative Societies Act) for the last ten years. A special feature of the activities of the Bank is a new scheme which it has recently introduced for redemption of debts. Members of the society who are in debt are encouraged to bring a complete list of their debts to the Bank which, with the assistance of the Staff Officer of the Railway, interviews all creditors and arranges with them to compound the debts for much lesser sums in return for ready payment. The total amounts so paid to members' creditors are treated as loans and recovered in easy instalments spread over 72 months. The Bank also contributes an amount of Rs. 10,000 annually to a special Staff Welfare Fund started by the railway administration at the instance of the Bank " to look after the welfare of the staff in general and of low paid staffs and their families in particular." Welfare centres which have been opened at various stations on the line render help by way of supplying milk to the children of the needy, by nursing the sick and by opening hygiene clinics. In commemoration of its Silver Jubilee, the Bank started a Silver Jubilee Benevolent Fund in 1938 out of its past accumulated surplus profits of Rs. 1,79,849 to which additions are to be made from future surplus profits. The sole object of this fund is to ameliorate distress among the widows and children of deceased members drawing a salary of Rs. 80 per month or under who may be left in indigent circumstances.

and particularly the cotton textile mills in Bomhay City, conducted cheap grain shops for the benefit of their work-people. In addition to supplying grain at cost price (the units concerned bore the cost of management) these shops had the advantage of offering sales on credit to be liquidated by deductions from due wages. With the fall in prices the majority of these shops disappeared and last year a very few establishments indeed had them. Many textile mills all over the country, however, had cheap cloth shops for their workers. It was thought that all types of these shops would have to cease functioning because the Payment of Wages Act prohibits employers from making deductions from pay due or receiving payments from their employees for purchases from employers' shops. This is in accordance with one of the main cardinal principles of Truck legislation. At the moment of writing, however, it is understood that certain provinces are permitting such shops as "amenities" for sales for which deductions from wages may be made.

Loans and Advances .- Speaking generally most industrial concerns in India do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'-applying the term to the small sums of money advanced against earned wageson the other hand, are more widely prevalent. The Payment of Wages Act empowers local Governments to frame rules for the regulation of these advances but no interest on such advances is now permitted.

MEASURES FOR ENFORCING DISCIPLINE.

The measures adopted by industrial employers in India for enforcing discipline have engaged the earnest attention of both the Central and the Provincial Governments in this country for the last ten years. Early in 1926, the Government of India asked all local Governments to make enquiries, in their respective administrations, into the extent of the deductions made by employers from the wages of their workpeople in respect of fines and other matters. The Government of Bombay conducted an extensive enquiry into the subject in the Bombay Presidency and as a result of their investigations came to the conclusion that abuses sufficient to justify legislative action for their control were prevalent. The subject was partly examined by the Bombay Strike Enquiry Committee (Fawcett Committee) in 1928-29 and again more fully by the Royal Commission on Indian Labour in 1929-30 and

Act, which has already been dealt with in an earlier section, was passed in 1986, in order to implement these recommendations.

The two matters with regard to the discipline of their workmen which Indian industrial employers complain of most are the large extent of fabour turnover and the high degree of absenteeism. Indian employers state that it is inherent in the Indian workman to make frequent changes in his employments and also to resort to frequent abstentions from work. That both high labour turnover and high absenteeism are to be found in several Indian industries cannot be denied; but, few, if any, employers have taken the trouble to examine the root causes for them. The investigations conducted by the Labour Office of the Government of Bombay go to show that both labour turnover and absenteeism are highest in concerns and industries in which wages are lowest and where conditions of employment are least attractive and that they are lowest in concerns and industries in which wages are comparatively high and where other conditions of employment are attractive. For example, the Bombay Labour Office compiles monthly figures of percentage absenteelsm in cotton textile mills in Bombay, Ahmedabad and Sholapur. Textile wages are highest in Ahmedabad and lowest in Sholapur. The annual averages of percentage absenteeism in these three centres for the year 1938 were: Ahmedabad 3.29, Bombay 8.30, and Sholapur 10 78—figures which tell their own story. Low wages and adverse conditions must necessarily tend to weak health, incapacity for sustained effort and to the growth of a desire for change in order to improve one's lot. These are problems which the new autonomous provinces in India and Indian industrial employers will have to try and remedy instead of devising methods of enforcing good attendance and continuity of employment by the infliction of monetary penalties and other forms of punishment.

Under the Payment of Wages Act, every employer in every Industry to which the Act has been applied is required to draw up lists specifying the acts or omissions for which fines will be inflicted. These lists have to be approved by such authorities as the Local Governments may prescribe and are required to be prominently displayed in all places where the employees concerned are working. Apart from this employers were not required to draw up any Standing orders or rules of conduct governing the conditions of employment between them and their employees, and with the exception of the industrial establishments conducted by Government or Public Bodies such as Municipalities and Port Trusts and the Cotton textile mills affiliated to the Bombay Millowners' Association, very few employers in India had framed Standing Orders for operatives. The Bombay Industrial Disputes Act 1988, however, requires every employer in an industry to which the Act is made applicable to submit a draft for such Standing Orders to the Commissioner of Labour within two months of the date of the application of the Act to any industry; and the Commissioner of Labour is empowered both these bodies made a series of recommenda-tions in the matter. The Payment of Wages consulted all the interests concerned in the

industry. Appeal against the orders of the the rooms; provision of weather shades to Commissioner of Labour lies with the Industrial windows and corridor openings; the placing Court constituted under the Act.

INDUSTRIAL HOUSING.

Residential buildings in all countries are Residential buildings in all countries are constructed from the point of view of investments from which their owners hope to receive a fair interest on their capital outlay. No country in the world expects its landlords to be philanthropists in the matter of providing rentfree or cheap rented housing to such of her people as cannot afford to pay the economic rents which are asked for; and although every Government must be expected to provide decent housing for its own low paid servants, the world has not yet reached that socialistic stage where Governments are expected to provide adequate housing for whole populations. At the same time, low paid wage earners in crowded the same time, low paid wage extricts in crowded and congested industrial areas can hardly be expected to be able to afford the economic rents demanded by the landlords. In such cases there can be only two alternatives: wage levels such as will permit workmen to pay such rents as are asked for or the provision pay such rents as are asked for or the provision of adequate housing by the employer. The first does not appear to have received much consideration at the hands of industrial employers in India. The second is a lament which has been recited by almost every Commission and Committee that has been appointed in India during the last 20 years to the point of satistion; and although several benevolent and far sighted employers have endeavoured to provide housing for their workpeople a very small percentage indeed of the total industrial small percentage indeed of the total industrial population of India is housed by the employer, and the question of industrial housing continues to be one of the most vexed questions of the country.

The pioneer work in the field of industrial housing has been done by the railways which have spent nearly thirty-five crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The latter is a part of a gigantic scheme launched in 1920 by Lord Lloyd, then Governor of Bombay, for the construction of 625 chawls having 50,000 tenements in all. The rents of the tenements in these chawls vary from Bs. 5 to Rs. 8 per month. The chawls situated at Naigaum and Sewri and at DeLisle Boad are in fair demand but the majority of the tenements at the Worli chawls continued unoccupied ments at the Worli chawls continued unoccupied owing to a complaint by the workers that they were situated at considerable distances from their places of work and that the locality offered few of the amenities of city life. The Congress Ministry in Bombay, however, decided to carry out certain improvements in these chawls in order to make them more attractive and comfortable to live in. It was decided to inour an expenditure of ten and a half lakhs of rupees for this purpose of which a sum of four and a half lakhs was to be spent during

of teakwood shelves and galvanised iron pipes in each room for drying clothes; additional water storage tanks; provision of electric lights in the corridors of each chawl and also in the rooms of certain chawls for which a charge of Re. 1 per month would be made for consumption of electrical energy, etc. The Government of Bombay have also made arrangements with the Tramways Company to reduce bus fares from one anna to half an anna from Worli to Parel, Curry Road and Mahalaxmi Railway Stations, The Municipalities of Calcutta, Bombay, Cawnpore, Madras and Karachi, the Calcutta and Bombay Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low-rented tenements for other classes of industrial workers. Perhaps the most magnificent schemes of industrial housing conceived in India are those launched by the Tata Iron and Steel Company Ltd. at Jamshedpur and by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur, two miles from the mills. The idea is to establish a model village and to build houses of the bungalow type on plots measuring 30'×53' with the limitation that building is not to be allowed on more than building is not to be allowed on more than one-third of the space provided. The houses are let to the workers on the hire purchase system and it is expected that many of the workers will ultimately own them. The Tatas are in the forefront of industrial employers to be a superfect of the state of the sta are in the forefront of industrial employers in India in providing decent housing for as many of their workmen as possible and they have built 2,000 residential buildings in Jamshedpur for the staff and the employees of their Iron and Steel Works at that centre. All the workmen in their several electricity generating and distributing stations are also provided with adequate housing. Many of the jute mills in Bengal and cotton mills in Bombay City and other centres have provided housing for fair percentages of their total staffs but the majority of textile workers in staffs but the majority of textile workers in India are not housed by their employers.

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing, or where it is necessary for special reasons to provide quarters for certain classes of staff near to their work. These principles appear to be generally followed by private companies and concerns as well, especially by companies and concerns as well, especially by coal mine owners in Bihar and Orisas and by tea planters in Assam. All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses whose design, construction, ventilation and general amenities are controlled by the Jharia Mines Board of Health. Every house in the coal fields has to be licensed and licenses are not granted unless the standards are complied with, If labourers are found in occupation of unlithe year 1938-39 and the remainder in 1939-40. censed houses the management is liable to The main improvements to be effected are: prosecution. In Assam, all residential employees changing the position of window shutters in on tea estates are provided with rent-free

quarters in barracks or 'lines' as they are i called. These are regularly inspected by district and sub-divisional officers and every endeavour is made to maintain as high a degree of sanitation as is possible. Large slum clearance programmes have been drawn up by Municipalities and Improvement Trusts in almost all the larger towns and cities in India and much useful work has been done in the last two years by acquisition and demolition.

Conditions of industrial housing in India are the worst in Ahmedabad. A recent enquiry conducted by the Ahmedabad Textile Labour Union into industrial housing in that centre showed that out of a total of 23,706 tenements observed and studied, 5,669 had no provision of any kind for water and that 3,117 had only a supply of some sort from wells. Those which have the advantage of a supply from municipal sources had one or two taps in an area occupied by 200 or more familles, 5,000 tenements had no latrine accommodation and sanitation and conspicuously absent. drainage was Ahmedabad Municipality has, however, awakened to a realisation of the seriousness of the situation and it has been decided to construct model dwellings on co-operative lines for industrial workers in the city. Owing to financial considerations, progress must necessarily be slow but a beginning has already been made. The Ahmedabad Mills Housing Society, a limited liability company launched by the Ahmedabad Millowners' Association, has already built over 600 tenements. The Ahmedabad Municipality put up 100 tenements at a cost of Rs. 50,000 in 1937 while the Majur Mahajan Sangh spent Rs. 75,000 on 125 two-room tenements during the same year.

Royal Commission's Recommendations .- The Royal Commission on Indian Labour have made several recommendations in connection with industrial housing. One of the most important of these was to amend the Land Acquistion Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings. The Government of India introduced a Bill in the Legislature Assembly to enable the Land Acquistion lative Assembly to amend the Land Acquisition Act in the manner suggested.

Rest Shelters, Dining Rooms and Canteens .-Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments in India do provide tiffin rooms and rast shelters for their workmen. Most concerns have also permitted the establishment of tea stalls on the premises but apart from this little effort has been made to run cooperative canteens on the lines of those which are associated with most of the large factories in the West. Pioneer work in this direction has been done by Messrs. E. D. Sassoon & Co. in Bombay. This Company which manages eleven large cotton mills in the City has established large canteens in all their mills. The management in each case bears the salaries of staff

boarding and lodging its poor women workers. The charges are exceedingly moderate and vary from Re. 1-8-0 per month for a child to Rs. 6 for an adult. Communal factors such as the religious prohibition of Hindus to eat their food in the company of members of other communities. want of space and the constructional layout of the majority of the smaller industrial establishments are among the reasons given by the managements who do not provide rest shelters and/or tiffin rooms for their workmen.

HEALTH.

Such statistics of health and mortality as are collected and published in India relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to genera-lise about these matters. The problems associated with health are always difficult: they are much more so in a country like India where the solution of the problems associated with physical health and social environment is complicated by the evils of ignorance and poverty to which is commonly added a fatalistic outlook arising, it may be, from the low standard of living which has been the experience of so many generations past. Climatic conditions, highly insanitary housing conditions and the illiteracy of the people also contribute to re-curring outbreaks of such deadly tropical diseases as cholera and small-pox in epidemic form. The widespread prevalence of malaria in certain congested areas of the Provinces of Bengal, Bombay and Madras is responsible for a considerable undermining of the health and the vitality of the poorer classes who cannot afford to sleep under mosquito nets; and although the more advanced municipalities are doing all they can to combat the disease by filling up wells and surface-treating small ponds and pools of stagnant water, malaris still continues to take a big toll of human life. Beri-beri and tuberculosis in Bihar and Orissa, kula-azar among the jute workers in Bengal and tuberculosis in the Punjab are some of the tuberculosis in the Funjab are some of the many diseases which are widely prevalent in certain tracts. Kala-azar has been steadily gaining ground in Bengal within recent years and the figures for the quinquennium 1932-36 show that the number of cases treated in the medical institutions in Bengal rose from 105,840 to 137,791. The mortality recorded from this disease during 1936 was 68 per cent, above the average for the previous ten years.

The maintenance of the good health of town and city populations is in the hands of the municipalities and although all provincial Governments appoint health officers for groups of districts to supervise and co-ordinate the work of the municipalities, the interference and control of Governments in these matters is of a control of Governments in these matters is of somewhat nominal character. But wherever control is possible, Government have done much to make for an improvement in sanitary and hygienic conditions. For example, following the recommendations of the Royal Commission on Indian Labour in the matter, several provisions for the maintenance of the good health ment in each case bears the salaries of staff of factory workers have been incorporated in and the on-cost for equipment; and hot meals the indian Factories Act, 1934. These include are supplied to the workmen at actual cost.

The Company has also established a hostel for with rules to be framed by local Governments.

with regard to lime or colour washing, painting, deodorising and disinfecting; the provision of proper standards of ventilation and the adoption of adequate measures to prevent the inhalation of gas, dust and other impurities generated in the course of work; the installation of apparatus for cooling the air in factories in which the humidity of the air is artificially increased; the prohibition of overcrowding by laying down the standards of cubic feet of space to be pro-vided for each worker; the provision of suitable and sufficient lighting; the provision of adequate supplies and sources of water both for drinking and for washing; and for the maintenance of sufficient latrine accommodation separately for male and female workers. Remarkable progress has been recorded during the last two years with regard to the installation of air conditioning and cooling plants; progress in this direction was hitherto confined mostly to spinning and weaving sheds but during 1938 and 1939 expansions have been made in other departments as well as by installing large hoods and trunks harnessed to powerful exhaust fans, to enable the steam to be drawn away from sizing cy-linders. Attempts are also being made to reduce dirt to a minimum and many cotton mills are installing special plant to carry the dust away,

As in most things connected with the welfare of labour, Indian railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable contres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them. As all the industrial workers of Government have free access to Government hospitals and dispensaries, the provision of separate medical establishments attached to large Government establishments has not been considered necessary in the case of concerns under the control of local Governments but the Government of India have provided adequate medical facilities in most of their own establishments such as His Majesty's Indian Naval Dockyard and their various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trust also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter, almost all the large labour employing establishments in India—cotton and jute mills, mines, engineering workshops, tea plantations, etc.—maintain fully equipped dispensaries in charge of whole or part-time qualified medical officers.

It is of considerable interest to observe that the Municipality of Bombay, in their budget estimates for the year 1939-40, have set aside a sum of Rs. 50,000 for the free distribution of milk to undernourished children attending Municipal schools in the City of Bombay. All children attending such schools are to be periodically examined and those that are found to be suffering from mainutrition and who are physically weak are to be given 6 ounces of milk every day free of charge. Since March 1939 about 2,000 children are in receipt of this benefit every month,

Maternity Benefits.-A Bill introduced by Mr. N. M. Joshi in the Legislative Assembly of the Central Government in 1924 to provide for the payment of maternity benefits in certain industries was thrown out by the Assembly in August 1925, but the Governments of Bombay, Bengal, Madras and the Central Provinces passed their own Maternity Benefit Acts. The Bombay Act was amended in 1934 in such a way as to be of greater benefit to the persons concerned. Under these Acts, all women workers employed in factories are to be compulsorily rested for three to four weeks before child birth and for four weeks after child birth and employers are required to pay them a benefit amounting to about half their usual pay during this period. During the year 1938, the Government of Bombay extended the operation of their Maternity Benefits Act to women employed in all industrial concerns in the Province. The Bombay Municipality started a maternity benefit scheme for its halalkhore and scavenging women in 1928. By this scheme, the classes benefited receive a benefit of leave on full pay for a period not exceeding 42 consecutive days. In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. periods of advanced pregnancy and after child birth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at child birth is often granted in addition. This bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company and the Assam Oil Company grant six and three months' leave respectively on half pay. Several estates in the Colmbatore District of the Madras Presidency either pay lump sum bonuses in lieu of pay or feed the women concerned for a few weeks before and after confinement. Planters in Madras decided, early in 1939, to pay a bonus and bear charges in connexion with the free feeding of the mother for periods of three weeks each before entry into and after leaving hospital. Provincial Factory Administration Reports for the Bombay Presidency record that the Bombay Maternity Benefit Act is having a restrictive influence on the employ-ment of women in factories, particularly in Ahmedabad.

Provisions of crèches.—One of the many additional principles introduced in factory legislation in India by the Indian Factories Act of 1934 was one for the compulsory provision in all factories wherein more than fifty women workers are ordinarily employed of a sultable room for the use of children under the age of six years belonging to such women and for the supervision of the children in such rooms (or crèches) in accordance with rules to be framed by local Governments in the matter. Crèches are, however, not a new feature in Indian industry. Several textile mills in Bombay, Ahmedabad and Sholapur had provided them for over ten years and in many of these the children were looked after by qualified daie (Indian midwifery nurses) and were clothed and fed at the expense of the millowners. The Government of Bombay had also made provision for the adequate supervision of these crèches by the appointment of a lady Inspectress of Factories as early as 1924. Crèches were also

provided by several textile mills in other centres and in the factories attached to many of the larger tea plantations in Assam.

INDUSTRIAL SAFETY.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and for employers to report accidents more frequently than in the past. But, the increase in the number of serious accidents suggests that the problem is a more serious one; and, that in spite of the statutory requirements which factory and mine owners and firms engaged in the loading and unloading of ships have to comply with in the matter of the fencing of dangerous machinery, an organised "safety-first" campaign for the better education of the workers in the matter of accident prevention is both necessary and desirable. Under the direction of the Railway Board of the Government of India all railways in India have undertaken extensive schemes of safety-first propaganda. These include the putting up of safety posters and safeguards both in English and in the vernacular of the district at all prominent points and places; the free issue of illustrated booklets on accident prevention; publication of special articles with photographs in railway magazines; addresses and magic-lantern lectures; and the organisation of special safety-first committees in the larger workshops. The Factory Department of the Government of Bombay with the assistance of the Bombay Millowners' Association and the Bombay Millowners' Mutual Insurance Association has made good progress in the posting of safety-first posters in cotton mills in Bombay City; and the Millowners' Association in conjunction with the St. John's Ambulance Association started classes for first aid training with effect from 1931. Several other large labour employing organisations such as His Majesty's Indian Naval Dockyard, the Calcutta and the Bombay Port Trusts and the Tata Iron and Steel Works at Jamshedpur, to mention only a few, are, with railways, pioneers in the field of organisation of 'safety first' measures. It is of interest to note that most cotton mills in Ahmedabad had also established safety-first committees by the end of the year 1938.

The provisions contained in the Indian Factories and Mines Acts and in the Indian Dock Labourers Act, 1934, and the rules made under these Acts in connection with the guarding and fencing of machinery are of a too technical character to be dealt with here. It may, however, be of interest if a brief summary were given in connection with the reporting of accidents. The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occur-

in addition. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a local Government, even though no injury may have resulted therefrom to any person. The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose.

Prior to the passing of the 1934 Factories Act, some of the local Governments had framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories Section 32 (b) of the makes it obligatory over 500 operatives. 1934 Act, however, on all factory owners to maintain stores of first aid appliances and to provide for their custody in accordance with rules to be framed by local Governments in the matter.

UTILISATION OF THE WORKERS' LEISURE.

The Industrial Disputes Committee (the Stanley Reed Committee), appointed by the Government of Bombay in 1922 to enquire into the causes of the wide industrial unrest prevalent about that time and to make recommendations, were, inter alia, of opinion that employers should organise extensive schemes of welfare particularly with regard to the proper use of workers' leisure, in order to keep the workmen both contented and happy and our of mischief. In pursuance of the Committee's recommendations in the matter several cotton mills and groups of mills in the Bombay Presidency-notably the Currimbhov Ebrahim group of mills, the Sholapur Spinning and Weaving Mills and the Tata Mills—inaugurated wide Mills—inaugurated wide schemes embracing facilities for education and recreation. All these groups formed special welfare institutes and placed them under the charge of special welfare officers. Much good work was done but with the depression in trace which followed coupled with the financial difficulties in which many of these mills were involved most of the excellent schemes that had been established were either severely cur-tailed or abandoned. Today, few mills are tailed or absnooned. Today, rew mills are doing anything for the proper utilisation by their workpeople of their leisure hours. The pioneering work in this field is being done by the ratiways. All ratiway systems have established sports clubs and institutes at rence of the accident. All classes of accidents suitable distances and places for the recreation aamely, fatal, serious (i.e., accidents which of their employees. The railways provide prevent a person returning to work for 21 days land, buildings and equipment and the Institutes or more) and minor are to be reported to the are run by the members themselves from their suitable distances and places for the recreation of their employees. The railways provide Inspector of Factories and to the District Magis-trate and in cases of any accident resulting in louses and institutes are provided for officers, death to the officer in charge of the police station for non-gastited Europeans and Angle-Indians

and for Indians and in a few cases for the lower it is proposed to have a band-stand at the types of workmen as well. All forms of sports and recreation are indulged in at these institutes and railway hockey and football teams are among the finest in India.

Almost all the larger labour employing organisations such as the Bombay Port Trust, the Burna Shell Corporation, the bigger municipalities, the Tata Iron and Steel Works at Jambadepur, the British India Corporation in the United Provinces, the Empress Mills at Nagpur, etc., have devised wide welfare schemes and in many cases these are under the charge of special welfare or labour officers. In some cases grants-in-aid are given to such outside organisations such as the Young Men's Ouristian Association, the Kirkee Education Society, the Social Service League, etc., to take charge of certain sections of welfare activities particularly with regard to recreation and the education of both workers and workers'

References have been made throughout this note to the manner in which the Government of Bombay leads the other Provincial Governments in India in their zenious care of the welfare of labour. Striking proof of this is to be found in the amount of Rs. 100,000 set aside by the Bombay Government in their budget for 1938-39 for "industrial welfare" and to a further amount of Rs, 20,000 set aside for building recreation centres. An additional provision of a lakh of rupees (Rs. 50,000 for buildings and Rs. 41,000 for welfare) has been made in the Bombay budget estimates for the year 1939-40 for the same purpose. The object of Government is to provide social amenities for industrial labour in the most important industrial areas of the Province. important industrial areas of the Province.

A beginning in this direction was made by Mr.
Ramnath Podar, Managing Director of the
Toyo Podar Mil, Bombay, offering to build
a recreation payillon at Pellisie Road, Bombay,
in memory of his brother at a cost of Rs. 25,000. The foundation stone of the "Rambilas Anan-The foundation stone of the "Ramionas Anan-dial Podar Recreation Centre" was said by the Prime Minister of Bombay on the 22nd November 1938, Government are building similar centres at Naigaum and Worll. The DeLisie Road centre started functioning in March1039 as also a similar centre in Ahmedabad. Suitable sites for the same purpose are being selected in Sholapur and other textile centres. Mr. C. G. S. Ram has been appointed Labour Welfare Officer and he is assisted by one male and one lady full time and several part time and one lady full time and several part time welfare officers. The whole scheme is under the personal direction of Mr. Gulzarilal Nauda, Parliamentary Secretary for Labour to the Hon. The Prime Minister. As far as Bombay City is concerned, Government contemplate opening up thirty prohibition centres all over the city. Welfare work for industrial workers will be an important item at each of these centres.

The activities of the welfare centres will centre round the recreation pavilion which will include an auditorium, a library, a reading room, a kitchen and a restaurant. The canteen and the restaurant will be run on healthy and

Worli Centre. The pavillons will be used for lectures, for indoor games and for adult education classes which will be held at night at each centre. It is also proposed to conduct nursery schools and sewing and literary classes for women during the day time. Films will be shown and regular visual instruction given at each centre. Nor will outdoor activities be neglected. open spaces in the vicinity of the pavilions will be used for outdoor games and sports such as football, voiley ball, hockey, badminton, etc., and all the centres will be equipped with radios, ocean waves, giant strides, see-saws. swings, etc.

The Government of the United Provinces set aside sums of Rs, 10,000 (subsequently increased to Rs, 20,000) and Rs, 30,000 in their budget estimates for the years 1938-39 and 1939-40 for the same purpose. Four welfare centres were started in 1938 and two more during 1939. One of the latter—at Lucknow—is run by the Motilal Memorial Society to which a grant-in-aid of Rs. 200 per month is given for expenditure on the centre. The work done in the welfare centres in the United Provinces is much along the same lines as that done in Bombay but the former have dispensaries with qualified honorary doctors and full time compounders and dressers attached to them, A trained midwite has been appointed carrying on hygiene and sanitation propaganda among working classes and her services are placed free of charge in delivery cases whenever required.

As far as education is concerned, the railways are again pioneers in the facilities provided both for the education of their illiterate staffs and for the children of different classes of railway employees. The N. W. Railway has started three experimental schools for adult workers in the locomotive sheds at Lahore, Sibsur and Kotri. The experiment is confined to locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway has provided nearly 40 schools for the employees of the operative department. The B.B. & C.I. Railway have six schools for imparting instruction in the three R's and as an inducement to study a bonus of Rs. 5 is paid to each man pass-ing a simple test. With regard to the children of railway employees, in addition to about 100 schools for European and Anglo-Indian children, all the railway systems in India main-tain a total of nearly 160 schools for Indian children at a cost of over two lakhs of rupees per annum. These schools are attended by over 20,000 children. The Bailway Board also gives grants amounting to about Rs. 50,000 per annum to aided schools for Indian children. These are attended by 10,000 children of Indian railway employees.

In Bombay, the Municipality has introduced compulsory education in the F and G Wards of the City which are chiefly peopled by mill-hands. The Social Service League maintains several night schools and a Textile Technical Institute at and the restants will be run on treasury, and the principles and a Textuse Textuse at rates better quality of foodstuffs than is available Parel for imparting practical and theoretical octaids. There will be an athese (indoor training to actual mill workers. The Bombay gynasium) attached to each centre. In addition Y.M.C.A. also conducts several night schools.

COST OF LIVING AND STANDARD OF LIFE.

COST OF LIVING.

cost of living. A monthly cost of living mack A full note on the method used for the complete for working classes in Bombay City compiled by the Bombay Labour Office on the aggregate 779 to 785 of the issue of the Labour Gasste consumption method with July 1914 as the base was regularly published in the Labour 24 items divided into four main groups (I. STANDARD OF LIFE.

ducted by what is known as the 'extensive method ' form the most satisfactory basis of determining the standard of life of any particular class or community. A higher standard of life means better opportunities to satiate wants and desires other than the primary human needs. A larger percentage expenditure on clothing, housing and miscellaneous items such as education, recreation, etc., is therefore a sure indication of an improved standard of living. The Bombay Labour Office has carried out two family budget enquiries for working classes in Bombay City, one in 1921-22 and the other in 1932-33 and the results were published in the years 1923 and 1935 respectively. As has already been mentioned, similar enquiries have also been conducted in Ahmedabed and Sholapur cities and the results at different centres in India:—

The results of family budget enquiries con-of both these enquiries were published in the cted by what is known as the 'extensive' year 1928. In Burma, the Labour Statistics ethod' form the most satisfactory basis of Bureau, Rangoon, published in the same year the results of an extensive enquiry conducted by the Bureau into the standard and cost of living of four different classes of industrial workers in Rangoon, A number of family budgets have also been collected at Cawnpore in the United Provinces and at Nagpur and Jubbulpore in the Central Provinces with the object of compiling cost of living indexes. The effort in the case of the former Province proved futile and that Province is not therefore

Percentage Distribution of Expenditure.

Groups.	Bombay (1932-33).	Ahmedabac (1933-35).	Sholapur (1925).	Nagpur (1927).	Jubbul- pore (1927).	Rangoon (1928).	Madras (1938).

Total	100.00	100.00	100.00	100.00	100.00	100.0	100.00

NOTE.—The figures are not strictly comparable due to differences in the items included in the different groups. But they nevertheless serve to show the variations in the distribution of expenditure in a general way.

The standard of life is more often than not conditioned by the size of the family	and its income.
The following figures are of interest in this connection:—	

	Bombay.	Ahmeda- bad.	Sholapur.	Nagpur.	Jubbul- pore.	Rangoon (Burmese).	
Average size of the family (in persons)		4.05	4.57	4.33	3.76	3.01	6.03
Average monthly income	FA 1 7		Rs. a. p.		Rs. a. p.	Rs. a. p.	Rs. a. p. 37 5 11

It will be seen that the 'miscellaneous' group of expenditure accounts for a comparatively large percentage of the expenditure of the average working class family. In this group is included such items as interest on loans and instalments of debts repaid. Delays in the receipt of earned wages lead to indebtedness of the worker in many cases. The Royal Commission on Labour have made certain important recommendations with a view to lessening the burden of indebtedness of the worker and also to prevent its accumulation. The Payment of Wages Act, 1936 to which reference has been made in an earlier section, is a measure intended to secure to the workmen prompter payments of earned wages so that they may not be put to the necessity of incurring or accumulating debts. The Government of India have under consideration certain other pieces of legislation which are also designed to improve the lot of the industrial worker. Following the recommen-dations of the Labour Commission, the Government of India have amended the Civil Procedure Code with a view to exempting salaries below a defined limit from attachment. Another recommendation of the Labour Commission is that at least so far as industrial industrial workers in receipt of

less than amounting to Rs. 100 Det month are concerned, arrest and imprisonment for debt should be abolished except when the debtor has been proved to be both able and debtor has been proved to be both about unwilling to pay. The Government of India after consulting the provincial Governments have decided to undertake legislation on the recommendation on an experimental scale restricted to the province of Delhi in the first instance. A third recommendation of the Whitley Commission was made with a view to protect workers from harassment for debts. After consulting public opinion and the views of the various local Governments on this question, the Government of India came to the conclusion that central legislation on the subject was not called for. The Government of Bengal, at the suggestion of the Government of India, passed a Workmen's Protection Actin 1984 which makes besetting of industrial establishments for the purpose of collecting debts a criminal and cognizable offence. Some other provinces are also contemplating similar legislation. The Bombay Moneylenders' Bill introduced by a non-official member in the Bombay Legislative Council in March 1934 was an effort in this direction. But unfortunately, the motion for the reference of wages or salary the Bill to a Select Committee was lost.

WAGE RATES AND EARNINGS.

The only reliable and satisfactory data in the Provincial Governments in India contain connection with wage rates and earnings of remarks about prevalent wage rates but these industrial workers in India are these contained in the reports of enquiries conducted by the Labour Office of the Government of Bombay for the Province of Bombay. The Government of India made an attempt to institute a general wage census in India in 1921 but the necessity for retrenchment at the time led to the abandonment of the project and to-day little or no definite information regarding rates of wages is available for any province outside the Province of Bombay. Such information as there is relates to agricultural labour and is contained in a series of reports of quinquennial censuses conducted in certain provinces into agricultural wages and in the reports of Courts of Inquiry appointed under the Indian Trade Disputes Act or in the reports of Provincial Committees appointed by certain Local Governments to enquire into wages and tactory administration reports published by always an exceedingly difficult matter and more

relate only to certain units and they can by no means be considered as being the dominant rates at any one time for any particular industry or area. The annual Mines' administration reports also contain figures for daily earnings for certain main occupations in representative mines in the provinces in which mines are situated but these are also open to the same objection. The lack of accurate and reliable statistics of wages in India has been adversely commented upon and regretted by almost every commission and committee appointed in the country since the beginning of the century and notably by the Royal Commission on Indian Labour whose work was considerably hampered as a result of the paucity of satisfactory information on the subject.

The blame for the lack of information about wages in India cannot lie entirely at the doors of the Central and Provincial Governments. conditions of employment of workers in the of the Central and Provincial Governments, cotton textile industry. Some of the annual The collection of satisfactory wage statistics is

particularly so in India where conditions vary Railway and Commercial offices in Bombay City so markedly and widely not only between in 1925, of printing press workers in Bombay industry and industry and centre and centre clother of workers employed in the building but also between unit and unit in the same trade in Bombay City in 1935, and of all emindustry in the same centre. In the section on hours of work and conditions of employment. some indications have been given of the wide variations in the periods and methods of wage payment. To quote an example: one textile mill in Ahmedabad has five different wage the workers in each group—(1) persons employed in the mechanical, subordinate supervisory and maintenance departments on both daily and monthly rates of wages are paid for periods and monthly rates of wages are paid for periods of one calendar month; (2) weavers on piece rates are paid bi-weekly or for periods of 14 days; (3) dally monthly or hapta rated workers on the spinning side are paid for haptas or periods of 16 days and these haptas vary for different batches of workers; (4) women reclers and winders on piece rates are paid bi-monthly, i.e., for two periods in a calendar month, one from the1st to the 15th and the second from the 16th to the end of the month; and (5) coal and basket carrying cooly labour on daily or weekly rates is paid weekly. The situation is further complicated by the fact that the nomenclature adopted for designating occupations also varies widely between district and district and concern and concern in the same district owing to the use of a host of vernacular and arbitrary terms and of nicknames. Even in concerns which use standard English occupational terms, the position is rendered more difficult owing to the existence of arbitrary gradings of different occupations into several sub-grades and classes. The necessary preliminaries to the conduct of any satisfactory enquiry into wages in India, therefore, must be (1) the establishment of a uniformity of method, (2) the standardisation of occupational terms, and (3) the thorough education and instruction of the clerical staffs of the units to be covered in the proper use of the standardised designations and in the accurate filling up of the required returns. The existence of wide variations in rates and conditions, moreover, makes it advisable to cover as many as possible if not all the units in the industry under survey in order that results which are not biassed one way or the other may be secured. In view of what has been stated it is obvious that no Government in India can undertake a comprehensive enquiry into industrial wages unless it has at its disposal an adequate and thoroughly trained and experienced staff for the purpose. The only Provincial Govern-ment in India which has such a staff is the Government of Bombay.

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted five enquiries in the years 1921, 1923,

ployees in the retail trade in various important towns in the Province in the same year. In 1934 the Labour Office conducted a general wage census covering all workers in all working perennial factories in the Province including cotton mill operatives. The second part of this census covering seasonal factories was conducted periods for different groups of workers with census covering seasonal factories was conducted variations in methods of wage calculation for in the winter of 1935-36. Except for the results of the enquiry into wages in cotton textile Mills conducted in 1937 expressly for the Bombay Textile Labour Inquiry Committee, the results of all the other enquiries have been published either in special reports or in articles in the Labour Gazette.

WAGE RATES

Certain important facts govern all discussions on wage rates in India. Firstly, there is as yet no Government machinery for the fixation of minimum wages; and, in the absence of strong trade unions covering entire or sections of whole industries, there are no trade agreements or union rates except in the cotton textile industry in Ahmedabad which have been accepted both by employers and employees. There are also few awards by conciliation boards. The bargaining power of the workers is moreover weak; and the cumulative result of all these various factors is that employers are almost entirely at liberty to fix any rates they like. Secondly, except for a limited measure of standardisation of time rates of wages for unrationalised occupations in the cotton textile industry in Bombay City and for weavers, siders and doffers in cotton mills in Ahmedabad, there is little or no standardisation of rates in any industry in the country; and, consequently, wage rates not only vary widely be-tween centre and centre and unit and unit in the same centre but also between different individuals in the same occupation in one unit. This varia-tion in rates is further complicated by the fact that the rates are often subject to various additions in the form of dearness allowances and/or good attendance and efficiency bonuses and cuts. Thirdly, to deductions for percentage cuts. Thirdly, frequent changes are made in the basic units of time for which rates are fixed; s.g., rates which are monthly or daily may be changed into daily or hourly rates. Fourthly, almost all the principal occupations in Government and railway concerns and in the industrial esrailway concerns and in the industrial extablishments of public and local bodies are divided into several grades and sub-grades. The basis of the grading in all cases is arbitrary and varies widely between the different administrations. Fifthly, vacancies are seldom if ever filled on the same rates as those paid to the workers who have left. In such cases advantage is usually taken to lower rates ducted five enquiries in the years 1921, 1923, and the wages offered to new entrants depend flows, 1933 and 1937 into the wages of cotton flow on their personal shifty and degree of textile mill workers in the Province of Bombay: ompetence and also on the rates prevalent in an enquiry into agricultural wages covering a other similar concerns and the supply of the type period of twenty-three years from 1900 to 1922; of labour required. The factors of personal an enquiry into the wages of poons in Government and commercial offices in 1922; enquiries power are the most important considerations into the wages of all municipal employees in a wage fixation. The first varies widely bette Province in 1924, of clerical employees in tween individual and individual among Indian workers and whereas a minority in all occupa-tions may be thoroughly efficient, the same can-not be said of the majority. The second depends upon densities of industrial populations in particular locations. Lastly, rates vary widely between town and modusal in the case of the sami-skilled and unskilled operations. widely between town and mofussil in the case of the semi-skilled and unskilled operations, if the semi-skilled and unskilled operations in the semi-skilled and unskilled operations in which it is to the more skilled occupations in which the reality competent men are able to command the reality competent men are able to command their due anywhere. In view of these several pations in all sections of Indian industry:—

Occupations.	Most usual		Rates in

MOVEMENTS OF WAGE RATES.

The only satisfactory criterion on which to base any broad conclusions regarding move-ments of wage rates in any industry in any industrial area or centre in India would be to take the total wages bills for equal numbers of workpeople in the same or similar occupation groups at any two dates and to ascertain the percentage increase or decrease between the two sets of figures. Attempts made by the Bombay Labour Office to do this during its enquiries in connection with the General Wage Census were largely frustrated owing to the existence of irreconcliable variations of principle and considerable diversity in practice not only as between unit and unit but also in the same unit as for example in the cotton textile mill in Ahmedabad which had been deait with above. The comparisons which employers most need ounparisons which employers most need to-day are those with 1914, or, in other words, with the pre-war year. All the pay and muster rolls for that year were, however, destroyed iong ago but most units in the textile industry in Bombay have their 'basic' time and piece the form that the state of the stat rates from which they calculate the earnings on which the percentage dearness of food allowances are computed.

References have often been made in this note to the dearness allowances of 80 per cent. for weavers and of 70 per cent, for all other operatives granted in the textile milis in Bombay City until the middle of 1933 when the Bombay Millowners' Association permitted its individual affiliated members to take independent action in the matter of reducing these allowances. The stages by which these allowances came to be granted were as follows: January 1918—15 per granted were as innows: saturary 1940—19 per cent.; January 1919—raised to 35 per cent.; February 1920—raised to 75 per cent. for weavers and to 55 per cent. for all other operatives; November 1920—raised to 80 and 70 per cent. respectively. These allowances were on the "basic" rates of 1914 or of some other year between 1914 and 1917—rates which were not only not standard for all mills in Bombay City but which actually varied widely as between mill and mill. For example, the results of the 1926 enquiry conducted by the Bombay Labour Office showed that in the 19 mills selected for the enquiry in Bombay City the average earnings (from basic rates plus allowances) of two loom weavers varied between Rs. 1-9-1 and Rs. 2-1-6 per day, of siders between Re. 0-14-3 and Rs. 1-2-11 per day, of warpers between Rs. 1-10-3 and Rs. 2-14-0 per day and for women grey winders between annas 8-3 and annas 15-5 per day. between annas 8-3 and annas 15-5 per day. Notwithstanding these wide variations it is, however, possible to state that wage levels in any particular textile mill in Bombay City were, on the whole, about 70 per cent. higher than the pre-war year at the beginning of the year 1935. During the latter half of 1935 and in the beginning of 1934 all mills in Bombay 15 center of the period of 1934 all mills in Bombay 15 center of the dearness of the period of the perio effected considerable cuts in the dearness allowances and in some cases also in the basic rates. If a later year be taken for purposes of comparison, say 1926, when the Bombay Labour comparison, say 1920, when the nominary Labour regard to wage fracts may be of great value for Office made a thorough survey of prevalent purposes of wage fraction, statistics of earnings rates, the results of the General Wage Census alone are of value for the proper assessment and which was conducted for cotton mills in Bombay appreciation of the well-being of the masses, City for October 1934 showed that wages in the provided however that the term "earnings" Bombay mills, for all occupations, as compared has one uniform meaning in its computation

with July 1926 were lower by 16 per cent. in October 1934. If the twelve most numerically important "process" occupations which cover approximately 70 per cent, of the total number of workpeople employed in the industry are taken and if the figures for these are compared with the figures for the same occupations in 1926, the reduction in wages in October 1934 amounted to 23.79 per cent, and in July 1937 to 25.40 per cent.

In Ahmedabad the war or dearness allowances paid in textile mills in that centre varied widely for different occupations and a general com-parison with the pre-war year is therefore not possible; but, as compared with 1926, wages in May 1934 were 4.4 per cent. higher. This however, was neutralised by the cut of 6‡ per cent. which was brought into effect from 1st January 1935. Again, if the most numerically important occupations alone are considered wages in cotton mills in Ahmedabad were 5.20 per cent. higher in May 1934 than in May 1926. In July 1937 wages were 8.40 per cent. lower.

In Sholapur, the increases in wages granted by individual mills between 1916 and 1919 were consolidated with the rates prevailing in 1914. At the beginning of 1920, the Sholapur millowners gave their first separate dearness allowance in the form of wages in kind-certain quantitles of grain—to all those workers who did not remain absent for more than four days in a month. Workers who falled to put in the required attendance were deprived of this benefit and the agitation of both these and the other workers for higher rates led to the Shoiapur millowners conceding dearness allowances in cash of 35 per cent, over the rates of 1919 to weavers and of 30 per cent, to all other operatives. The value of the grain allowance varied with fluctuation in prices. The existence of several conflicting factors in the wages position in Sholapur prevents the estimate of an accurate comparison with 1914; but, as compared with 1926, wages in July 1934 were 20.5 per cent, lower. Taking the twelve most numerically imlower. Is any the twelve most numerically important occupations, wages in Cotton textile mills in Sholapur were 14 percent, lower in July 1934 and 13.38 per cent, lower in July 1937 as compared with July 1926.

The all-round effect of the Interim Recommendations of the Bombay Textile Labour Inquiry Committee which were accepted by all cotton mills in the Province of Bombay was that the total wages bill in the industry was increased by about 12½ per cent, or by nearly a crore of rupees per annum. Similar increases were granted in cotton mills in the Central Provinces and Berar, in Cawnpore and in Colmbatore.

Owing to the lack of the necessary data for the purpose, similar comparisons for other industries and for other provinces are not possible.

EARNINGS.

Whilst full and accurate information with regard to wage rates may be of great value for and application. In practice, the connotation of the term varies widely for it is commonly special do one of three different values: (1) gross earnings; (2) net earnings; or (3) the amount which a workman receives in his pay envelope. In correct statistical parlance it is none of these three. Let us explain. "Gross earnings" for any particular pay period are the total dues of a wage earner from his basic rates—time or piece—plus all the allowances, bonuses and perquisites-or the value of such where they are not in cash—to which he may be entitled by virtue of his contract of employment and includes wages given for any periods of leave with pay which may be granted during such pay period. The allowances may either be in the form of dearness allowances in cash or grain allowances or overtime absence as shown by the figures for average work. Bonuses may be for good attendance percentage attendance for the group. Average and/or for efficiency. Perquisites may be in the percentage attendance is the percentage ratio of form of free housing, travelling allowances, free the total number of days actually worked by all medical attendance, free railway passes, etc. the individuals in a group to the possible working "Not earnings" are gross earnings less deductions for fines. "The amount in the pay period for the group, the pay envelope" is not carnings less any further deductions. The first individuals in a group to the possible working days in the pay period for the group.

1. **Comparison** The comparison of the possible working the possib tions which may be made by an employer for for the purposes of the General Wage Census; averages of daily carnings for all male and women and, subject to minor modifications, for its other operatives for the whole of the Province of enquiries into wages. It is of the utmost importance that in the conduct of every enquiry excluding the Textile, the Engineering and the into wages, all the persons who are entrusted Printing Industries. The figures in brackets with the work of filling up the required returns in the first, the third, the fifth, the sixth and should have a clear and thorough conception the seventh tables show the numbers of as to what should or should not be included in workers covered by the averages to which they relate.

Two sets of figures may be compiled for "earnings": (1) average daily earnings ascertained by dividing the total earnings for a group of workers in any occupation by the total of the number of days actually worked by all the individuals in the group; and (2) average monthly earnings ascertained by dividing the total earnings of the group for a period of one month by the number of persons in the group. In cases where statistics have been collected for wage periods of less than a month, monthly averages can be reckoned by ascertaining the weighted average of the number of days worked by all the units concerned in the month in which the shorter period is contained and by multiplying the figure for average dally earnings by the weighted average less the figure for average

all perennial factories in the Province of Bombay tions which may be much by an employer for an permit actories in the Province of Bombay house rent, medical attendance, subscriptions; covered mearly a thousand occupations in to provident funds, income-tax, refunds of nearly twenty industries. For the purposes advances, payments for purchases from coof the census the Province of Bombay was divided operative stores or cheap grain or cloth shops, into ten territorial areas and the reports contain repayments of loans from provident fund the averages of daily and monthly earnings for accounts or from convertible are distributed. accounts or from co-operative credit societies, all monthly paid workers in all the occupations absorptions to sports clubs or institutes, etc. loncerned in each of these ten areas. It is abboriptions to sports clubs or institutes, etc. loncerned in each of these ten areas. It is The amount in the pay envelope can never be obviously not possible for us to reproduce reckoned as earnings because every worker is the figures here but for purposes of general expected to pay for his income-tax, house rent literest we give below (1) the averages of and purchases and to liquidate his other liabilimonthly earnings for six of the most important and purchases and to liquidate his other liabil-| monthly carnings for six of the most important titles and debts from his income. In all cases occupations which are to be found in all factives and so not be reckoned as income because these shops; (2) the general averages for men in all may be habitually liable to deductions for fines.

Net earnings' would most correctly approxi-| factories; (3) the average monthly earnings mate to earnings for statistical purposes. In six of the most important printing occupas. Sufficient has been stated to show how difficult the computation of "earnings" can be operatives in all printing presses which are fac-different views as to its correct computation to trois for the purpose of the Indian Fac-different views as to its correct computation to trois for the purpose of the Indian Fac-different views as to its correct computation. and that is the reason why the term 'cardings' laverage daily earnings in the more numerically is so widely interpreted. The most frequent and general usage of the term for statistical industry for 1934 with the increases recommended purposes is to take gross earnings in cash less by the Bombay Textile Labour Inquiry Confines and without valuating such perquisites mittee in their Interim Report which was as free housing, free medical attendance and free published in February 1938 and which were railway masses in the case of railway workers. railway passes in the case of railway workers, accepted by all Cotton Textile Mills in the and to include travelling allowances where these Province; (6) the average daily earnings in the are paid for conveyance between place of work same occupations in July 1937 in cotton textile are paid for conveyance between place of work same occupations in July 1937 in cotton textile and home but not when they are paid for trans-, mills in Hombay, Ahmedabad and Sholapur as port to some other temporary sphere of work, published in the Committee's Interim Report This is the basis on which figures for "carnings" with the recommended increases again added to were collected by the Bombay Labour Office the published figures; and (7) the general for the purposes of the General Wage Census; averages of daily earnings for all male and women

The Labour Office report gives figures for average daily earnings separately for men and
women and for time rated and piece priced workers. The figures contained in the above table are
the weighted averages for both male and female workers whether paid on time or piece. Children
are excluded.

[†] The figures according to the results of the general Wage Census have been increased according to the rates of increase specified for different categories of earnings in the Schedule given at page 92 of the Bombay Textile Labour Inquiry Committee's Interim Report and which has been reproduced at page 532 of this section.

i "Frame Tenters" include Drawing, Slubbing, Inter and Boving Tenters.

VI. Average Daily Earnings in the numerically most important occupations in Cotton Textile Mills in Bombay, Ahmedubad and Sholapur according to the special enquiry conducted by the Bombay Labour office in July 1987 for the Textile Labour Inquiry Committee with the increases recommended by the Committee added to the figures in the same way as in the above table.

Centr	es,*		Frame Tenters.	Siders.	Doffers.	Reelers.	Winders.	Two Loom Weavers.	
Bombay		٠.	Rs. a. p. 1 2 4 (5.464)	Rs. a. p. 1 1 10 (9,240)	Rs. a. p. 0 12 2 (8,040)	Rs. a. p. 0 10 5 (5.901)	Rs. a. p. 0 12 7 (14.623)	Rs. a. p. 1 7 8 (21,463)	
Ahmedabad	• •	• •	1 2 11 (3.526)	1 3 10 (7.193)	0 12 5 (5,781)	0 10 3 (1.436)	0 10 9 (6,329)	1 10 8 (22,077)	
Sholapur	• •	• •	0 11 11 (811)	0 10 3 (1,735)	0 8 5 (1,344)	0 4 11 (1,290)	0 6 6 (2,460)	1 8 1 (2,644)	

[•] The figures for earnings in the above table were taken from the Interim Report of the Textile Labour Enquiry Committee. The figures for July 1937 for the other textile areas in the Province of Bombay were not published when we went to Press.

The differences in the two sets of figures in Tables Nos. V and VI show that there was a distinct fall in earnings all round between 1034 and 1037. This was particularly so in Ahmedabad where, according to the Delhi Agreement of 1035 a cut of 6‡ per cent. was effected all round.

The Reports of the Central Provinces and Berar Textile Labour Inquiry Committee and The Colmbatore Court of Inquiry which were published during the year 1938 give the figures of average earnings in individual mills in various centres but no general figures for the centres as a whole. For further detailed information regarding wages in these areas the reader must refer to the reports indicated as it is not possible to reproduce figures for individual units in this note.

Provincial factory administration reports show that the monthly earnings of cotton wowevers and spinners in some other provinces are as follows: Bengal Rs. 25 and Rs. 14; Punjab Rs. 28 and Rs. 20; and Madras Rs. 27 and Rs. 20. In the Jute mill industry, single shift hossian weavers earn Rs. 31 per month and the average for both warp and weft spinners is Rs. 17-4-0 per month. The earnings of women workers in jute mills vary between Rs. 11 per month for most occupations and Rs. 15 per month for twisters.

WORKMEN'S COMPENSATION.

Under the ordinary common law an injured accident arising out of and in the course of employ-workman is entitled to recover damages or ment and where the accident is not directly compensation for an injury sustained by him attributable to misconduct, breaches of rules in the course of his employment if the injury or orders or disregard of safety devices. Beis proved to have been caused by the personal negligence of his employer. In addition, the Indian Fatal Accidents Act of 1855 permitted the award of damages to the dependants of a Indian Fatal Accidents Act of 1855 permitted and phosphorus poisoning were deemed and the award of damages to the dependants of a treated for the purposes of compensation, deceased workman if the accident resulting in a injuries caused by accident; provided his death was due to the wrongful act, neglect however, that the worker concerned was in or fault of the person responsible for the accident. The procedure in connection with the recovery of damages under both the common law and the Fatal Accidents Act was, however, extremely cumbersome. This together with the ignorance and the illiteracy of Indian workers and their financial disability in undertaking extensive illitigation had placed them in a very disadvanta-geous position in suits for compensation. homologues or the sequelae of such poisoning, Moreover, with the growing industrialisation (2) chrome ulceration or its sequelae, and (3) of the country, accidents were annually becoming more numerous than before and, in their results were responsible for considerable hardship on the workers and their families. Disabilities similar to these had been removed in most of the industrialised countries of the world by the passing of workmen's compensation laws providing for easy and speedy relief to workmen injured as a result of industrial accidents and to their dependents in cases where the accidents resulted in death. The necessity for such legis-lation in India was obvious and the Government of India drew up proposals for a Work-men's Compensation Act which they circulated to all local Governments in 1921. The pro-posals met with a fair measure of approval and the Government of India drew up a Bill which they introduced in the Legislative Assembly in September 1922. After its reference to a Select Committee, the Bill was passed in March 1923 and the Indian Workmen's Compensation Act was brought into operation with effect from the 1st July 1924. This was the first plege of legislation in the field of social insurance in India.

WORKMEN'S COMPENSATION ACT, 1923.

In its main principles, the Indian Act follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1928 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of vested interests to the original measure. The original limita-tions of scope were to a large extent removed

sides bodily injuries the contracting of certain occupational diseases such as anthrax and lead the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925. This list was further expanded in 1933 by the compressed air illness (Caisson Disease) or its sequelae.

The Royal Commission on Indian Labour made a long series of recommendations for the improvement of the Act; firstly, to extend its scope so as to cover all types and classes of workers who were likely to be most affected by the increased risks of modern industry; secondly, to enhance the scales of compensation payable and to facilitate the methods for their payment; and, thirdly, to effect various changes designed to improve the administration of the measure. It is not necessary for the purposes of this note to trace the evolution of the legislation in connection with workmen's compensation in India since the passing of the first Act in 1923 and it will be more useful if we gave the main provisions of the Act as it stands to-day.

Classes of Workmen Covered by the Act .-Classes of Workmen Covered by the Act.— These have been specified in the definition of the term "workman" contained in section 2(1) (n) and in Schedule II. In all cases persons employed in an administrative or cierical capacity and those whose monthly earnings exceed Rs. 300 are excluded. Speaking broadly, the Act covers railways; factories; mines; seamen; docks; persons employed in the con-struction, repair or demolition of buildings designed to be or which are of more than one storey or of twenty feet in height; or of dams and embankments, roads, bridges or tunnels; or wharves, quays, sea walls or other marine work; the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables; aerial ropeways, canal pipe lines or sewers; the fire brigade; railway mail service; operations for winning natural petroleum or natural gas; blasting operations and excavations. blasting operations and excavations : ferry tions of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 boat services; cinchons, coffee, rubber or and 1933 and the Act as it stands to-day covers to the plantations; electricity or gas generating over seven million industrial workers in the country. Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in case4 where there has been no negligence and injured workmen or the dependants of a contract with a railway are also covered. As those killed can obtain compensation in all cases for the contractors of the compensation of the contractors of the c registered in foreign countries are included. Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered. The Governor-General in Council is empowered to bring within the scope of the Act other classes of workmen whose occupations are considered to be of a hazardous nature.

Amounts of Compensation Payable .- The amount of compensation payable depends on the average monthly wages of an injured or deceased workman The term 'wages' includes deceased workman overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to Schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes. The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and the 60; the corresponding figures are its. 1,800, Rs. 2,520 and Es. 10; the respectively. The maxima for persons earning over Rs. 200 per month are Rs. 4,000, Rs. 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement. No compensation is payable in respect of a waiting period' of seven days following that on which the injury was caused.

(NOTE: Permanent total disablement means such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent, loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Who are Dependants.-These are defined in two are Dependent.—Inset are defined in two categories: firstly, those who are in practi-cally all cases actually dependents; and secondly those who may or may not be in that position. The first includes a wife, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a husband, a parent other than a widowed mother, a minor llegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

General.-The interests of dependants in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer since 1st July 1924 on which date the original

admits liability the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependants get the information neces-sary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as does not exceed the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration.—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Local Governments, Provinces of Bengal and Madras have one Commissioner each for the whole province. The Province of Bombay has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction,

Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead-(1) the doctrine of common employment, by which the employer is not normally liable to pay damages to a workman for an injury resulting from the default of another workman; (2) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation. The Royal Commission on labour regarded both these doctrines as inequitable and recommended by a majority that a measure should be enacted abrogating these defences. Provincial governments were consulted in 1982 and were almost unanimously in favour of legislation for the purpose. In the mean time judicial decisions in British India while generally agreeing as to the inequitability of the doctrines have been such as to leave it open to employers in most Provinces to have recourse to them. The Government of India introduced a Bill in the Central Legislative Assembly on the 15th August 1938 to declare that these defences shall not be raised in suits for damages in British India in respect of injuries sustained by workmen.

STATISTICS OF WORKMEN'S COMPENSATION

The statistics regarding cases disposed of under the Act have been collected and published

Act came into force. These statistics show over 138 lakhs of rupees in 248,402 cases. that in the period of thirteen and a half years following table shows the number of cases, from July 1924 to December 1937 the total classified by nature of injuries and the amounts amount of compensation paid amounted to of compensation paid in each year since 1924:—

The figures for 1924 relate only to the six months from 1st July to 31st December.

EFFECT ON INDUSTRY.

A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (Vide para 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was faced. In the Punjab, the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the pri-vileges enjoyed by the miners under the Act as some of them had to pay as compensation on a

a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance but there can be no denying the fact that the introduction of workmen's compensation has helped considerably to improve the standard of safety in the country. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay, single accident more than they could earn during insurance companies were concerned with half

the number of cases that came up before the commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

The report for the year 1937 states that, as in the previous years, a few trade unions were reported to have assisted their members to obtain compensation. In the Province of Bombay, the Textile Labour Association, Ahmedabad, was the only trade union to take any effective share in the settlement of claims for compensation 2: behalf of the workers. This Union handled 244 cases during 1937 and compensation amounting to Rs. 21,915 was secured. In Bengal the activity of individual trade unions was more marked in 1937 as compared with 1936.

TRADE UNIONISM AND TRADE UNION LAW.

The earliest known trade unions in India were (1) The Bombay Millhands' Association, a loose organisation formed in 1890 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act; (2) The Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions; (3) a Printers' Union started in Calcutta in 1906; and (4) The Bombay Postal Union which was formed in 1907. The Kamgar Hitwardhak Sabha, Bombay, which came into existence in 1910, was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in India till almost after the end of the Great War. Trade organisations were, however, not unknown and trade or craft guilds had a definite place in the social economy of the village communities. Each trade or craft was the monopoly of a particular caste, and the organisation that existed for each occupational caste WAS 8.8 ' guild '. The two main known R. functions of these guilds were (1) to regulate the relations between the members inter se; and (2) to deal with questions affecting the relations of the caste as a whole vis-a-ris the community. The panchayats, as the executives of these guilds were called, enforced their decisions on their members by means of social sanctions, and their demands on the community by means of hartals, i.e., withholding of service. These guilds differed from modern trade unions in that they did not consist of wage earners, were not open to members outside the particular castes concerned, and that they had no written rules or regulations. Their background was more social than industrial and they were a type of 'close trade unions.' Contact with the West and the gradual industrialtestion of the country, however, introduced cleavages in the solidarity of the village communities and consequently into the homogeneity of the old craft guilds which began to disintegrate and disappear only to emerge later in a form more suited to modern industrialism.

The decade following the end of the World War witnessed rapid developments in the field of trade unionism in India, but it must be regret-

fully admitted that organised association of the workers in the country is far below the stage of development which it has reached in Great Britain and in many of the other industrialised countries of the world. The reason for this can be put in a nutshell; lack of a will to organise as far as the workers are concerned mainly In fear of victimisation and organised opposition to association by workmen from their employers. Such success as the movement has met with is due largely to a series of entirely fortuitous circumstances. The origin of the post-war movement is clearly traceable to the distant lag in wages behind prices and the con-sequential heavy fall in real wages. Large masses of ignorant and lillterate industrial workers were compelled, through sheer inability to make ends meet, to strike work. After they had struck work they were unable to formulate their demands and to offer organised resistance without outside assistance. Here is where the outsider who had no knowledge of industry got his chance to step into the movement and to become a labour leader. Some of these labour leaders were men who had the good and welfare of labour genuinely at heart. But many went into the movement merely for the opportunities which it would give them for coming into the limelight. Whereas the former went about affairs with a measure of considered moderation, the latter were mere tub thumpers who liked hearing their own voices and who strung together all kinds of impossible and preposterous demands in the hope that by doing so they would trans-port Indian industrial labour at once into an Arcadia. Both these types of leaders together with some of the more intelligent of the workers constituted themselves into strike committees. These committees when they were first formed secured a considerable measure of success in so far as concessions in wage rates were concerned ; but, whereas many of these self-appointed committees fell into a state of inantion on the conclusion of a dispute; a good few of them, emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginning of the trade union movement in India, and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country. As there are no official records to show the names of and the memberships claimed by these earlier bodies, nothing definite can be stated with regard either to their number or to their total membership; but it

can be safely asserted that the movement had made a fair penetration on the railways, in postal and telegraph departments, among seamen and ln the textile industry in Ahmedabad City, and in some other centres. If an estimate may be attempted, it would perhaps not be incorrect to say that at the beginning of the year 1024 there were about 150 unions in India with a total membership of about half a million workers.

The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the annual sessions of the International Labour Conference. Thus, the All-Indla Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. These bodies received a very generous measure of recognition both from the Railway Board and the Director-General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Rallway Board and the Rallwaymen's Federation and at these conferences all the more important questions con-nected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

Although there are a few unions of jute mills workers in Bengal and four or five unions of textile workers in Bombay City, the trade unlon movement has not made any appreciable progress in the two chief centres of these two important industries in India. The main reason for this is that the leaders at the head of these unions hold widely diverging views and cannot compose their differences sufficiently enough to enable them to meet on a common platform. Another important reason, in the purely personal opinion of the compiler of this note, is the existence, in these industries, of the all-powerful jobber whose interests in the labour which he brings to his mill would be severely undermined if the workers began to feel that they were independent of him in the matter of the removal and redress of their minor grlevances. It is true that the Bombay Girni Kamgar Union -a communist organisation formed at the commencement of the general strike of six months in the cotton mill industry in Bombay City in 1928—claimed a membership of over 50,000 at the end of that year, but this union lost its membership almost entirely after the disastrous general strike which it conducted in 1929. The latter strike killed the movement in the cotton mill industry in Bombay and although such of the existing unions as were left have been making frantic efforts to regain their hold on textile labour, they have entirely falled to

figures of membership. A third reason is organised opposition to trade unionism by employers and the victimisation of workmen who take the lead in trade union activities.

In an earlier section it was stated that had . employers in Indian industry had the sagacity and the foresight towards the end and im-mediately after the close of the Great War to have taken the trouble to adjust wage rates to the increases in the levels of prices and so to balance real wages, the history of industrial strife in India round about and during the third decade of the present century might have been entirely different. To a limited measure, the history of the trade union movement in India too might have been somewhat different. Trade unionism was bound to come. The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical international conferences had iaid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unlons in the country. This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to be to combat trade unionism. Every possible move to frustrate combination by their workmen was adopted and where departmental orders against taking interest in trade union activities were disobeyed the workmen concerned were either dismissed or, in cases where the larger organisations had other branches, were transferred to one or the Victimisation of the other of such branches. trade unionist, except in the city of Ahmedabad where a strong union had been formed in the spinning section of the cotton textile industry in that centre under the leadership of Mr. M. K. Gandhi whom the Ahmedabad millowners could not possibly displease on political grounds, was rampant. The trade union movement, therefore, instead of getting its most important support from within the ranks of labour itself, was thrown by Indian employers into the waiting hands of the outside agitator; and, unfortunately for Indian trade unionsim, no body of outsiders versed in proper trade union methods and principles was available. Such outsiders as could collect some of the hot-heads among the workers in particular units or industries, formed unions in those units or industries; but again with the exception of Ahmedabad and also of certain sections of railways which were manned by a more intelligent and literate type of persons, these unions were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

1929. The latter strike killed the movement in the cotton mill industry in Bombay and although concerned, trade unions were faced with a three-such of the existing unions as were left have been making frantic efforts to regain their hold on taxtile isbour, they have entirely falled to do so and the present unions are carrying on a potter, the majority of the employers refused do so and the present unions are carrying on a power purely nominal existence with very small posed of outsiders; and on the third, an amend-

ment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law. We have already dealt with the first two of these three questions. As far as the third is concerned, the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for bona fide union activities and it was at once apparent that some legislation for the protection of trade unions was necessary. In March 1921, the Legislative Assembly of the Government of India, on the motion of Mr. N. M. Joshi, then General Secretary of the All-India Trade Union Congress, passed a resolution recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition to such a measure from associations of employers was, however, so great that it was five years before the necessary legislation could be placed on the Statute Book. Indian Trade Unions Act was passed in March 1926 and was brought into operation with effect from 1st June 1927

THE INDIAN TRADE UNIONS ACT, 1926.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers; and persons under the age of 15 are debarred from membership of any registered union.

Registration .- Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6; and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent, of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased to exist or has wilfully and after notice contravened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register | Unions for such unions.

it or by the cancellation of its registration may prefer an appeal to a judge appointed by the local Government for the purpose; and, it the event of the dismissal of such an appeal, the aggreed party has the right of a further appeal to the High Court.

Obligations | Imposed on Registered Trads Unions. -The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but, the Act makes provision for the creation of a separate political fund, subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence. Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union.

Rights and Privileges of Registered Trade Unions.—The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases. As this immunity is not enjoyed by unregistered trade unions, Mr. N. M. Joshi introduced a private Billin the Legislative Assembly in 1927 to amend the Indian Penal Code with the object of proteeting such unions from the law of criminal conspiracy. The Bill was circulated to the various Provincial Governments in India for opinion but was stoutly opposed, mainly on the ground that it would discourage registration. The Government of India concurred with this view and as a result of Government opposition to it, the Bill was defeated on the 8th September 1928 on a motion for its reference to a Select Committee.

The Government of India issued a notification under the adaptation of India Laws Orders in Council in 1938 directing that unions whose objects are not confined to one Province and whose membership covers persons in two of more Provinces, as in the case of Railway Unions, should register with the Registrar appointed for such Trade Unions, under adapted Section 3. The additional District Magistrate of Delhi has been appointed Registrar of Trade Unions for such unions.

The administration of the Act is entirely on a disproportionate in comparison with the rights ovincial basis and each local Government is and privileges which registration conferred. The provincial basis and each local Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in transferred to another province, the registration has to be transferred to that province. All provincial Governments are empowered to make from the railways and the Bombay Millowners' rules for the manner in which the annual audit Association who, on the breaking out of the of registered unions should be carried out, for general strike in the Bombay cotton mills in prescribing the forms and the manner in which unions may apply for registration and in which registered unions should forward the required notices, etc., to the Registrar, and for the free payable for registration and inspection of the register and other documents pertaining to any registered union. Unlike the various other pieces of labour legislation in India which have been subjected to frequent revision, there has been no amendment of the Indian Trade Unions Act, except for a slight modification which was made in 1928 in Section 11 regarding appeals in order to clarify the provisions of that section. and the present law on the subject continues to remain the same as it was when the Act was first passed in 1926.

EXTENT OF REGISTRATIONS UNDER THE ACT.

Trade unions were at first slow to seek registration under the Act. There had been no prosecutions under the 1913 amendment of the Indian Penal Code for criminal conspiracy in Indian Penal Code for criminal conspiracy in in Ahmedabad a basic constituency for the the case of strikes conducted by unions since the return from that centre of labour representatives Buckingham Mill case of 1920 and with the enjoyment of this immunity in practice, most of the existing unions thought that registration involved obligations re. maintenance of proper ing table shows the numbers of registered unions books and accounts, audit and the submission of on all the provincial registers in British India notices and statements of annual accounts and at the end of each financial year together with the restrictions re, the framing of rules in accounts in membership and income of those which furnishwith the requirements of the Act and on expendent the figure exclude cancellations. diture which could be incurred which were too of registration.

impetus to registration however came from the employers who in many cases insisted on regiswhich its head office is situated and if this is tration prior to recognition-in many cases even registration did not secure recognition-, and the first organised move in this direction came April 1928, refused to enter into any negotiations except with the representatives of registered unions. The Bombay Textile Labour Union which had been formed in 1926 by Messrs, N. M. Joshi and R. B. Bakhale was among the first to seek registration under the new Act : but three other unions of cotton mill workers in Bombay City had not registered and these at once applied for registration as soon as the Bombay Millowners made registration a condition of recognition. After this, several unions all over India sought registration under the Act, but in many cases registrations were short-lived because they had to be cancelled owing to failure to submit annual returns or for non-compliance with the other requirements of the Act. It is of interest to observe that the Ahmedabad Textile Labour Union which is the biggest and best organised trade union in India refrained, on purely political grounds, from registering until the end of 1935 and it only did so then owing to the probable decision of the Delimitation Committee to make registered textile unions to the Bombay Legislative Assembly which would come into being as the result of the new Government of India Act of 1935. The follow-

Registered Trade Unions in Reitich India

•	Year,				Number of registered	Unic	Unions furnishing returns.				
	i		trade unions.	Number.	Membership.	Income.					
1927-28					29	28	100,619	Rs. (In lakhs)			
1928-29					75	65	181,077	3.17			
1929-30	٠.			•• }	104	90	242,855	4.33			
1930-31	٠.			•• ,	119	106	219,115	4.07			
1931-32	٠.		••	•• ;	131	121	235,693	4.78			
1932-33					170	147	237,369	5.57			
1833-34				}	191	160	208,071	5.03			
1984-35	٠.			•••	213	183	284,918	5.29			
1935-36				!	241	205	268,326	5.29			
1936-37				•••	296	228	261,074	4.88			

The percentage of female membership in the above figures is very small indeed. In 1927-28 it was 1,166, in 1932-33 it was 5,090 and in 1936-37 only 9,025 or 3.5 per cent of the total membership in that year. Out of the 296 registered unions on the 31st March 1937, 85 unions were in Bengal, 49 in the Province of Bombay, 46 in the Province of Madras and 86 in the Punjab. No other province had more than eighteen. Orissa had only one with a membership of 18. The figures given in the above table for membership and income are theoretical because they include persons who have not paid their subscriptions and income which has not been recovered. If the membership of 261,047 in the 228 unions which furnished returns for the year ending 31st March 1937 is analysed it is found that 120,157 were employed on railways and that 24,655 were seamen. The membership in 29 registered unions of textile workers was only 28,971. The Province of

Bombay is the only province in India which regularly collects information and statistics in connection with all trade unions. The following table shows the progress of the trade union movement in that province:—

Growth of Trade Unions in the Bombay Presidency (excluding Sind).

Ye	ar.	Membership.		
1923 .		1 17 1	38,963	
1926 .		54	69,544	
1929 .		92	1,93,738	
1930 .		86	125.313	
1932 .		89	107,189	
1935 .		108	1,06,201	
1936 .		99	88,119	
1937 .		114	1,03,421	
1938 .		153	1,41,592	

If the figures contained in the above table for the year 1938 (1st December) are analysed by industries, the results are as set out below :-

Distribution of Membership of Bombay Unions.

		Cl	ass of	Indus	try.			Number of unions.	Membership.	Percentage to total membership
Textile	•	-	• •	••	• •	• •		22	54,858	88.74
Seamen								2	20,092	14.19
Railways	٠.		٠.					B	27,787	19.59
Posts and	Tel	egra	pha		٠.]	32	6,569	4.64
M unicipal			٠.			••		7	5,114	3.61
Miscellane	юце			٠.				81	27,222	19.23
						Total	[153	141,592	100.00

Of the 22 unions of textile workers with a membership of 58,858, five 'vertical' unions of cotton mill workers in Ahmedabad which are under the control of the Ahmedabad Textile Labour Union claim a membership of 23,495. Of the remaining unions, five with a total membership of 17,915 are in Bombay City.

THE PROGRESS OF THE TRADE UNION MOVEMENT IN INDIA.

In the absence of any reliable statistics and information on the growth and activities of trade unions in India outside the Province of Bombay it has not been possible to deal with the development of the movement from an all-India point of view. The Labour Office of the Government of Bombay has collected full information re all trade unions in the Province of Bombay once in every three months since the middle of 1922 and this information has been incorported in Quarterly Reviews in the Labour Gazette published monthly by that office, but similar infor-mation is not available for the other provinces in India. Every province, however, compiles an annual administration report on the working of the Indian Trade Unions Act, 1926, and the Government of India publishes a general report

provincial reports. These reports are unfortunately confined only to questions in connection with the administration of the Act-numbers of registrations and cancellations of registration membership of registered unions and consolidated statements of their accounts-and they contain little, if any, information about the activities of the unions themselves.

We have so far dealt with the development of the trade union movement in India until the coming into operation of the Trade Unions Act. Up-to-date statistics based on such figures as now proceed to conclude this review with a rapid survey of the main events in the movement since 1927. The height of the movement was reached in 1928-29 when communists sat on the top of the world of Indian labour. Communist leaders had captured almost every important union in India except the taxtile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in a memberanip of over so, over season more about the Bombay Girai Kampar Union. The memberahip figures of the various other unions which they controlled also showed remarkable increases. Their make object in getting into the trade union movement however, was to use it as a tool for the based on the information contained in the furtherance of their revolutionary principles and

doctrines for the overthrow of the existing Government and the uprooting of capitalism. The success which they had met with as the result of the general cotton textile strike of 1928 in Bombay was, as subsequent events have proved, purely adventitious. The doctrines they had preached to the masses during that and the oil strike of the winter of that year were responsible for rioting in Bombay City on a scale previously unknown. Thirty-one of the ring-leaders of the movement were arrested early in 1929 on charges of organised conspiracy and were taken to Meerut for trial. This has been dealt with in an earlier section. Such of the communists as remained unarrested engineered the general cotton textile strike in Bombay of the year 1929. This lasted for more than three months and was called off only after the publication of the report of a Court of Enquiry appointed by Government and which allocated the whole of the blame for this unwarranted strike to the Bombay Girni Kamgar Union. The publication of this report and the effects of the 1929 strike dealt a blow to the trade union movement from which it has not yet recovered. The workers were left thoroughly distilusioned and they lost all faith in the bona fides even of genuine trade unionism.

The communists not content with the mischlef they had wrought in the ranks of individual trade unions made a successful attempt in 1920 either to capture or to break the Ali-India Trade other to capture or to break the All-India Trade Union Congress. They affiliated the Bombay Girni Kamgar Union with a membership of 54,000 and the G.I.P. Railway Workers' Union with a membership of 41,000 to that body dur-ing the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at the tenth session of the Congress which was held in Nagpur in that year. Resolutions were adopted favouring the affiliation of the Congress to international communist organications and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Bound Table Conferences on Indian Reforms. Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seconded from the Congress and formed a new organisation called the Indian Trades Union Federation. The Ali-India Railwaymen's Federation which was till then affiliated to the Trade Union Congress left that body in 1929 and remained outside till 1935.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs. S. V. Deshpande and B. T. Randive broke away to form the All-India Red Trade Union Congress. By this time, however, trade unionism in India was at a thoroughly low ebb and none of the three national organisations could by any manner or means make a claim to speak on behalf of Indian labour; but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trader Union Federation as the body competent to recommend delegates for the International Labour Conference.

With a view to bring about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This Committee found that three different and distinct sections of labour were in existence in India-(1) the communist group; (2) the liberal group; and (3) the rest—and that the gulf which divided the communists from the other sections was not bridgeable. The Committee, therefore, recom-mended a platform of unity for the remaining sections of labour in India. It was proposed to organise and unite all unions which accepted this 'platform of unity' under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federa. tion of Labour held at Calcutta in April 1933, the two federations were amaigamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new amaigamation was named the National Trades Union Federation. In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in India. In the month of February of the same year an agreement was reached between the representatives of the All-India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues. At the end of the year 1937, the National Trades Union Federation had a membership of 83,000 with 62 affiliated unions and the All-India Trade Union Congress had a membership of 46,000 with 98 affiliated unions, It is interesting, however, to note that the labour unions of Ahmedabad which draw their inspiration from Mr. Gandhi have throughout remained aloof from both these bodies.

At a special joint session of the All-India Trade Union Congress and the National Trade Inion Federation held at Nagpur on the 17th April 1938, it was decided to combine these two bodies into one central organisation. The principal terms of the agreement approved by the executives of both these hodies are that the hasis of representation on the joint General Council of the new combined Trade Union Congress be fifty-fifty—44 members from each group—and that the Trade Union Congress accept the constitution of the National Trade Union Federation is toto. The following were appointed office hearrs of the Trade Union Congress for a period of one year: Dr. S. C. Banerji (Federation) President; Mr. Aftab All (Federation), Mr. Jamnadas Mehta (Federation) and Mr. Mukundial Sircar (T.U.C.) Vice-President; Mr. R. B. Bakhale (Federation) Secretary; Mr. R. S. Nimbkar (T.U.C.) Treasurer;

Mr. B. K. Mukerji (T.U.C.) and Mr. S. V. Parule-kar (Federation). Assistant Secretaries. The official flag of the Trade Union Congress will be the red flag with the legend of the Trade Union Congress thereon but without the hammer and sickle. The combined Trade Union Congress now has a total membership of about 180,000 with 160 affiliated unions. One of the terms of the agreement reached at Nagpur was that if the combined body worked satisfactorily for a year the federation should be finally dissolved. As we go to Press we understand that a movement has been started to secure this dissolution and to make the All-India Trade Union Congress again the one central body for labour in India.

Important developments in the field of Indian Trade Unionism during the last two years included the formations of the Bombay Provincial Trade Union Congress and the Madras Provincial Union Congress: the organisation of unions of workers of textile mills in Native States by the Ahmedabad Textile Labour Association and by the Cawnpore Mazdur Sabha; and the amalgamation of the right and left wings of the C. I. P. Railway workers'

unions.

ENFRANCHISEMENT OF LABOUR LINDER THE NEW CONSTITUTION.

The question of representation of labour in the central and provincial legislatures has in recent years assumed considerable importance owing to the growing interest taken by the general public in labour matters. Under the constitution established by the Government of India Act, 1919, both the Governor-General and the Provincial Governors had powers to make a certain number of nominations to the Central Legislative Assembly and to the Provincial Legislative Councils. The majority of such nominations were to be from the ranks of Government officials but both the Governor-General and the Provincial Governors were permitted to exercise their option in nominating persons from other outside interests in order to remedy inequalities of representation. In pursuance of this power one nominated seat in the Legislative this power one nominated seat in the Legislative Assembly and one nominated seat in the Legislative Councils of Bengal and Bombay were reserved for representatives of labour. The Governors of Punjab, the Central Provinces, Bihar and Orissa and Assam followed suit and nominated one member each for labour interests in their respective Councils. A little later, the labour representation in Bengal was increased to two and in Bombay to three seats.

The question of the enfranchisement of labour under the new constitution received considerable attention from every Commission and Committee appointed in connection with the reforms—(1) the Provincial Franchise Committees set up by the various Provincial Governments in India in 1931; (2) the Franchise Submonitiee of the Indian Round Table Conference; (3) the Indian Franchise Committee (4) the Provincial Delimitation Committees set up by local Governments in India: and (5) the Indian Delimitation Committee set up in 1935 under the chairmanship of Sir Lawrie Hammond, Several alternative schemes of representation were considered. The Royal Commission on

Indian Labour were of opinion that the method which was likely to be most effective in securing the best representation of labour was that of election by registered trade unions. The Indian Franchise Committee were, however, unable to accept trade unions as the sole basis of representation and they recommended representation through constituencies composed of registered trade unions and also through special labour constituencies composed of workers in factories employing a minimum of ten persons in selected areas and centres. On the basis of a combination of these two methods, the Committee recom-mended 38 seats for labour in the Provincial Legislatures-eight each for Bombay and Bengal, six for Madras, four each for Bihar and Orissa and Assam, three each for the United Provinces and the Punjab and two for the Central Provinces. With regard to the representation of labour in the Federal Assembly, the Indian Franchise Committee recommended that labour should get the same extent of representation as commerce, viz., eight seats. Election should as far as possible be through registered trade unions except in the case of provinces such as Bengal and Assam where trade unions in the two chief industries of jute and ten are either too weak or non-existent. In such cases the method of representation should be considered at the time of the delimitation of constituencies. These various proposals were accepted by the Third Round Table Conference and by the Joint Select Committee of Parliament on Indian Constitutional Reforms with the exception of a slight reshuffling of seats consequent on the decision for the separation of Sind and Orissa. These two new provinces were to get one seat each at the expense of Bombay and Bihar and Orissa and the number of seats in the Federal Assembly was increased from eight to ten of which one was to be a non-provincial seat and the remaining nine to be distributed among the provinces, Bombay and Bengal getting two each and one sent each going to Madras, Bihar, the United Provinces, the Central Provinces and Assam.

The Indian Delimitation Committee, whose report was published in February 1936, laid down the following requirements which a trade union should fulfil before it can be included in the electorate:—

- It should have been in existence for two years and have been registered for one year before the date fixed for the preparation of the electoral roll;
- (2) Its membership should not have fallen below 250 during the year preceding the preparation of the electoral roll;
- (3) It must have complied with any rules made under the Indian Trade Unions Act for the inspection of books by the Registrar and for professional audit; and
- (4) Its fulfilment of the preceding conditions should have been attested by a tribunal to be appointed by the Governor.

The Committee further recommended that the Indian Trade Unions Act should be so amended as to invest local Governments with the power of inspecting the registers of registered trade unions and to make Government or professional audit of their accounts compulsory. As regards

unions of textile workers in the Madras District got one seat each and the four remaining seats

encies of (1) textile workers in Coimbatore and

unions got one seat and the two remaining seats

were allocated to industrial factory labour in Cawnpore and industrial labour in Lucknow,

and the allocation of the four seats in Assam

the qualifications of an elector in a labour constituency, the Committee recommended that (1) he must have attained the age of 21 of the Burdwan District and one seat for tea years; (2) he has had a place of residence in garden labour in the Japaigurt and the Darjeethe province for six months immediately preceding Districts. In the Bombay Presidency, ing a date to be fixed by the local Government: Ahmedabad textile unions and railway unions (3) in the case of a trade union constituency, he in Bombay got two seats each, the Bombay belongs to a registered trade union included in textile unions and unions of seamen and dock the constituency and has paid up his subscription for the twelve months preceding the date of Sholapur City got one seat on the basis of a the preparation of the electoral roll; (4) in the special labour constituency. Of the six seats in case of a special Lbour constituency he has been Madras, all railway unions in the presidency and in continuous employment in a factory or a mine for a period of not less than 180 days in the year preceding the date of preparation of were divided between special labour constituthe electoral roll; and (5) he is not employed in a clerical, supervisory, recruiting or administra- Malabar, (2) Madras City dock and factory labour tive capacity. The qualifications laid down by (excluding railways and textiles), (3) Vizaga-The qualifications laid down by (excluding railways and textiles), (3) Visaga-for a candidate are that he should patam dock and factory labour, and (4) West the age of 26 years, satisfied the down in the Fifth Schedule to In the United Provinces all registered trade tive capacity. the Committee for a candidate are that he should have attained the age of 25 years, satisfied the conditions laid down in the Fifth Schedule to the Government of India Act and that he should be an elector either in the constituency for which he stands or in any other labour constituency in the province concerned. As far as the method of Agra, Aligarh and Allahabad. In the Punjab, election is concerned, the Indian Franchise the North Western Railway Union got one seat Committee were of opinion that where a trade and the two remaining seats were allocated to union constituency is confined to a single area industrial labour in special labour constituencies voting might be direct but where it covers two composed of certain districts of East and North or more different centres election should be Punjab. In Bihar, registered mining unions in through an electoral college composed of dele- Dhanbad were allotted one seat and three went through an electoral college composed of deels Dhanbad were shotted one seat and three went gates elected in each union in the proportion of to special labour constituencies for (1) Janished-one for each group of 100 workers. The Indian pur factory labour, (2) Monghyr and Janished-one for each group of the west power, strongly factory labour, and (3) Hazaribag mining labour. In favour of direct election, whether in trade in the Central Provinces, trade unions in Nagpur union or in special labour constituencies, unless city got one seat and the remaining seat was there were quite decisive practical difficulties allotted to a special labour constituency of in-in the way but they favoured the principle of dustrial labour employed in certain areas in the electoral colleges in the case of certain unions rest of the province. The one seat in Orlssa is of railway workers.

As far as the actual constituencies for the are to vary at successive elections between tea Provincial Legislative Assemblies are concerned gardens in different districts. As far as repre-the Indian Delimitation Committee recom-sentation in the Federal Assembly is concerned, mended that out of the eight seats given to labour the proposals vary between the allocation of the in Bengal, two seats should be with trade union two seats for the Bombay Presidency between all

constituencies for registered unions of railway registered unions in Bombay and Ahmedabad, and water transport workers and six for special to the Governor of the Province acting at his labour constituencies as follows: Registered own discretion at each successive election in factories in Calcutta and suburbs, Howrah, Assam. IN INDIA.

The proposals of the Indian Delimitation Committee with regard to the formation of certain constituencies for the return of representatives of labour to the Federal Assembly and to the Provincial Legislative Assemblies on the basis of registered trade unions are bound to have some effect both on the formation of new unions and of the registration of such of those as have not yet registered under the Indian Trade Unions It is also probable that registered unions will make better endeavours than they have hitherto done in maintaining proper books of accounts and registers of members in view of their compulsory examination by officials of Government for the purposes of preparing electoral rolls. At the same time, however, the electoral rolls. At the same time, however, the imposition of these further restrictions on the conduct of the affairs of registered trade unions possible that in the absence of such leadership will not part with money for a purely proble

THE FUTURE OF TRADE UNIONISM | many unions will tend to disintegrate and disappear. As far as the workmen in Indian industries are concerned, trade unionism has not taken on anywhere near to the extent which it has with workmen in the West; and, as has already been stated above, the fear of victimisation is too strongly entrenched in the minds of the workers to enable them to enter into combinations promoted to safeguard their interests. Things might have been different had the labour franchise been limited en-tirely to registered trade unions but in most provinces outside the Province of Bombay the majority of the constituencies are special labour constituencies with which trade unions are in no way concerned. It is also very doubtful whether an Indian industrial worker will part with a monthly quots of his already meagre income for union subscriptions merely for the right of a vote. The experience of the last fifteen years shows that most of the unions which became defunct went to the wall owing mainly might very well tend to dissuade several interest to the fact that their officials were not able ed outsiders from continuing at the helm of affairs of their respective unions; and it is quite members for the reason that the indian workman

matic advantage. He wants a return for his in India, there are few, if any, unions which are outlay in the form of an increase in his wages run on the model of the Ahmedabad Textile and if he does not get this within a reasonable Labour Union. The vast majority of those period he pays no union subscriptions. The Ahmedabad Textile Labour Union is, happily, in a somewhat different position because in addition to its having an excellent conciliation and arbitration machinery for the redress of minor grievances and the discussion of major issues, it provides a host of welfare schemes in the form of hospitals and dispensaries, educa-tion and facilities for recreation, co-operative stores and cheap grain shops, etc., and its members get more than value for their money. In addition, the union is under the control of extremely disinterested, able and zealous officials like Mr. Gulzarilai Nanda, Parliamentary Secretary for Labour to The Honourable The Prime Minister, Mr. Khaudubhai K. Desai and Mr. S. P. Dave, who have made the union their The office of the union with its

which have been kept alive through the zeal of interested outsiders are hollow structures with no funds and bolstered figures of membershipbolstered in order to convince the employers concerned re. their bona fides for recognition. No trade union movement can stand on foundations such as these. It is possible, however, that with the spread of education and literacy, Indian industries will attract a more educated type of workman who will be able to persuade his fellows of the advantages of organised combination and that a healthier movement built on more solid foundations will take the place of the hollow structure which exists to-day. Whilst there are no indications for optimism there is. at the same time, no cause for pessimism in the matter but the hopes of all persons interested in the welfare of the labour movement hundred or more clerks is a beehive of industry. In India are, as far as trade unionism is con-Unfortunately for the trade union movement cerned, in the laps of the gods.

INDUSTRIAL DISPUTES AND TRADE DISPUTES LEGISLATION.

India" in which we have given a complete offence of inciting others to take part in an illegal survey of the growth of the labour problem in strike. The Chief Presidency Magistrate held this country from its first beginnings in the that the strike was not illegal and acquitted seventies of the last century up to the present the accused. The Government of Bombay day we have dealt at some length with all the more important industrial disputes, and we have also given the findings and the recommendations of the various committees and departmental enquiries instituted in connection with them. We have also given statistics of industrial disputes in India during certain periods of intense industrial strife and we have traced the growth industrial strife and we have traced the growth provide for the appointment of Conciliation of conciliation and arbitration machinery culofficers and to amend the Act in a few other minor particulars. The main provisions of the Bombay, of the Bombay Trade Disputes ConAct as it now stands are as follows: ciliation Act of 1934 and the Bombay Industrial Disputes Act of 1938 which will replace the 1934 Act from 1st August 1939. In view of this, there is very little left to be said in this particular section and our remarks will therefore be confined to a brief description of the Indian Trade Disputes Act, 1929 and to the all-India statistics of industrial disputes during the last seventeen

THE TRADE DISPUTES ACT, 1929.

The Trades Disputes Act was first passed in 1929. Its life was limited to five years but as a result of the recommendation made by the Royal Commission on Indian Labour in the matter an amending Act was passed in 1934 by virtue of which it was placed permanently on the Statute Book. In an earlier section of this note we referred to the prosecution launched by the Government of Bombay under Sections 16 and 17 of the Trade Disputes Act against eight leaders of the Textile Strike of 1934 on the grounds (1) that some of the demands made or formulated by the strikers were not in furtherance

In the first part of this note on "Labour in action. The accused were charged with the passed a further Amending Act in March 1938 passed a little of which the words "general and prolonged" were omitted from clause (b) of sub-section (1) of section 16 of the Act, Advantage was taken at the same time to

> With the exception of sections 1 and 2 which deal with short title, extent, duration, etc., and interpretations, and section 19 which deals with rule-making powers, the main body of the Trade Disputes Act, 1929, falls into three parts. The first provides for the appointment of Courts of Enquiry and Boards of Conciliation (sections 8 to 14); the second contains special provisions with regard to strikes in public utility services (section 15); and the third deals with illegal strikes and lockouts (sections 16 to 18). The first part of the Act relating to the establishment of tribunals for the investigation and settlement of trade disputes was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference is that whereas the British Act sets up a standing and permanent Industrial Court, the Conciliation Boards which the Indian Act makes provision for are intended to be appointed ad hoe like the Courts of Enquiry, in order to deal with particular disputes.
>
> The Governor-General in Council, in the case

of a trade dispute; and (2) that the strike of a fall ways or concerns under the control of the was designed to inflict severe, general and Government of India; and the local Governpuolonged hardship on the community and thereby to compel the Government to take of concerns, have power to refer any matters or abstain from taking some particular course of appearing to be connected with or relevant to

any trade dispute which exists or is apprehended hardship upon the community and thereby between an employer and his workmen to a to compel Government to take or abstain from Court of Inquiry for report; or to refer the whole taking any particular line of action. Persons dispute to a Board of Conciliation for promoting furthering illegal strikes or lockouts are liable a settlement thereof. Where no reference is to punishment while those refusing to take part made by either party or where a reference is in them are protected from trade union dismade to Government by only one party, the abilities to which they might otherwise be appointment or otherwise of a Court or a Board subjected. is entirely at the discretion of Government; but where both the parties to a dispute apply either conjointly or separately for the reference of the dispute to a Court or a Board it is obligatory on Government to proceed to appoint a Court or a Board, as the case may be, provided that Government are satisfied that the persons apply-ing represent the majority of each party. The objects of Courts of Inquiry which may be composed of an independent chairman and other independent persons or only one independent person would be to investigate and report on such questions connected with the dispute as might be referred to them. The settlement of the dispute would depend on the force of public opinion on the Court's findings. The objects of Boards of Conciliation which may consist of one independent person or one independent chairman and two or four other members comprised of equal numbers of persons representing the interests of both the parties to a dispute and to be nominated by the parties concerned would be to secure a settlement of the Provisions are contained in the Act to enable both Courts and Boards to enforce the attendance of witnesses and the production of documents. Neither party is under any obligation to accept the findings of a Court or the advice of a Board; but in practice both parties would be expected to do so.

The second part of the Act which covers public utility services makes it a penal offence for persons employed in such services to go on strike without giving fourteen days' notice in so. Penalties are also provided for persons abetting such an offence. This provision is based on the principle that persons whose work is vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time has been given to examine the merits of their grievances and to explore the possibilities of arriving at a settlement. Provisions of a somewhat similar type are also to be found in the Indian Post Offices Act and in a number of Municipal Acts in India; and the principle is one which has been widely accepted in other countries. Among "public utility services" have been included railways, postal, telegraph or telephone services; undertakings supplying light or water to the public, and any system of public conservancy or sanitation.

Clauses 16 to 18 of the Act relating to illegal strikes and lockouts closely follow the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927, but there provisions are only applicable in the case of those strikes and lockouts which satisfy both of two conditions: in the first place, the strike or lock-out must have objects other than the mere furtherance of a trade dispute within the industry to which the strikers or employers belong; and, in the second place, the strike or lockout by these must be designed or calculated to inflict severe man-days.

During the period of nearly nine years between the passing of the Act in 1929 and the coming into effect of Provincial Autonomy in April 1937, the Industrial Disputes Act was made use of only on five occasions. Since August 1937, however, Congress Ministries, particularly in Madras, have been making an extensive use of the Act. Outside the Province of Bombay, almost every dispute of major importance is referred to a Court of Inquiry or a Board of Conciliation. In Madras, one Board of Con-ciliation and five Courts of Inquiry were appointed between August 1937 and September 1938. Similar action has been taken in Bengal, Bihar, the United Provinces and Assam in the last of which a Court of Inquiry was appointed on the 16th August 1938 to enquire into the conditions of work of the employees of the Assam Oil Company Ltd., at Digboi. The Government of Bombay, however, have only used the Act on one occasion-in 1929, immediately after it was passed—when it appointed the Pearson Court of Inquiry to enquire into the causes of the General Strike in Cotton Textile Mills in Bombay of that year,

As has already been stated at the beginning of this section, events leading up to the passing of the Bombay Trade Disputes Conciliation Act in 1934 and the appointment of the Commissioner of Labour in the Bombay Presidency as the exofficio Chief Conciliator have already been dealt with in the general survey. The scope of that Act has also been surveyed and statistics as to writing to the employer of their intention to do its working up to the end of 1938 have been given. Reference has also been made elsewhere to the excellent private conciliation and arbitration machinery which exists in the textile industry in Ahmedabad for the examination and settlement of all industrial disputes. It will be seen, therefore, that as in almost all the advanced industrial countries of the world, conciliation in India too has come to be regarded as a matter of first rate importance in the settlement of industrial disputes. The appointment of Labour Officers by the Millowners' Association, Bombay, and by the Government of Bombay have been followed by the creation of similar posts in Bengal, the United Provinces, Madras and in Bihar and it is expected that all Provinces will make similar appointments in the near future.

STATISTICS OF INDUSTRIAL DISPUTES.

Statistics of industrial disputes in India have only been collected since 1921. The following table sets out the number of disputes in each year since 1921, the number of persons affected by these disputes and the total time lost in Industrial Disputes in India, 1921-36.

Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.	Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.

THE INTERNATIONAL LABOUR CONFERENCE.

Reference has already been made in the preliminary sections of this note to the creation, by the Treaty of Versailles, of an International Labour Organisation and to the work of the International Labour Conference. Since the holding of the first session of the Conference in Washington in 1919, twenty-three further sessions have been held till the end of the year 1938 and a total of sixty-three Conventions have been adopted. We give below, in serial order, the year and the place at which each of the twenty-four sessions of the Conference were held, the composition of the delegation from India, and the titles of the different Conventions which were adopted at each session. In the notes on the composition each session. In the notes on the composition of the delegation Government Delegates are represented by the capital letter "G", Employers' Delegates by the letter "E" and Workers' Delegates by the letter "W". The names of the technical advisers to the Government, Employers' and Workers' Delegates have transported to the composition of been omitted in all cases. Symbols (full meanings and explanations of which are given at the end of this section) are placed beside the titles of the Conventions with regard to which action has already been taken by the Government of India. In all cases where no symbols appear. alongside the titles, no action has been taken.

1st Session (Washington, 1919): Indian Delegation.—Government.—Sir Atul Chatterjee and Sir Louis Kershaw; Employers.—Sir Alexander Murray; Workers.—Mr. N. M. Joshi.

Conventions.

- 1. Hours of Work (Industry)-(AB)
- 2. Unemployment—(AC)
- 3. Childbirth.
- 4. Night Work (Women)-(AB)
- 5. Minimum Age (Industry)-(D).
- Night Work (Young Persons)—(AB) White Phosphorus—(D).

2nd Session (Geneva, 1920); G—Sir Louis Kershaw and Capt. D. F. Vines; Seamen's Delegate—Mr. A. M. Mazarello.

Conventions.

- 7. Minimum Age (Sea)—(E).
- 8. Unemployment Indemnity (Shipwreck)

9. Placing of Seamen.

3rd Session (Geneva, 1921): G—Sir Atul Chatterjee and Mr. I. N. Gupta; E—Sir Nowroji Saklatvala; W—Mr. N. M. Joshi; Secretary— Mr. A. G. Clow,

Conventions.

- 10. Minimum Age (Agriculture).
- 11. Right of Association (Agriculture)—(AC).
- 12. Workmen's Compensation (Agriculture).
- 13. White Lead (Painting).
- 14. Weekly Rest (Industry)-(AB).
- 15. Minimum Age (Trimmers and Stokers)—
- 16. Medical Examination of Young Persons (Sea)—(AB).
- 4th Session (Geneva, 1922): G—Sir Bhupendra Basu and Sir Louis Kershaw; E—Sir Alfred Pickford; W—Mr. N. M. Joshi; Secretary—Mr. C. H. Sliver.
- 5th Session (Geneva, 1923): G—Sir Dadiba M. Dalal and Sir Louis Kershaw; E—Sir Joseph Kay; W—Mr. K. C. Roy Chowdhury.
- 6th Session (Geneva, 1924): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Alexander Murray; W—Mr. Joseph Baptista.
- 7th Session (Geneva, 1925): G—Sir Atul Chatterjee and Sir Louis Kershaw: E—Sir Thomas Smith: W—Mr. N. M. Joshi; Secretary —Mr. R. N. Gilchrist.

Conventions.

- 17. Workmen's Compensation (Accidents).
- 18. Workmen's Compensation (Occupational Disease)—(AC).
- 19. Equality of Treatment (Accident Compensation)—(AB).
 - 20. Night Work (Bakeries).
- Sth Session (Geneva, 1926): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom; W—Mr. Lajpat Rai; Secretary —Mr. R. N. Glichrist.

Conventions.

21. Inspection of Emigrants-(AC).

9th Session (Geneva, 1926): G-Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom: W—Mr. M. Daud; Secretary— Mr. R. N. Gilchrist.

Conventions

- 22. Seamen's Articles of Agreement-(AB).
- 23. Repatriation of Seamen.
- 10th Session (Geneva, 1927): G—Sir Atul Chatterjee, Sir Louis Kershaw and Dr. R. P. Paranjpe (Substitute): E—Mr. G. D. Birla, W—Mr. V. V. Giri; Secretary—Mr. S. Lall.

Conventions.

- 24. Sickness Insurance (Industry, etc.).
- 25. Sickness Insurance (Agriculture).
- 11th Session (Geneva, 1920); G—Sir Atul Chatterjea and Dr. R. P. Paranipe and Mr. J. C. Walton (Substitute); E—Mr. Narottam Morarjee; W—Mr. Diwan Chaman Lall; Secretary-Dr. R. C. Rawlley.

Conventions.

- 26. Minimum Wage Fixing Machinery.
- 12th Session (Geneva, 1929): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe, and Mr. A. G. Clow (Substitute); E—Mr. Kasturbhai Lalbhai; W—Mr. N. M. Joshi; Secretary—Mr. A. Dibdin.

Conventions.

- 27. Marking of Weight (Packages Transported by Vessels)-(AB).
 - Protection against Accidents (Dockers).
- 13th Session (Geneva, 1930): G—Sir Atul Chatterjee and Sir Geoffrey Corbett and Mr. C. W. A. Turner (Substitute); E—Mr. Jadunath Roy; W-M: W. A. Turner. W-Mr. M. Daud; Secretary-Mr. C.
- 14th Session (Geneva, 1930): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. A. Latiff (Substitute); E—Mr. A. L. Ojha; W— Mr. S. C. Joshi; Sceretary—Mr. G. Graham Dixon.

Conventions.

- 29. Forced Labour.
- 30. Hours of Work (Commerce and Offices)

 - A = Unconditional ratification
 - B Legislative or other measures passed since the adoption of the Convention.
 - C = Legislative or other measures anterior to the adoption of the Convention by the Conference.
 - D = Legislation passed.

E = Legislation in progress or in preparation.

India has ratified the following Conventions unconditionally; (1) Hours of Work in Indusunconditionally; [1] Hours of work in Indus-tries; (2) Unemployment; (3) Night Work (Women); (4) Right of Association (Agri-culture); (5) Weekly Rest (Industry); (6) Minimum Age (Trimmers and Stokers); (7) Medical Examination of Young Persons (Sea); (8) Workmen's Compensation (Occupational Diseases); (9) Equality of Treatment (Accident Compensation); (10) Inspection of Immigrants; (11) Marking of Weight (Packages transported by vessels); (12) Night Work (Women by vessels); (12) Night Work (Women (Revised)); (13) Underground Work (Women). In addition, legislative or other measures were passed in India with reference to the application passed in India with reference to the application of the following conventions: (1) Hours of Work (Industry); (2) Night Work (Women); (3) Night Work (Young Persons); (4) Weekly Rest (Industry); (5) Minimum Wage (Trimmers and Stokers); (6) Medical Examination of Young Persons (Sea); (7) Equality of Treatment (Accident Compensation); (8) Seamen's Articles of Agreement; (9) Marking of Weight (Packages transported by vessels); (10) Night Work (Women (Revised)).

GOVERNMENT ADMINISTRATION OF LABOUR **OUESTIONS.**

The central co-ordinating authority in India constitutional position is perhaps, to some questions connected with labour in extent, responsible for the opposition shown by for questions connected with most industries is the Department Labour of the Governments of India with a member of the Viceroy's Executive Council holding the portfolio. Questions connected with the labour employed in docks and the mercantile marine are dealt with by the Department of Commerce. All railway workshops and running sheds employing twenty or more persons are factories subject to the Indian Factories Act, the central executive authority for which is the Department of Labour; but, apart from the control which this Department and the but, apart from Provincial Governments exercise over railway workshops and running sheds, all classes of railway labour are under the control of the Railway Board which is itself under the control of the Department of Communications. Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and Inter-Provincial Migration' were central subjects whereas industrial matters included under the recommended that the possibility of making head 'factories' and 'welfare of labour' fell labour legislation both a federal and a provincial within the scope of the provincial legislatures subject should receive adequate consideration; 'Inter-Provincial Migration' were central subjects passed central legislation in connection with most questions affecting the welfare of labour-

some of the local Governments to labour measures on which their views have been invited by the Government of India during recent years. The Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the central legislature in two ways; in the first place he is vested by Statute with the general power of superintendence, direction and control; and, secondly these Acts in most cases reserve certain power to him to make the powers con-ferred on Local Governments subject to his control. The general principle observed by the Government of India, however, has been to grant to the provinces as free a hand as possible in the administration of the various all-India Acts. The central Government in the Depart-ment of Labour however maintains control in connection with the Indian Mines Act.

and although the Government of India has and that, if federal legislation were not practicable, efforts should be directed to securing that, as early as possible, the whole of India should participate in making progress in labour matters. in order to secure uniformity of treatment in all participate in making progress in labour matters, provinces—the administration of the various For Indian States in which there was appreci-Acts connected with factories, workmen's com-able industrial development, the Commission pensation, trade unions, payment of wages, the thought that the Industrial Council which they pledging of child labour, etc., falls on the local recommended should be set up would offer a Governments who have to bear the entire cost suitable channel for co-operation. The whole of administration as it is not permissible under question was discussed threadbare at the various the constitution, for the central Government to Round Table Conferences which were held in incur any expenditure from central revenues on London in connexion with the new reforms: the administration of provincial subjects. This and Mr. N. M. Joshi who represented the

interests of Indian Labour at these conferences than 1939; but in order to cope with the pressed that as far as possible labour legislation increased administrative work in connexion with should be a federal subject. Owing largely to matters relating to Labour, the Government Mr. Joshi's efforts, the Joint Parliamentary Comof Bengal have how appointed a whole-time mittee decided for concurrent legislation. The Government of India Act, 1985, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures:—

- (1) Factories: regulation of the working of mines, but not including mineral development;
- Welfare of labour; provident funds; employers' liability and workmen's compensation ;
- (3) Trade Unions: industrial and labour disputes.

THE CENTRAL GOVERNMENT.

Reference has already been made to the establishment by the Government of India of a special Labour Bureau in 1920 and to the abolition of this office in 1928 in pursuance of recommendation made in the matter by the Indian Retrenchment Committee. The Department of Labour has, however, endeavoured to carry on as much as possible of the work of that Bureau but owing to its limitations in staff and personnel it is not in a position to initiate and conduct all-India enquiries into wages and conditions of employment in Indian industries. The present executive staff of the Department of Labour is as follows :-

Member-in-charge: The Honourable MUHAMMAD ZAFRULLAH KHAN, KT., BA BAR-AT-LAW. (This member also holds the Commerce Portfolio.)

Secretary: The Honourable Mr. M. S. A. HYDARI, C.I.E., 1.C.S.

Deputy Secretary: N. MAHADEVA AYYAR, 1,0.8.

Under Secretaries: C. M. KERR, 1.C.S. and MENON P. MADHAVA, I.C.S.

BENGAL.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws generally were administered in the Commerce Department, but the Revenue Department continued the administration of the Assan Labour Immigration Act. The Labour Immigration Act. The Assam Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency as well as of labour organisations. From time to time as circumstances required it was intended that he should conduct special enquiries but owing to financial stringency, Government could not provide him with adequate staff for the purpose. The Intelligence Officer was also the Deputy Secretary to the Government of Bengal in the Commerce Department and after the coming into effect of the Trade Unions Act, 1926, he was also appointed Registrar of Trade Unions. The Royal Commission on Indian Labour recommended that Bengal should have a pro-perly staffed Labour Office on the same lines and with at least the same staff as the Labour Office of the Government of Bombay; but owing to financial stringency, it was not possible to give effect to this recommendation earlier

Labour Commissioner who will be relieved of all work in the Secretariat. An Assistant Commissioner of Labour has also been appointed. The Labour Commissioner and the Assistant Labour Commissioner have also been appointed as Conciliation Officers under the Indian Trade Disputes (Amendment) Act. Besides promoting the settlement of strikes and lockouts, they will also enquire into and settle other minor disputes. The question of the re-organisation of the Labour Office and the appointment of Labour Officers were still under the consideration of Government when we went to Press.

Government in the Agriculture and Industries Department have appointed an Employment Adviser who is a member of the Indian Civil Service, to investigate the problem of unemployment and to suggest remedial measures. His work, which is not yet complete, is expected to yield results of considerable value. They have also decided to have an enquiry made into the family budgets of the working class in the Province by the Bengal Board of Economic Enquiry.

The Workmen's Compensation Act is administered by the Commissioner for Workmen's Compensation who is also the authority under the Payment of Wages Act, 1936. The Indian Mines and the Trade Disputes Acts and the Bengal Workmen's Protection Act, 1934, are administered by the Commerce Department which since the 1st April 1937 has been renamed the Commerce and Labour Department.

The growth of healthy trade unionism has received much attention and rules to regulate the recognition of bona fide trade unions are being framed. An amendment of the Bengal Trade Union Regulations to empower the Registrar of Trade Unions to excercise greater control over registered trade unions with a view to the prevention of mal-administration of their affairs, so often complained of, is also under consideration. A Bill to regulate employment in shops and another to amend the Bengal Workmen's Protection Act are also being considered by Government.

During 1938, the Government of Bengal appointed two Boards of Conciliation, one each in respect of the strike at the Pottery Works of Messrs. Burn & Co., at Ranigunj and the other in connexion with the strike at the workshops of the Indian Iron and Steel Co., Ltd., at Hirapur and Kulti, district Burdwan.

Labour Commissioner and Registrar of Trade Unions: W. A. S. LEWIS, I.C.S.

Assistant Labour Commissioner: KHAN SAHIB S. A. E. B. MURSHEDI.

Commissioner for Workmen's Compensation Act and Authority under the Payment of Wages Act: S. N. MODAK, I.C.S.

Chief Inspector of Factories : J. B. McBRIDE. A.M.I. (MECH.) E., O.B.E.

Certifying Surgeon: H. C. POWNES.

MADRAS.

The Government of Madras appointed a Labour Commissioner in the year 1920 primarily to organise and control the operations for the betterment of the condition of the Depressed classes in the Madras Presidency, especially in regard to provision of water supply, assignment of lands, acquisition of house sites, education through special schools and grant of assistance in the form of Scholarships and boarding grants. The administration of Criminal Tribes Settlements was also placed under him. He was also to watch and study at all times the conditions of labour, particularly industrial labour, throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The duty of settling labour disputes by negotiation before their culmination in strikes or lockouts or after is now entrusted to him by the Government in an increasing measure. He is consulted by both labour organisations and employers in regard to Trade Union Law, the Fac-tories Act, the Payment of Wages Act, and the Madras Maternity Relief Act. He Chief Inspector of Factories, is appointed Commissioner for Workmen's Compensation and Registrar of Trade Unions, and is also responsible for the administration of the Payment of Wages Act and the Madras Maternity Relief Act. For the administration of the Factories Act he has a Technical Personal Assistant at headquarters who is also in charge of the Madras Factories Circle. The Labour Commissioner in Madras has no special statistical office to deal with Labour statistics and no reports have been published of any special enquiries into questions connected with industrial labour in the Presidency. The conduct of the Quinquennial dency. The conduct of the Quinquennial Census into Agricultural wages has been placed in his hands, and with the introduction of the Payment of Wages Act, a beginning has been made for a more accurate collection of industrial wages statistics for inclusion in the Factories Act Administration Report.

The Labour Office in Madras published a very interesting Report of an Enquiry into the Family Budgets of Industrial Workers in Madras City in 1938 and another Report entitled "Madras Labour—July 1937 to October 1938" in 1939.

Commissioner of Labour: S. V. RAMAMURTY, I.C.S. (This officer is also Commissioner for Workmen's Compensation: Registrar of Trade Unions, Chief Inspector of Factories and the authority under the Payment of Wages Act.

BOMBAY.

Of all the Provincial Governments in India, the Government of Bombay have always maintained a progressive lead in their zealous and earnest solicitude for the welfare and well-being of the industrial labour employed in the province; and the real pioneer work in the field of labour information and statistics in India during the last eighteen years has been done by the BOMBAY LABOUR OFFICE which was established in 1921 by Lord Lloyd, then Governor of Bombay. In the Government resolution an-

nouncing the establishment of this office the following were declared to be its functions:—

- "(1) Labour Statistics and Intelligence.— These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters:
- "(2) Industrial Disputes.—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise; and
- "(3) Legislation and other matters relating to Labour.—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws."

When the Labour Office was first started it was placed in charge of a Director of Labour. The post of the Director of Labour was, however, abolished in 1926 and the Labour Office was placed under the charge of the Director Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to "Commissioner of Labour and Director of Information." With this change in designation the administrative control of the Factory and Botler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Commissioner for Workmen's Compensation and Registrar of Trade Unions. Mr. J. F. Gennings, C.I.E., C.B.E., Barrister-at-Law, held charge of the work of the Labour Office from July 1926 to the 10th May 1939 when he went on leave pre-paratory to retirement. With the departure of Mr. Gennings, the posts of the Commissioner of Labour and Director of Information have been separated and the Information Office has been placed in charge of the Public Relations Officer. Under the Bombay Industrial Disputes Act, 1938, the Commissioner of Labour has also been appointed ex-Officio Chief Concillator. In addition to the Commissioner there are four gazetted officers attached to the Labour Office. Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth who is called the Labour Officer at Ahmedabad is stationed at that centre. There are also three full time lady Investigators but these are not gazetted appointments. The office staff contains three Statistical Superintendents, four senior clerks, thirteen junior clerks: two stenographers, one typist, one cashier, one despatcher and one daftari. The activities of the office comprise (1) prices and cost of living,
(2) wages and hours of labour, (3) rents, (4)
economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the Labour Gazette and (12) library.

The Labour Gazette has been published monthly since September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The Labour Gazette circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India.

In the Labour Gazette statistics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Province of Bombay, for industrial disputes and for workmen's compensation, prosecutions under the Indian Factories Act, and the employment situation. Quarterly information is collected with regard to all known trade unions in the Bombay Presidency and full information is published in the Labour Gazette every three months.

A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodicals received from Labour Ministries, and International and research organisations in various parts of the world.

The present staff of the Department is as follows:—

Minister-in-Charge of Labour: The Hon'ble The Prime Minister Mr. B. G. KHER.

President, Industrial Court: The Hon'ble Mr. JUSTICE H. V. DIVATIA.

Parliamentary Secretary for Labour: GULZA-RILAL NANDA, M.A., LL.B., M.L.A.

Commissioner of Labour, Commissioner of Workmen's Compensation and Registrar of Trade Unions.—D. S. BAKHLE, I.C.S.

Registrar of Unions, Bombay Industrial Disputes Act: N. A. MEHRBAN, M.B.E., F.S.S.

Labour Officer: M.P. LABOUCHARDIERE, I.P.

Assistant Commissioners of Labour.—S. R. Deshpande, M.B.E., B. LITT. (Oxon.), N. A. Mehrban, M. B.E., B.A., F.S.S. and S. V. Joshi, B.A. (Cantab.), Mr. Joshi is also Assistant to the Registrar of Trade Unions, Bombay Presidency.

Chief Inspector of Factories: T. W. JOHN-STONE, O.B.E.

Labour Officer at Ahmedabad.—A. S. Iyengar, B.A.

PUNIAB.

In the Punjab, the Director of Industries ordinarily looks after all necessary matters in connexion with Labour. He is also the Registrar of Trade Unions. The Workmen's Compensation Act is administered by the Senior Subjudges at Lahore, Ferozepur, Amritsar, Lyallpur, Ambala, Multan, Rawalpindi and Sargodha and by the Deputy Commissioners in the other Districts.

Retail prices of articles of food, clothing, fuel and lighting and certain miscellaneous goods entering the family budgets of industrial workers in the Punjab and working class cost of living index numbers are published monthly in the Punjab Government Gazettee. Annual figures are published in the form of a report by the Board of Economic Enquiry. During the year 1938 the Government of Punjab adopted a three year plan for a complete industrial Survey of the Province.

Director of Industries and Registrar of Trade Unions.—RAI BAHADUR LALA RAM LAL, M.B.E.

CENTRAL PROVINCES.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies and Registrar of Trade Unions. The Factory Office is also under his general supervision. As regards the question of administration in connexion with labour and labour legislation, a separate Labour Office has been established under the charge of a Labour Officer who is also an Inspector of Factories in addition. He investigates into labour disputes, collects necessary statistics and works as a Conciliation Officer in case of trade disputes. The C. P. Labour office is, at the moment we go to Press, engaged in conducting the wage census of the cotton textile industry. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board but the Board acts purely in an advisory capacity.

Director of Industries and Registrar of Trade Unions: C. C. DESAI, I.C.S.

Labour Officer: P. K. SEN.

UNITED PROVINCES.

In the United Provinces almost all departments of the local Government dealt with various phases of questions connected with labour up to the end of 1934. Labour as such was with the Home Member, electricity was with the Finance Member, the factory inspection staff was under the control of the Director of Industries, boller inspection was under the control of the Public Works Department. The Registrar of Cooperative Societies was appointed ex-officio Registrar of Trade Unions. In 1935, however a more unifying policy was adopted and the Director of Industries was appointed Director of

Statistics and ex-officio Commissioner of Labour for the general administration of all questions connected with labour. The assumption of office by the Congress in this Province on July 19th 1937 was heralded with serious labour troubles in Cawnpore. The Hon'ble the Prime Minister announced his intention to appoint a special officer to deal with labour disputes as they arose from day to day and to bring forward legislation on the lines of the Bombay Trade Disputes Conciliation Act 1934. Dr. R. B. Gupta, M.A., Ph.D. (Econ.), was appointed Labour Officer in August 1937 to settle industrial disputes and to act as a welfare officer in the broadest sense of the term.

Following the recommendations of the Cawnpore Labour Inquiry Committee, Mr. P. M. Khareghat, C.I.E., I.C.S., Secretary to Government in the Department of Industries, was appointed Labour Commissioner in addition to his own The Labour Commissioner duties. Cawnpore every week, takes up conciliation proceedings and tries to get the parties to settle the disputes referred to him. Since the Employers' Association of Northern India has not yet recognised the Mazdoor Sabha the Modus Operand for settling disputes is this: A complaint is received from the Mazdoor Sabha, it is sent to the Employers' Association, the reply of the latter is then sent to the Mazdoor Sabha. The latter if it is satisfied does not comment and if not, it requests the Labour Commissioner to take up the matter further. A date is then fixed for hearing the parties and conciliation proceedings, in which both the parties are represented are taken upon the date or dates fixed. The findings of the Labour Commissioner are in a vast majority of cases accepted by the parties as a matter of convention but there is no statutory obligation on the parties to do so. The services of Mr. Khareghat, having been placed at the disposal of the Government of India as a Vice-Chairman of the Imperial Council of Agricultural Research. Mr. Vishnu Sahay, I.C.S., Cane Commissioner, has been appointed as Labour Commissioner in addition to his own duties from the end of March 1939. The Director of Industries is, however, still the administrative head of the Labour Office, Commissioner for Workmen's Compensation and Registrar of Trade Unions. He also controls the Chief Inspector of Factories and Boilers. The work of the Labour Office of the United Provinces falls under the following three heads:

- (1) Settlement of Industrial Disputes and disposal of individual complaints received from workmen or workmen's organisations.
- (2) ('ollection, compilation and publication of accurate statistics of labour conditions and welfare as suggested by the Labour Inquiry Committee; and
- (3) Superintendence, direction and control of Labour Welfare Work.

Minister-in-Charge: The Hon'ble Dr. KAILASH NATH KATJU, M.A., LL.D.

Parliamentary Secretary: ACHARYA JUGAL KISHORE, M.A. (OXON.), M.L.A.

Director of Industries, Commissioner for Workmen's Compensation, Registrar of Trade Unions, and officer-in-charge, Labour office :-J. NIGAM, L.C.S.

Chief Inspector of Factories and Boilers: K. K. BATLIWALA, M.I. MAR. E., A.INST. NAV. E. Labour Officer: Dr. R. B. GUPTA, M.A., PH.D. (ECON.).

SIND.

Sind, since its separation from the Bombay Presidency, has modelled its administration of all labour questions on Bombay and the Government of Sind have appointed a Commissioner of Labour who is also Registrar of Trade Unions. The Labour office compiles Monthly Price Index Numbers of wholesale and retail prices in Karachi. It also compiles annual index numbers of agricultural wages and retail prices in Sind. An unemployment Committee, with the Assistant Director of Industries as its Secretary was appointed by Government in 1938. No report of the Committee has been issued as the figures of the educated unemployed are still being collected (June 1939.) The posts of Chief Inspec-tor of Steam Boilers and Smoke Nuisances and Inspector of factories are held by one officer in Sind who is also an Inspector under the Payment of Wages Act. Further, all District Magistrates in Sind have been appointed Inspectors under that Act. The Workmen's Compensation Act is administered by the Sub-Judges in the mofussil and the Judge of the Small Causes Court in Karachi who have been appointed ex-officio Commissioners for Workmen's Compensation in Sind.

Commissioner of Labour and Registrar of Trade Unions: T. C. THADANI, B.A., LL.B.

OTHER PROVINCES.

In Assam the main question connected with labour is that concerning the recruitment of labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the local Government are not very actively interested in the special consideration of other labour questions. Labour conditions in Bihar, Orissa, Assam, and the North West Frontier Province are not considered such as to justify the appointment of Labour Commissioners, In Orissa, the Revenue Commissioner (E. C. ANSORGE, C.I.E. I.C.S.), is the Registrar of Trade Unions. In the North-West Frontier Province, the Secretary to Government in the Legislative Department has been entrusted with the work of industrial and labour disputes. In the newly separated Province of Bihar, the Director of Industries (V. K. B. PILLAI, I.C.S.) looks after all matters connected with labour but this Province has a separate Registrar Unions (E. O. LEE, I.C.S.). Trade A Labour Assistant to the Ministry has now been appointed in Bihar to help the Ministry in problems arising out of labour questions and to collect facts and figures concerning the conditions of life of the labourers, their wages, etc. In Assam, A. S. V. Acorr, I.C.S., is the Controller of Emigrant Labour but as no trade Unions have as yet been registered in the Province there
Labour Commissioner: VISHNU SAHAY, I.C.S. is no Registrar of Trade Unions functioning but

Commissioner, Ajmer, (AKHTAR HUSAIN, I.C.S.) is Registrar of Trade Unions.

LABOUR LAWS IN INDIAN STATES.

Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore, Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the factory law in British India by establishing mills or factories in the territories of Indian States. It is interesting, however, to note that His Highness the late Galkwad of Baroda decided to introduce a nine-hour day in all factories in Baroda State from August 1938.

ROYAL COMMISSION'S RECOMMENDATIONS.

The most important recommendation made by the Royal Commission on Indian Labour in connection with Government administration and of Governments to meet regularly in conference to discuss labour measures and against and seven for.

for purposes of the Act, the Registrar of Joint labour policy. It was suggested that the Stock Companies is ex-officio Registrar of Trade Council should meet annually and its president Unions. In Amer-Merwara, the Assistant should be elected at each annual session. The secretary of the Council should be a permanent official responsible to it for current business. The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such proposals; (2) to promote a spirit of co-operation and understanding among those concerned with labour policy, and to provide an opportunity for an interchange of information regarding experiments in labour matters; (3) to advice Central and Provincial Governments on the framing of rules and regulations; and (4) to advise regarding the collection of labour statistics and the co-ordination and development of economic research. On the 7th March 1935, Mr. P. N. Sapru moved a resolution in the Council of State urging the establishment of the Industrial Council on the lines suggested by the Commission. Mr. D. E. Mitchell speaking on behalf of Government expressed sympathy with the resolution. He did not deny that the creation of such an Industrial Council would be of very great value but there was no great hurry for it. He quoted the Commission and said they were not for its immediate establishment. situation had considerably altered since the recommendation had been made in 1931 and there was a possibility under the new constitution that labour would be decentralised. In that case there was the danger that legislation passed in autonomous provinces would come of matters connected with labour was for the into conflict with the centre. In view of this he setting up of an Industrial Council which would thought that the creation of such a Council at enable representatives of employers of labour that stage was not destrable. The resolution on being put to the vote was negatived by 22 votes

Sea Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West via Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line and the Lloyd Triestino. The Dollar Liue steamers are arrelable for Western available for Western passages only. are ordinarily other services between Calcutta and the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe.

Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, N. Y. K., Australian Commonwealth, and Royal Dutch Lines are the chief besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 11 days via Marseilles by P. & O. Express Voyage. following are the fares which are convertible at approximately current rates of exchange :-

fares from Madras are:-

Cabin class from £38 to 49 Single and £67 to £86 Return to Marseilles and £40 to £52 Single and £70 to £91 Return to London.

By the Anchor Line Ltd., the First class fares to Liverpool range from Rs. 733 to Rs. 867, Cabin class Rs. 493 to Rs. 733 and Tourist Rs. 400 to Rs. 533.

By Ellerman's "City" and "Hall" Lines fares from Bombay or Karachi to Plymouth ATO :-

Cabin class (Minimum) Marseilles Rs. 493, Return Rs. 867, Plymouth Single Rs. 533, Return via Liverpool Rs. 938.

Calcutta to London:

Cabin class, Single Rs. 600 minimum, Return Rs. 1,058 minimum.

By Bibby Line fares from Rangoon to London :-

lst saloon single Rs. 910, return Rs. 1,560. Rangoon to Marsellies, 1st saloon single

By the British India S. N. Co. Cabin class | Rs. 840. Rangoon to Marseilles, 1st saloon return Rs. 1.470.

> The Bibby Line fares from Colombo are as follows:-

> Colombo Marseilles single Rs. 710, return Rs. 1,240. Colombo London single Rs. 760. return Rs. 1,335.

The Bibby Line steamers carry 1st class passengers only.

By Henderson Line fares from Rangoon to Liverpool, 1st saloon are: -single Rs. 775, return (available for 4 months) Rs. 1,150. (available for 2 years) Rs. 1.875.

By Lloyd Triestino Line fares from Bombay to Brindisi, Venice, Trieste, Naples or Genos are:-

1st class Season £65, Off-Season £55, 2nd class Season £45, Off-Season £40, Economic class Season £30, Off-Season £25, Return Tickets available for 2 years, full particulars on application. 100 Days' Return Tickets 1st class £86, 2nd class £65. Economic class £42.

Sailings from Bombay to Italy and the Far East twice monthly.

INDIAN TRAIN SERVICE.

CIVIL AVIATION.

Lloyd during his Governorship of Bombay (1918-23.) The first air service was organised by the Government of India between Karachi and Bombay and was operated by the Royal Air Force. It was purely a Government venture and was established as a temporary and experimental measure during the fair-weather season of 1920, with the object of testing the extent to which an airmail service was likely to be used by the public. It was closed down as sufficent data as to running expenses had been collected and its continuance as a purely commercial concern was not advocated.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general develop-ment of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between

The development of internal air services in stimulated both Government and public opinion. India was first essayed by Lord (then Sir George) | India had become a party to the International Air Convention and under this was under a moral obligation to provide ground facilities for aircraft from other countries.

> The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances has already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt.-Col. F. C. (now Sir Francis) Shelmerdine, O.B.E.

> Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for sometime strongly pressed Government to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of Civil Aviation in India was only a matter of time.

The reflection of this foresight is mirrored today in the organisation of the trunk air lines of India. The aerodromes and landing grounds on the main air routes are controlled by 29 Indian Aerodrome Officers who are responsible England and Karachi, and the general increase for their safe operation, while the flying of divil aviation in all parts of the world and of personnel on the internal air routes is 90 per cent, vialts of flyers of different nations to India, Indian. On the engineering side Indians are now

Companies and are already finding their way to responsible positions as Aircraft Inspectors with the Directorate of Civil Aviation.

Development of Indian Air Services.—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was on 30th December 1929, extended to New Delhi, mails from and for Europe being carried to and for each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative -course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mail. Passengers were also carried by this service. like the earlier special arrangement with Imperial Airways, was obviously a transi-tional plan. It came into operation early in 1932. It filled the need of the moment pending the development of a permanent scheme, Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col. Shelmerdine before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the developement of private enterprise or through the institution of Government owned services.

The arrival of acute financial stringency following on the world depression, necessitated the abandonment of the Government Karschi-Calcutta service in 1931. Four Avro-10 acroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Coun-

taking their places not only as Assistant but as to-date aeroplane was purchased for their use Chief Ground Engineers to internal operating and their old one was retained for the use of senior Government officials.

> Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and Imperial Airways, Ltd., for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England-Australia air service. A private company Indian Trans-Continental Airways, Ltd., was formed with rupee capital and a majority of Indian Directors, in which shares are held by Imperial Airways Ltd., 51 per cent, Indian National Airways Ltd. 25 per cent. and the Government of India 24 per cent. This Company then operated jointly with Imperial Airways a weekly service from Karachi to Singapore, where it connected with Qantas Empire Airways' weekly service from Singapore to Australia.

> Indian National Airways Ltd., was established largely through the efforts of Mr. R. E. Grant Govan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop feeder and other internal air services in North India. They opened a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with Under prospects of extension to Assam. a ten year contract with the Government of India they also instituted a weekly service from Lahore to Karachi, to link with Imperial At-ways London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935, owing to lack of public support.

Before all these developments, however, the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi service. From the beginning of 1985, Imperial Airways London-Karachi service, and with it the Trans-India service to Calcutta and the feeder services Karachi-Lahore and Karachi-Bombay-Madras, were operated twice weekly. The second trans-lndia service was extended to Australia in 1986.

Empire Air Mail Scheme.—The initiative in this development was taken by His Majesty's Government. In September 1936, an agreement was reached with the Government of India and the Government of India simultaneously negotiated with the Government of Ceylon for the extension of the Karachi-Madras service to The new services were inaugurated on Colombo. the 28th February 1988, with four services a week each way from London to Calcutta. The fre-quency of the two feeder air mail services in India, viz. Karachi-Madras-Colombo and Karachie Lahore was simultaneously increased to four each service maintaining connection with the easterly and westerly flights of the main trunk service. The frequency was increased to five when the services in the Australian section were augmented at the end of July 1988. Three of tess of Willingdon, who had newly arrived in the main services are operated by 'C' Class Flying India on the appointment of the Earl to be Boats between Southampton (England) and Vieeroy. The machine continued in Their Sydney. The other two are operated as a tem-Excellencies' service until 1934, when a new upportant property of the continued in the sydney. The other two are operated as a tem-Excellencies' service until 1934, when a new upportant of the continued in the main services are operated by 'C' Class Flying Boats between Southampton and Karachi, whilst between Karachi and Calcutta landplanes of the Atlanta Class continue to be mostly employed. The Atlanta machines will be replaced by the new 'Ensign' Class landplanes which when available will operate the entire route England (Croydon) to Calcutta twice weekly in both directions. Half the fleet of Ensign aircraft operated on this route will be owned by Indian Trans-Continental Airways Ltd.

All first class mails to Empire participating countries are now conveyed by air. The letter postage from India to England is 2½ annas for ½ an ounce, so that for those who had been using the air mail there is now a great economy 2½ annas instead of 7½ annas per ½ oz. For others there is the advantage that for the same postage as before (2½ as.) their mail is now conveyed in a very much shorter time by air instead of by sea and land. Complete operational services for both day and night flying are being organised, and the new services will be progressively speeded up to provide a still greater saving of time.

New air services.—Apart from the preparations for the inauguration of the Empire Air Mail Scheme, the year 1937 saw the beginning of two new internal air services. Messrs. Tata Sons Ltd., established a service between Bombay and Delhi, calling at Indore, Bhopal and Gwalior. At present, the service runs twice weekly during the cold weather season (October to May). Besides this Tata Sons have extended their Bombay-Trivandrum service to Trichinopoly where it connects with one of the four main services to Colombo. This service is also operated seasonally during the fine weather months. Surcharged air mails are carried on both services.

Air Services of India Ltd., Bombay a new company established in 1937, inaugurated in November, 1937, an air service from Bombay to Bhavnagar, Rajkot, Jamnagar and Porbandar in the Kathiawar States. The service operated during the fair weather months and is at present scheduled to run six times weekly in each direction. In each direction surcharge mails are now carried on this service.

During the year 1938 preparations were in progress for two other new air services. One was the extension of the Karachi-Lahore service to Delhi thrice per week. This service, which commenced in November 1938, is operated by Indian National Airways, and provides Delhi with a connection by air with the flying boat services at Karachi. The other new service which was inaugurated in the first week of January 1939 is operated by Air Services of India Ltd. thrice weekly between Bombay and Kolhapur via Poona. Both these services are scheduled to run during the fair weather season only.

The K.L.M. (Dutch) and Air France (French) services continue to operate across Indis; the former increased their frequency to three services per week towards the latter part of 1987.

Statistics.—Statistical information illustrating the progress of Civil Aviation in India is published in the Annual Report on the Progress of Civil Aviation in India, copies of which are obtainable, price Re. 1 net from the Manager of Publications Civil Lines, Delhi, or through any agent for Government Publications.

Instruction in Aviation.-It is satisfactory to note the speed with which young Indians have qualified themselves in almost every sphere of commercial aviation, considering the high qualifications, long and expensive training and paucity of facilities for this training in India itself. For instance, although the flying club movement started only 10 years ago, four out of the seven subsidised clubs have Indian instructors in full charge and other clubs have assistant Indian instructors. At one time it was essential for instructors to be trained in England but now it is possible for this training to be obtained in India. It must still be recognised that certain forms of advanced training are not yet available in Indla although Government has recently arranged a limited amount of training for specially selected pilots on the Government owned Avro X three engined aeroplane. The training of Aerodrome Officers also is now carried out in India at Karachi Air Port under the supervision of the Chief Aerodrome Officer.

Flying training is given in India through Clubs and the Aeronautical Training Centre of India There are ten flying clubs in all, namely:—The Bengal Flying Club (Dum Dum), Bombay Flying Club (Dum Dum), Bombay Flying Club (Dum Dum), Bombay Flying Club (Dum Dum), Monthern India Flying Club (Lahore), United Provinces Flying Club (Cawnpore and Lucknow), Madras Flying Club (St. Thomas' Mount), Jodhpur Flying Club (Jodhpur), Hyderabad), and Jaipur Flying Club (Bagnaner). The first seven of these clubs are subsidised by Government. The Aeronautical Training Centre of India Ltd., Clvil Aerodrome, New Delhi, opened an extensive school at the Civil Aerodrome, New Delhi, opened an extensive school at the Civil Aerodrome, New Delhi, in October 1935, for giving training in aviation. The Centre is equipped to take 80 students at a time for training as pilots, ground engineers and wireless operators.

The club movement dates from March 1927 when as a result of the interest taken in the subject by Sir Victor Sassoon, Bt., M.L.A., it was discussed by the Indian Legislative Assembly, An encouraging atmosphere was thus created and in the same month the Aero Club of India and Burma was formed. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Govenrment grants which were at this time proposed. The formation of four local flying clubs followed, In December 1927 the Government of India received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the clubs' income and expenditure until the grants became available. This offer the Government accepted and further decided that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. The grants commenced on 1st April 1928.

Three more clubs were started later, the Northern India, the U.P. and Madras, and seven clubs are now subsidised.

Subsidised to flying clubs.—Under the subsidy scheme which expired 31-3-39 each club rectived a fixed subsidy of Rs. 12,000 a year if it maintained three machines, Rs. 10,000 for two machines or Rs. 8,000 for one machine. In addition a bonus was paid of Rs. 100 for each 'A' pilot trained ab-initio and Rs. 100 for each 'A' licence renewed. The maximum subisdy payable to any club Rs. 40,000. To enable the clubs to earn the maximum amount each year, an additional bonus on flying hours was granted.

New Subsidy Scheme.-The term of the Government assistance to the seven subsidised flying clubs has now been extended for a further period of three years ending on the 31st March 1942, with certain modifications as described below :-

A fixed annual subsidy not exceeding Rs.16,000 per annum to each club at the following rates, dependent on the number and class of aircraft maintained for the use of members :-

No. of	(Class 'A'	Class 'B'	Class 'C'
alrcraft.		Rs.	Rs.	Rs.
1		10,000	8,000	6,000
2		12,000	9,500	7,000
3		14,000	11,000	8,000
4 or mor	е	16,000	12,500	9,000

The number of aircraft made available and their classification will be determined by the Director of Civil Aviation in India.

- (ii) Bonuses not exceeding Rs. 9,000 for any one financial year to each club at the following rates :-
 - (a) Rs. 300 for each member trained abinitio on club aircraft as an 'A' pilot.
 - (b) Rs. 100, for each member who renews his or her 'A' licence qualifying by flying not less than 5 hours solo on club aircraft.
 - (c) Of the amounts mentioned in (a) and (b) above, a sum of Rs. 100 and of Rs. 50 respectively is paid to the pilot concerned.
- (iii) Bonuses not exceeding the sum of Rs. 1,000 for any one financial year will also be paid to Jodhpur Flying Club at the rates mentioned in (ii) above.

The new system is designed to serve a threefold purpose-

- (a) To encourage the clubs to re-equip themselves with up-to-date training types:
- (b) To encourage more people to keep up flying by reducing the cost of obtaining a license; and
- Likewise to encourage those who already hold licences to keep up their flying by reducing the cost of renewing the licence.

Aero Club of India and Burma.—The part which this organisation played in the formation of the flying club movement already has been referred to. The Aero Club of India and Burma besides being the parent club to which the flying clubs are affiliated is also the representa-

connection with customs carnets, diplomatipermits, licences for the carriage of arms an camera and maps for flights abroad.

Government Scholarships.-Further assist the training of Indians in aviation with view to their eventual employment in Govern ment service or in civil aviation generally, th Government have awarded scholarships or rer dered financial assistance in various forms from time to time as explained below :-

Aerodrome Officers.—In 1929, ten Indian were selected for a two years' course of trainin in England to fit them for Aerodrome Officer' duties. Of these six completed the course and qualified. In 1934, two more officers were select ed and trained in India. In addition 21 Indian have been engaged as Assistant Aerodrom Officers, Persons appointed to these post usually possess some experience of aviation bu receive training in their duties after joining A training class has recently been established at Karachi Air Port.

Aircraft Inspection Staff.—In 1930, two Indians were sent for 34 years' training in England and qualified as Assistant Aircraft Inspectors In 1935, two more scholars selected for similar training have since completed their train ing and returned to India and appointed Assis tant Aircraft Inspectors. Another Scholar habeen recently selected for training in electrical wireless and instrumental equipment. Aircraf examiners in Government employ are also being given further training to equip them with necessary qualifications for promotion to higher One examiner has received and another is receiving such training in England and more will be sent later as and when convenient.

Pilot Instructors.—In 1932, a scholarship for the Pilot Instructor's course in England was awarded to an Indian who is now Pilot Instructor of one of the flying clubs in India. Since 1986-37 as facilities for such training had become available in India, further training was carried out here. With the financial assistance as provided upto February 1939, five Indian 'B' pilots have been trained as Pilot Instructors, of whom four are already employed with flying

Indian Pilots and Empire Air Mail.—In 1935, Imperial Airways sent an Indian 'B' licence pilot to England for advanced training with a view to his employment as a First Officer. This pilot was given further training by Government in 1938 in the Avro X Aeroplane on his return to India. He was confirmed in his appointment as a First Officer, but subsequently resigned. Pursuing the policy of training selected Indians as First Officers for the Empire air mail routes Government gave assistance in 1935 to another Indian, but he did not complete his course. In 1936 assistance was given by Government to a third Indian who has since completed his training, and it is hoped will be offered an appointment as First Officer. Early in 1939 a selection was made of three Indian 'B licence pilots for training in England. Two of these are receiving scholarships from Imperial Besides being the part of the fiving clubs are affiliated is also the representative in India of the Federation Aeronautique Vice-Chairman of Indian Trans-Continental Internationale, the Royal Aero Club of Great Airways Ltd. Imperial Airways intend to Britain and the Automobile Association. The offer these pilots employment as First Officers Aero Club also serves the private aviator in on completion of their training.

Advanced Training of Pilots in India.—There is no training school in India tor giving advanced training to commercial pilots to enable them to obtain endorsements on the 'B' licences to fly multi-engined aircraft. Since 1937, Government has placed its three engined Avro X at the disposal of selected 'B' licence pilots for this purpose. In 1937, sky pilots were afforded some degree of financial assistance for the training. Owing to the success of the scheme two further schemes were sanctioned in 1938. Under the first scheme, two pilots received training on their own expense and two at half the normal flying rate. Under the second scheme, nine commercial pilots were given 5 hours flying instruction each at Government expenses. Out of these, four were again selected for further training to complete 10 hours solo in this aeroplane. This scheme was completed early in 1939.

Wireless Operators.—In the course of the last 3 years assistance has been given to 7 Indians to obtain training in wireless operation for employment as aircraft wireless operators. Six have completed their course and qualified.

Engineering Scholarships.—In 1933, scholarships were given to four Indians for a 2½ years' course of advanced engineering training in England. Those selected already possessed ground engineers' licences and the assistance was given with a view to their obtaining the higher category licences. Assistance has also been given to an Indian to be trained as a welder.

Research.—The Government have assisted an Indian over a period of 3½ years to carry out aerodynamic research work in England and to take out a patent for his invention which is one of considerable promise.

Indian Air Races.—The first Indian Air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1932, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willingdon) and the Countess of Willingdon, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December 1934, to be flown from Calcutts to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes, in addition to the Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added, "Air racing, like every other form of racing, costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now." The only funds regularly available for the purpose are the interest on one lake of rupees given by Sir V. Sassoon to form an Irwin Flying Fund

for flying sport prizes. The fund is held by a Trust the members of which are the Director of Civil Aviation and the Chairman of the Aero Club.

The club held in February, 1936, a two-day race from Madras, via Bombay to New Delhi. Entries were received not only from different parts of India but from abroad. The race was a great success. It was won by an Indian amateur competitor and was regarded as having contributed in an important degree to general air-mindedness in India.

All-India Air Rally.—On the 5th and 6th December 1938, an All-India Rally was held at Karachi on the occasion of opening of the newly constructed Air Port Building. His Excellency the Governor of Sind performed the opening ceremony and gave away the prizes to the winners.

All flying clubs in India affiliated to the Aero Club of India and Burma participated. The Viceroy's Cup given for the best aggregate results obtained by one of the competing clubs was won by the Karachi Aero Club. The Sir Victor Sassoon Challenge Trophy given for the best all round progress during the year was awarded to the Karachi Aero Club.

Ground Organisation.—(1) Aerodrome control and lighting.—Aerodrome Control Officers in India are stationed at the following publicuse aerodromes on the trans-India route and feeder routes, Signals in accordance with Section II of Annex D of the international Air Convention are displayed.

- (i) Trans-India.—Karachi, Jodhpur, Delhi, Cawnpore, Allahabad, Calcutta.
- (ii) Karachi Madras Colombo.—Karachi, Ahmedabad, Bombay, Hyderabad, Madras.
- (iii) Karachi-Lahore.—Karachi, Jacobabad, Lahore.

The Aerodrome Control Staffs keep watch from dawn to dusk at main aerodromes on the trans-India route and service is given at all the aerodromes mentioned above provided that advance notice of requirements is forwarded in sufficient time. The movements of aircraft flying on routes (i) and (ii) are reported free of charge by W/T.

Electric night lighting equipment has been installed at controlled aerodromes between Karachi and Calcutta, and this route is marked by airway beacons. The route Karachi-Bombay is being lighted. Lighting of the route, Karachi-Jacobabad, is reaching completion. Aerodrome lighting, where available, will be provided on receipt of due notice. Particulars of the aerodrome and lighting systems are given in Notices to Airmen published by the Government of India. Copies of the Notices may be obtained on application.

Trans-India Seaplane Route.—Seaplane stations have been established at the following places.

Karachi Harbour, Udaipur (Rajsamand Lake), Gwalior (Madhosagar Lake), Allahabad (Jumna River), Calcutta (Hooghly River).

rather than the rule up to now. The only funds regularly available for the purpose are the interest on one lakh of rupees given by Sir V. Sassoon to form an Irwin Flying Fund

seaplanes only with specific permission. Wire- Indian Central Legislature passed the Indian less telegraphy and meteorological services are Aircraft Act, 1934, replacing the old Act and available. The seaplane stations at Karachi giving powers to the Government of India to

- (2) Wireless Telegraph Service.—Details of the Aeronautical W/T stations in India and the wireless services provided are published in Notices to Airmen. On the trans-India route and the Karachi-Madras route the W/T Stations are open daily at fixed hour to serve the schedules of the regular air services. Outside the regular controlled aerodrome.
- (3) Meteorological Services.—The meteorological services and the facilities available in India are set out in the "Meteorological Organisation for airmen (M.O.A. Pamphlet)." The M.O.A. Pamphlet is issued by the India Meteorological Department and is revised and re-issued periodically. Copies may be had from the Manager of Publications, Civil Lines, Delhi, and the office of the High Commissioner for India, India House, Aldwych, London, W.C.2, or through any other accredited agents or book-sellers (price Rs. 1-2-0 or 1s. 9d.).

Legislation.—Air Navigation in British India was till 1934 governed by the Indian Alcraft Act, 1911. In August 1934 the British

and Calcutta are equipped for night operations. make rules to meet modern developments and to enable them to implement the provisions of the International convention for the Regulation of Aerial Navigation, 1919, to which India is a party. During the same session the Indian Carriage by Air Act defining the law of Carriage by air in India was also enacted.

The Indian Aircraft Rules, 1920, have been hours, service will be given subject to prior arrangement with the Aerodrome Officer at a 1007 1937

> Director of Civil Aviation in India .- Mr. F. Tymms, C.I.E., M.C.

THE SUEZ CANAL.

Opened formally in 1869, the Suez Canal constitutes an artificial waterway about 105 miles long, linking Port Said on the Mediterranean with Suez on the Red Sea. The Canal shortens the route from England to Calcutta and Bombay by 3,660 and 4,500 miles respec-tively, also, of course, substantially reducing the distance to Australia. Using the Canal, the Mediterranean fleet could reach the Singapore base in less than three weeks. The alternative route round the Cape lengthens Britain's lines of communications by about 4,000 miles.

Control and Finance.

The Suez Canal is controlled by a company, whose property, valued in the market at £120,000,000 passes to the Egyptian Government when the concession expires on November 17, 1968. This is of course in default of other arrangements. The British Government owns 44 per cent. of the shares, thanks to Disraeli's selebrated coup in 1875 when for £4,000,000 he bought the majority of the bankrupt Khedive's holdings. The shares are now valued at £84,000,000 and the current profits amount to about £3,500,000 a year. To date, they have earned the British Treasury some £43,000,000 in dividends. Most of the remaining shares are held in France, but not by the French Government, which does not own a share. The Board comprises 21 Frenchmen, 10 Britishers, a Dutchman and an Egyptian. Only three of the British directors represent the British Government; the remaining seven represent British shipping and commercial interests. Incidentally, nearly 60 per cent. of the total tonnage passing through the Canal is British. The Chairman of the Company is the Marquis de Vogue. The enterprise is managed in Egypt, has its London offices at 6, Bishopsgate and holds its monthly Board meetings in Paris.

Development.

Since the War, the work of widening, deepening and straightening the Canal has been taken in hand with redoubled vigour. Operations are When the Canal was directed from Ismailia. opened in 1869, the width was 72 feet and the depth about 28 feet 2 inches. The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no Eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. Today, the Canal is on an average, 45 feet deep and 70 yards broad. It can be traversed in just under thirteen hours. About 15 ships can pass in the 24 hours. One ship has, however, still to the up to let a second pass, though there is plenty of room for both. It is feared water displacement might bring about a collision.
There would also be a danger of grounding.
The biggest vessel yet to navigate the Cut.
was of 27,000 tons. It is doubtful if vessels like the HOOD and RODNEY, both over 42,000 tons, could navigate the canal easily in its present state. Further expansion appears inevitable.

Neutrality.

Absolute neutrality is the law of the Company as was made clear during the Italo-Abyssinian war. Referring to the request that the Canal should be closed to Italian ships, the Marquis de Vogue, Chairman of the Board of Directors, addressing the annual general meeting of the Company on June 8, 1936, observed: "It (neutrality) is stated in the Act of Concession and in the Statutes. Furthermore, it is guaranteed by an international Convention of 29th October, 1888, expressly confirmed by the Treaty of Versailles. Article I of this Convention says, in the following terms, that, "the Suez Maritime Canal will always remain free and open, in time of war as in time of peace, to all merchant or war vessels, without Flag distinction," and it adds that, "the Canal will never be subject to the right of blockade." "If, by an act of force, which nothing entities one to anticipate, any Power thought of forbidding entry into the Canal to ships of another Power, that gesture would be equivalent to an act of war with all its consequences. As for your Board, the question of closing the Canal could not arise and they were never called upon to discuss it."

The provisions of the Convention are that subject only to the exercise of the right of legitimate self-defence and to action to injure the safety of the canal there can be no restriction, provided that the rules are observed, on the free use of the Canal. On two occasions in the past the Canal has been closed and on a third the question of free use was raised. The first was in 1882, six years before the signature of the Conventions when during the revolt of Arabi Pasha against the Khedive of Egypt, the safety of the Canal was thought to be imperilled. During the Spanish American war of 1898 the attempt of the Spanish Fleet to call at Suez on its way through the Canal was frustrated by the Canal authorities in accordance with the provisions of Article IV of the Convention. The third occasion on which the Canal was closed was during the Great. War when free access and transit was stopped for a short period during which the Egyptian territory and the safety of the Canal were actually endangered by the advance of the Turkish forces.

Report for 1938.

The latest annual report of the Suez Canal Company states that in 1938 shipping through the Canal was slightly less than during 1937, which year had been a record exceeding even 1929, which had previously been the best year. The report for 1938 states:—

To the reduction in sterling receipts resulting from this fall in traffic was added the effect of two reductions in dues; one made on April 1, 1937, the influence of which was felt during the first quarter of 1938; the other, which was only in force during the last two weeks of the year. As to expenditure, it would have remained approximately the same had it not been for a monetary factor; the rise in the price of gold which brought about increases in charges for debentures, for interest on and amortization of shares, and for the service of certain debts at present on the gold basis.

The reduction in receipts and the increase in expenditure had brought about an appreciable reduction in the net results of the year, which, expressed in Egyptian pounds, were 18.6 per cent. less than 1937. On the other hand, the depreciation of the French franc had once again swollen, although to a lesser extent than last year, the results which, converted into French francs at the average rate for 1928, showed a surplus of receipts of 953,021,522.81f., an lacrease of 11.8 per cent. over 1937.

As last year, to this figure must be added a purely financial profits which amounted to 65,074,859·74f, and arose from the advantageous conditions in which, during the year, transfers of funds had been made between London and Paris.

Traffic through the Canal.

Traffic through the Canal in 1938 amounted to 6,171 transits, representing 34,418,000 tors not register. Although this tonnage showed a reduction of 2,073,000 tons, or 5·7 per cent.. on the exceptional figure for 1937, it was nevertheless greater than that for any other year, in particular 1929, a year of great commercial activity.

The reduction, as compared with 1937, was due for the greater part to the falling off of Italo-Abyssinian traffic, which, from one year to the other, dropped by 1,222,000 tons i.e., more than one-third. Apart from this particular traffic, the reduction was of 851,000 tons i.e., 2.6 per cent.

The classifications of net tonnages by nationalities showed that British traffic still occupied the first place, with a 'onnage of 17,358,000 tons, which was 50·4 per cent. of the total against 47·3 per cent. in 1957. On the other hand, Italian traffic, while still occupying second place had fallen by more than one-fifth from one year to the other, and its percentage was now only 13·4 per cent. after having beau 16·1 per cent. in 1937 and 20·2 per cent. in 1936. Then came Germany, the Netherlands and France.

The number of passengers had fallen from 697,800 to 479.802, the reduction being mainly in passengers of Italian nationality.

Goods through the Canal had, as usual, been more affected than tonnage by causes of depression. The total weight of goods reached 28,779,000 tons 12.2 per cent, less than in 1937.

Under the terms of the agreement reached by the Suez Canal Company with the Egyptian Government (as a corollary to the Anglo-Egyptian Treaty), the Company appointed the first Egyptian director to its Board, proposed to appoint a second Egyptian director shortly, and admitted Egyptian employees to its administrative staff in Egypt. It also contributed an amulty of £300,000 to the revenues of the Egyptian State,

During the latter part of 1938 and early in 1939, Italian claims to a share in the Suez Canal administration began to be put forward and were formally voiced by Signor Mussolini in his speech of March 26, 1939. The exact nature of the Italian demands was not stated, but it is generally believed to include a share in the Suez Canal administration, two directorships and the right to acquire shares in the Company. The demand has also been put forward by Italian spokesmen that the Suez Canal dues should be reduced as they constituted a heavy burden on Italian shipping passing between Italian ports and Massawa in the Red Sea. It may be noted, however, that these specific demands were never placed before the other Powers and the issue did not come to a head.

Travel in India.

Thirty years ago, a tour in India was possible observation such as the customs, religions, only to the wealthy, the islaured and those philosophy and art of one of the oldest civilisa-who had friends in the country. The cost tions. of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheaf of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd-Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravanserai.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and via Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Mahratta campaigns; they are but one—the Mahrattas -of the races within races that populate this vast country where two hundred and twentytwo different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds the tinkle of the temple bells, the throb of the drum, the chant of the 'muezzin' announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharma, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects of bygone days, of diverse

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give; the tiger in the forest, the great mahseer in many rivers. the wily snipe on the jheels, the strong winged duck, the jinking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway via the Ellora and Alanta Caves, Sanchi, Gwallor, Agra and Muttra or by the B. B. & C. I. Railway via Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as "the most remarkable and interesting example of a Hindu palace of an early age in " Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the Taj Mahal. Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's comin in the vault of the finished Taj. The building is better known than any other in the races, of absorbing subjects for study and world. Visit it by moonlight and later by

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the actrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnade. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the creneiated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpases of snowy structures so light and graceful that they seem to rest on air; of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahai, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and nobie dignity or, with a more sovereign grace, crowns its red bastions with so wonderous a collection of palaces, mosques, halls of state, baths, kiosques, baiconles and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Deihi Fort which Shah Jahan built when he transferrred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at Its best in Fatchpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1589 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great meaque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pligrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthrall him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghal Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, the Kashwir Gate beneath which some still

salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for its unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Puarana Qila and Shahjahanabad, the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India. Rajputana, the iand of chivalry, attracts the visitor as few places do. Alone at **Udajpur** is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpleee of Jain architecture, contain some of the finest carvings in India Forests of marble columns, carved and pollshed till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence most of the recruits for the Indian Army some. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canai Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Goiden Temple). The pavements of the sacred tank are all of marble from Jalpur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

memorials of the Mutiny, Hindu Rao's house. Lahore grew in importance with the dawn of the Kashmir Gate beneath which some still Moghul supremacy when Babar, the founder of that dynasty, made it a place of Royal | Dawn on its capitol. Incongruous as it may Residence, reminiscences of which are to be | seem, in Puri all caste vanishes. The signifound to-day in the pleasure gardens, tombs, mosques and pavillions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier, is rich in historical association and has from time immemorial been the route by which conquering hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir. described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain deer on the hill tops.

For those who have arrived at Delhi via Bombay an interesting return trip can be made via Benares and Calcutta. Many visitors, however, enter India via Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. in front of the gate of the temple is the famous black marble pillar . one of the most beautifully worked things in India with a tiny figure of the it during the Mutiny against terrific odds

seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surva.

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation: "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kuilasa. north of Lake Manasa, where the great threeeyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreathe in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archeology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakah-mans, son of King Dasaratha of Ayodhya and brother of Rama, the mythical hero of the Ramayana, the epic poem of the Hindus: but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors wend their way to the Residency and pay homage to the gallant band who held until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Nizagan and wonderful seenery.

Madras is the capital of the Madras Presidency and the third largest town in India. and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahashasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At Madura and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of seeing Burma for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhodoendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet against you can see emerald green paddy fields and great windiag rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the flerce Black Lisu. Yet you will also find civilisation in the big cities like Bangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrimsthan any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India; Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos. Cook & Son, Ltd., the American Express Co., Cox's & King's (Agents) Ltd., Army & Navy Stores, Grindlay & Co., Mears. Jeens & Co., Bombay, etc., and the Publicity Officers of all the more important Railways as well as the Manager, and the Indian Railways Publicity

Bureau, 57, Haymarket, London, will work out tother places almost as well-known containing tours to suit the convenience of individual Many of the leading tourist companies will also arrange for inclusive and couducted tours. There are certain places, which are very well-known such as Delhi, Agra, Banares, Darjeeling, Jaipur, the Khyber Pass, Kashmir but there are innumerable a visit. and Mysore,

sights which cannot be equalled in other parts of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Ava and Amarpura nearby are well worth

Uruguay .- 5, Fairlie Place.

Venezuela .- 13A, Sudder Street.

N. B.—There are at present no Consuls for Costa Rica, Liberia, Salvador and Mexico at Calcutta.

The Consulates for Guatemaia and Chile have been abolished.

Air Routes.

- Trans-Continental Air Routes Across India .- Air services operating from Europe to and across India to the East are as follows :-
- (1) Imperial Airways and Indian Trans-Continental Airways Limited.

The two companies above mentioned now operate five services each way per week between India and England. Of these, three services are operated by Imperial Airways Limited with 'C' Class Flying Boats between Southampton and Sydney. The other two are operated jointly by Imperial Airways and Indian Trans-Conti-nental Airways Limited between England and Calcutta. On the landplane route across India aeroplanes of the Atalanta Class continue to be employed. The Atalanta machines are to be replaced by the new 'Ensign' Class landplanes which when available will operate the entire route England (Croydon) to Calcutta twice weekly in both directions. During the summer season all services operate to a 2½ day schedule between England and Karachi. The flying boat route between Calcutta and Karachi touches at Raj Samand, Gwalior and Allahabad whereas the landplanes call at Jodhpur, New Delhi, Cawnpore and Allahabad.

- (2) K.L.M. and Air France.
- K.L.M. (Dutch) operate a regular service thrice per week from Amsterdam to Bandoeng, and Air France once weekly from Paris to Hanoi. Both the services operate to a 21 day schedule from Europe to Karachi and their route across India is from Karachi via Jodhpur and Allahabad to Calcutta.
- B. Indian Air Services:-There are three companies operating scheduled air lines in India. They are :-
- (1) Tata Sons Ltd. (Aviation Department) Bombay .- Tata Sons Limited commenced operating a weekly air mail service between Karachi and Madras in 1932, connecting at Karachi with Imperial Airways' service. The service was duplicated from January 1935.

With the introduction of the Empire Air Mail Scheme the service was extended to Colombo baggage allowance and conditions of carriage of and increased in frequency to four times per all the services referred to at A. and B. above week. The frequency was further increased to may be obtained through any travel agent.

five times per week from the end of July 1938. The route is from Karachi via Bhuj, Ahmedabad, Bombay, Hyderabad, Madras and Trichinopoly to Colombo. In 1935, Tata Sons established a weekly service to Trivandrum from Bombay via Goa and Cannanore connecting at Bombay with one of the Karachi-Madras Services. This service has since been extended from Trivandum to Trichinopoly connecting there with one of the Karachi-Colombo services. From November 1937, the Company began a bi-weekly service from Bombay via Indore, Bhopal and Gwalior to Delhi. The Bombay-Trivandrum-Trichinopoly and the Bombay-Delhi services are operated only during the fair season (October to April). Passengers, freight and mails are carried on all these services.

(2) Indian National Airways, Limited, New Delhi.—In December 1934, a weekly air mail service was started between Karachi and Lahore, connecting with the services of Imperial Airways at Karachi. In January 1935, this service was duplicated. With the commencement of the Empire Air Mail Scheme the weekly frequency of the service was increased to four and has since been increased to five.

From November 1938 the service was extended to Delhi thrice per week thus connecting Delhi with the flying boat services at Karachi. This extension operates only during the fair weather season. The route is Karachi—Jacobabad— Multan-Lahore-Delhi.

The Company are the principal agents in India for Imperial Airways and Indian Trans-Continental Airways Limited and maintain a fleet of large and small aircraft for charters.

- Air Services of India, Limited, Bombay .-This company was formed during 1936 and opened a regular service from Bombay to the Kathiawar States in November 1937. The service operates six times per week each way from Bombay to Porbandar via Bhavnagar, Jamnagar and Rajkot. This company inaugurated another regular service in January 1939 thrice per week between Bombay—Poona—Kolhapur.
- N.B .- Particulars of time-tables, fares

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order:—

Darjeeling. (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockville), and the Park.

Kangra Valley.—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaula Dhar Range buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmsala and Kangra. The best hotels at Dalhousie are Stiffle's Grand View and the Arraumoor; and at Dharmsala the Switzes's.

Kashmir.—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. B. & C. I.) from Bombay to Rawalpindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snowy outer ranges of the Karakoram and Himalaya. Visitors usually stay either at Srinagar or Gulmarg. At Srinagar one can live at Nedou's Hotel or in boarding houses, or one can hire a houseboat and live on the River Jhelum. At Gulmarg Nedou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal. (7,000 ft).—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern of the Himalayas. There are magnificent side of the Palni Hills overlooking the plains, landscapes and many historic temples and Reached by metre-gauge from Madras to Kodaikanal Road and thence by a 4 hours' which reaches Mussooric about two hours later. motor run. The Carlton is the principal hotel. The leading hotels are the Cecil. Charleville. There are also boarding houses.

(2,500 ft).-The nearest hill Matheran. body wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahableshwar. (4,500 ft.)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahableshwar. Mahableshwar is noted for its delightful vegetation: orchids and lilies bloom in April and May. Hotels:— Race View and Frederick.

Mount Abu. (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archæological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu.

Murree. (7,000 ft.)—The summer head-quarters of the Northern Command, Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil and the Viewforth.

Hackman's Grand, and the Savov.

Naini Tal. (6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metregauge railway. The Grand, Metropole and Royal are the best hotels.

Octacamund.—Familiarly known as Octy is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Government of Madras for six months of the year from April to September. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam Via Madras and thence by hill railway of Ootacamund. The principal hotels are the Savoy and Cecil.

Pachmarhi. (3,500 ft.)—Situated on a plateau in the Mahadeo Hills, is the summer quarters of the Government of the Central Provinces. delightful hot-weather health resort. by G. I. P. railway to Pipariya Via Jubbulpore, and a two hours' motor journey. The best hotel is the Hill.

Simla. (7,000 ft.)—The summer headquarters of the Government of India, is situated on several small spurs of the lower Himalayas. Towards the end of September, and in October and November Simla enjoys the best climate in the world. Reached from Bombay by taking G. I. P. or B. B. & C. I. train to Kalka and thence Mussorie. (7,500 ft.)—Much frequented on account of its exceptionally fine climate.

Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor. There are many good hotels and boarding houses. The leading hotels are the Cecil, Clarks, Corstorphans Grand, Gables (at Mashobra) and Wildiflower where it is necessary to change over to motor. cither by hill railway or motor. There are many good hotels and boarding houses. The

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering the subsidiary peaks of Kamet, whilst I. S. and exploration remains to be done in the world's Pocock of the Survey of India set up a highest mountain range. There are over fifty plane table at 22,040 ft. in the same district. Another notable early explorer was the famous of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a highest mountain range. There are over fifty plane table at 22,329 ft. on the Eastern Ibi Gamin, one or the Eastern highest mountain range. There are over fifty summits of 25,000 ft. and of these only two, Kamot (25,447 ft.) and Nanda Devi (25,600 ft.) have been scaled, whilst there are innumerlesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measure-ments is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

red the Sikkim valleys of Kanchenjunga and made attempts to climb Kangchenjau, 22,700 ft. and Pauhunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came and K2, both about 28,150 ft., though which lattle higher of the two is not certain.

Pienser Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these also made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed appears of 28,000 ft. Sir Francis Younghusband in the course of their work. Among these also made explorations in the Karakorams and pioneers must be mentioned the Schlagintweit Pass. The Duke of the Abruzzi also made a number of expeditions into this range and British climbers led by Mr. F. S. Smythe reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the Kamet (25,447 "nineties", and a bold attempt was made by to be climbed. A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshield made the first circuit of Kancheniunga and explored the Nepal side of the mountain.

A New Phase .- Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Bhotias were trained for mountaincering and, with the advent of first class porterage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakorams and W.W. Graham made a number of remarkable ascents. with Swiss guides, including an ascent of Kabru. 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas, who got within a few feet of that

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kanchen-junga, Pauhunri and Chomiomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal, Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Slingby also attempted Kamet at this time.

on Kanchenjunga.—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 25,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepalside, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 23, 200 ft. and the Lorsong Peak 24, 24, 44. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1031 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the fall during the expedition.

In the summer of 1931 a party of young eak. succeeded in reaching the summit of Mount the Kamet (25,447 ft.), the first peak over 25,000 ft.

Mount Everest .- There have been six Expeditions to Mount Everest of which those in 1921 and 1935 were reconnaissances and those in 1922, 1924, 1933 and 1936 attempts to reach the summit.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen, the Hon, C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. II. Somervell reached a height of 28,200 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 27,000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An Everest Committee was formed under the aegis of the Royal Geographical Society and the Alpine Club and Mr. Hugh Ruttledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in it as members were Mr. F.S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene climbed Kamet with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the and his party, but failed at a slightly greater ascent to the North Col. 23,000 ft. prolonged elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a laid during the expedition 40 feet ice wall on the North Col. slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling. one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col. by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd. But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft, and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit,

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp 111 to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darieeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise he marched to Everest and with a few porters succeeded in reaching 21,000 feet. He then went on alone and nothing more has since been heard of him, until his body was discovered near the site of Camp III, 21,000 feet, by Mr. E. E. Shipton's party in 1935.

Early in 1935 the Tibetan Government granted permission for a further attempt to take place from June 1935 to June 1936 inclusive.

As there was no time to organise an attempt on the summit it was decided to send out a small party under the leadership of Mr. E. E. Shipton. This had as its objects: Collection of data as to monsoon snow and weather conditions; ex-

the trying out of new men for the summit attempt: physiological observations: a steriophotogrammetric survey; examination of ice formations on the North Col.

This expedition proved that Everest cannot be ascended during the monsoon and that the only hope of an ascent is during the period immediately before the monsoon.

Conditions during the monsoon are extremely dangerous and the party had a narrow escape from an enormous avalanche that fell from the slopes of the North Col.

During the course of this reconnaissance two dozen peaks over 20,000 feet high were ascended.

THE 1936 EXPEDITION was led by Mr. Hugh Buttledge and included three of the 1933 climbers Messrs. Shipton, Smythe and Wyn Harris, and one of the 1933 Signals Officers Lieut. Smith Windham. It encountered exceptionally bad weather and unusual conditions. Before the monsoon, snowstorms rendered the mountain unclimbable and the usual pre-monsoon northwest wind was lacking to clear the snow away. However, Camp IV on the North Col. was established to schedule and the party were in position to attack the summit when the weather broke and two feet of snow forced them to retreat down the dangerous slopes of the North Col. To cap their discomforture the monsoon arrived on the exceptionally early date of May 24th. Two attempts were made to re-open the route to the North Col. but on both occasions the party were in great danger and the attempt had to be abandoned when Shipton and Wyn Harris were carried down by an avalanche and nearly lost their lives. Subsequently reconnaissance parties ascended the main Rongbuk glacier and examined the west side of the North Col. which. in spite of Mallory's unfavourable verdict, was found to be not only practicable but less dangerous in monsoon conditions than the east side.

The 1938 expedition consisted of seven climbers, H. W. Tilman, E. E. Shipton, F. S. Snythe, N. E. Odell, Dr. C. B. M. Warren, P. Lloyd and Capt. P. R. Oliver and was led by Mr. Tilman. It was considerably smaller than previous expeditions owing to economic reasons and because experience has shown that the small light expedition has as good and perhaps better chance of achieving its object than a large cumbersome expedition rendered comparatively immobile by its transport and tied down to a fixed plan. Though the expedition falled to reach the summit of Mount Everest it fully justified these beliefs and cost only £2,500 as against the £10,000 or more of previous Everest expeditions.

The expedition reached Rongbuk on April 6th and established Camp 3 on April 26th, Wind and cold made further advance impossible and the party descended to the Kharta valley for a rest and to recuperate from influenza, chills and sore throats. They returned in the middle of May during the commencement of the monsoon which broke on the unprecedented date of May 5th, one month to six weeks earlier than usual. The route up the North Col was forced in dangerous snow conditions and the party amination of alternative routes from the west, had a narrow escape from an avalanche. Camp

4 was established on May 24th but snowstorms drove the party down. It was then decided to regain the North Col from the west via the Main Rongbuk Glacier and Camp 4 was re-established after a difficult ice climb on June 5th. On June 8th Camp 6 was established by Shipton and Smythe with seven porters and the following day an attempt was made to reach the summit. Conditions, however, proved impossible owing to deep monsoon snow, and the party was forced to retreat after reaching a height of 27,300 ft. A further attempt by Tilman and Lloyd on June 11th met with no more success and the expedition had to be abandoued.

Aerial Expedition .- An interesting side to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Flt. Lt. A. McIntyre second pilot and Major P. T. Etherton, its London manager. Two specially equipped aeroplance, adaptations of the well-known Wapit, were provided. A special point in their equipment was the provision of compressed oxygen for supply provision of compressed oxygen to support through gas masks to the aviators at high the nine members of the expedition were annual altitudes. The expedition was not permitted along with nine Sherpa porters. Mountaineering altitudes. The expedition was not permitted along with nine Sherpa porters. Mountaineering altitudes. circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April permitted.

An interesting mountainfight of which details were published in 1933 was one from Risalpur to Gligit and back, undertaken by the R. A. F. at Risalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Risalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs. 20 mins, on the outward flight and in 2 hrs. 5 mins, on the return journey. From Glight the machines further proceeded upon flights over the Hunza, Nagar and Bakjot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken.

The year 1932 saw a well organised expedition The year 1932 saw a went organised expensions to Mount Nanga Parbat. It was conducted by Dr. Morkl, of Munich, and included Lt. R. N. Frier, of the Gligit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowiton, of Boston, U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-im of the weather. to an end by the break-up of the weather before they attained success.

The Disaster of 1934.—In 1934 Herr Merkl Several expeditions have lately been made returned to the attack with an even stronger into the Himalsyas by members of the party, which included a number of well-known Himalsyan Club, especially expeditions into

Frier and Sangster of the Indian Army as transport officers. Fatality early overtook the expedition, Herr Drexel dying of pneumonia. Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a route during which no fewer than nine lives were lost, Herren Merkl, Welzenbach and Wieland and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten. One or two spent a week without food or shelter.

In May 1937, another attempt was made to elimb Nanga Parbat by a German expedition, headed by Dr. Wien. News reached Simla on June 20 that disaster had overtaken the expedition and subsequently it was learned that the entire party of climbers with the exception of not very propitious for the ascent of the peak, which is considered to be more accessible in the autumn.

Another expedition to the Karakorams took place in 1934 under the leadership of 17r. G. Dyhrenfurth. All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party, state it to be more than 1,000 feet higher.

In 1934 Messrs, E. E. Shipton and H. W. Tilman, by a magnificent plece of exploration and mountaineering, succeeded in penetrating the hitherto impracticable Rishi Ganga to the glacier basin of Nanda Devi, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of ploneers such as Dr. T. G. Longstaff and Mr. Hugh Ruttledge. Messrs. Shipton and Tilman also crossed from Badrinath to Gangotri via the Satopanth Pass and explored the head of the Gangotri glacier. Profiting by the discovery of the route to the Nanda Devi basin an Anglo-American party, the leader of which was Mr. H W. Tilman, successfully scaled Nanda Devi via its south-west ridge, Messrs. H. W. Tilman and N. E. Odell being the climbers to reach the summit. This expedition was remarkable in that owing to the sickness of the porters the climbers had to carry their own camps up the mountain. This is the finest and most difficult peak yet climbed in the Himalayas.

Lt.-Col. C. F. Stoehr, R.E., and Lt. D. M. urn, R.E., lost their lives on 12th August Burn, R.E., lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahlgam in Kashmir.

German and Austrian mountaineers and Captains Sikkim by members of its Eastern Section.

In 1935 an attempt to scale Peak 36, 25,400 feet, in the western Karakorams was made by Lieut, J. Waller, Lieut, J. Hunt, Dr. J. S. Carslaw and W. R. Brotherhood, R.A.F. A series of bilzzards were experienced but the party reached a height estimated as 24,500 feet. There is no great difficulty between this point and the summit.

In the Autumn of 1935 the summit of Kabru par scrached by Mr. C. R. Cooke who was accompanied to the foot of the final rocks by Mr. G. Schoberth who was forced to give up owing to a high altitude, cough and the risk of frostbite. This ascent was made on November 18th, an unusually late date and is of great interest as proving that high Himalayan peaks can be elimbed in early winter at least.

The 1936 French expedition to the Karakorams, like the Everest expedition, encountered very bad weather and accomplished little.

After Nanda Devithe most remarkable ascent of 1936 was that of SINOLOHU, a peak once designated as the "embodiment of inaccessibility", in the Kanchenjunga range. This was made by a small German party under the leadership of Herr Paul Bauer. Siniolchu is one of the most beautiful peaks in the Himalayas,

Other ascents in Sikkim were made by Mr. Marco Pallis's party who attempted Simvu unsuccessfully and by Mr. C. R. Cooke and Mr. F. Spencer Chapman who ascended several peaks of over 20,000 feet including the Fluted Peak.

A further German attempt to climb Nanga Parbat was made in 1938 under the leadership of Dr. Paul Bauer. During the second half of July the party succeeding in reaching a height of over 23,000 ft, but were forced to retreat by bad weather. During the climb the bodies of Herr Willy Merkl and the porter Gay Lay, who perished in 1934 were discovered.

During the summer of 1937 a number of peaks were climbed, the most notable being Chomolhari 23.997 ft. by Mr. F. Spencer Chapman with one porter, and the Mana Peak 23.860 ft. by Captain P. R. Oliver and Mr. F. S. Smythe, Mr. Smythe completing the ascent alone as Capt. Oliver was insufficiently acclimatised. Three other peaks of 21.400 ft., 21,500 ft. and 22,481 ft. were also climbed by Messrs. Oliver and Smythe and attempts made on Nilkanta and Dunagiri which were frustrated by bad weather. They also explored a remarkable plateau above the Banke Glacier, discovered in May 1937 by Lieut. E. A. Gardiner of the Survey of India. In addition, Mr. Smythe with three Tibetan porters climbed seven peaks of the Zaskar Range among them the very

difficult peak of Nilgiri Parlat, 21,264 ft. During this expedition Mr. Smythe came upon some remarkable tracks in the snow which the Tibetan porters believed were made by a Mirka or Abominable Snow Mm. These tracks were afterwards identified as bear tracks by the Natural History authorities in London. It is believed that there is now enough evidence to explain this strange legend of the Himalayas.

In 1938 Mr. C. S. Houston led an expedition to the Karakoram during the course of which a bold and determined attempt was made to climb K2, 28,150 ft. After failure to obtain a footing on the N. W. ridge, the party, which included several veteran Sherpa porters, ascended the N. E. ridge to a height of 26,000 ft.

Another expedition to the Karakorams was that undertaken by Capt, J. B. Harrison, Lieut, J. O. M. Roberts, Mr. R. A. Hodgkin, Dr. T. Graham Brown and Lieut, J. Waller together with Dr. G. A. J. Peasdale and Dr. Elizabeth Peasdale. The principal objective was Masherbrum, 25,600 ft. After establishing Camp 7 at 24,600 ft. Harrison and Hodgkin reached a height of about 25,000 ft. Letore being forced to retreat by bad weather. In descending to Camp 6 they were overtaken by a blizzard and forced to spend a night in the open as the result of which they were seriously frostbitten. The devotion of the Sherpa porters prevented a more serious disaster.

Further exploration of the Badrinath-Kedarnath ranges at the sources of the Ganges as well as various ascents was made by a German expedition under the leadership of Dr. R. Schwarzgruber in the autumn of 1938.

The Survey of India are now very active and much work has been accomplished during the re-survey of Garhwal and Kunnon under the direction of Major Gordon Osmaston, whilst several thousand square miles of country have been mapped by Messra. Shipton and Tilman during their expedition to the Shaksgam.

The Himalayan Club.—Was founded on 17th February 1928, at New Dehl with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the late Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E.. Assistant Surveyor-General. Its membership is over 350, including three lady members and its president is Sir Harry Haig, Governor of the United Provinces. Mr. J. S. H. Shattock is Hon, Secretary.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced att he Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province-the seat of the Bengal Government-for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible Capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi. on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn.-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing otty. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1918. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisian hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Raker

for the Secretariats. The former building is estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-cast towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Paharguni, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat bulldings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,552, or a total of 412,821. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Rulling Princes and Chiefs to build houses for their own occupation during their visits to the new etty, and several of these habitations have been erected.

There was, as regards architecture, a prolonged "battle of the styles" over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

ment House, and two large blacks of Secretariats.

This Government centre has been given a tively estimated that the cost of the new capital position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect was given in the original despatch of the Government House and Sir Edward Baker ernment of India on the subject. Various

afterwards increased the amount. | special consideration to the question whether the chief of these being the humenso rise in prices after the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1928, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1929 was Rs. 14 erores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which re-coveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured. The project, after being completed and closed. was re-opened in 1933-34. This became necessary owing to the need to Increase residential accommodation for officers and staff and facilitated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting members of the Indian Legislature. The population of the new City is now about 80,000. Practically all the building sites within it (except in a small area where shortcomings in drainage are a handicap) are taken up and the time for extending the layout has almost arrived.

Progress of the work .- The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from ced that there were transferred to them from Calcutts in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from Old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new Secretariats, of which the builders have already had to carry-out the first section of the extension out the first section of the extension provided for in the architects' plans. The Members of H. E. the Viceroy's Executive Council including H. E. the Commander-inchief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted

their ordinary annual 5 months residence in Delhi should be extended each year to 7 month and early in 1928 decided in consultation with the India Office to endeavour to stay in Delh for half of each year, the new order being intro duced for trial in 1928 by keeping the Secretarial in New Delhitill mid-April and bringing it dowr Simla from again in mid-October. The experiment was not very successful and was not repeated till 1932-33, when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. An early descent from Simla was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October, But various factors, including especially the increase in personnel in the Secretariat and consequential congestion of office and residential accommodation in Simla are making the extensions. sion of the Delhi season unavoidable. The prospective enlargement of the Indian Legislature, with the arrival of Federation, strengthens the same tendency. The provision of considerable further housing accommodation both for offices and residential has become imperative, The only question is whether this should be undertaken both in Delhi and in Simla or in undertaken both in Delni and in simila of in Delni only. Pressed by sharp financial stringency, arising partly out of the emergency created by the institution of the Constitutional Reforms, the Government of India appear decisively moving in the direction of making Delni an all-the-year-round Capital. Certain Departments are already nor least to Validate Control of Capital Departments are already now kept in Delhi throughout the year. Others are under orders to remain. The office personnel of others are for the first time being kept in Delhi throughout the year in 1938. The Government of India in January, 1938, announced that further retentions in Delhi throughout the year are under their consideration.

There was in recent years an increase in malarla bearing mosquitoes and consequential fever in New Delhi. This led to a special inquiry in 1936. The inquiry showed that both Old and New Delhi were ringed about with prolific mosquito breeding places, one of the worst being the area utilized for sewage outfall. The water borne sewage of both Old and New cities is dealt with in a farm which, when the new city was built, was placed immediately outside lts southern boundary. The Government of India after the 1926 inquiry were forced to adopt a new scheme for the removal of the farm to a more distant site and chose one some four miles further away from the city. Anti-malaria operations on a large scale, scientifically directed. were simultaneously undertaken, the estimate of their cost being Rs. 14 lakhs. Improvements in the water supply of the new Capital with a view to a larger population being retained in it during the summer has also been effected.

When the residential buildings in New Delhi were, in the course of the original construction of the new city, about to be designed, the Government of India issued orders that they were to be "for cold weather occupation only." Government of India in 1927 devoted This rule was followed. The general principle

embodied in the design of the houses was that sidered in a broader light and in consultation of planning them to capture as much warmth from the sun as possible. Secretariats, residential bungalows and staff quarters are largely inappropriate for hot weather occupation. How Government will deal with this problem remains to be seen.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facili-ties for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and cellings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process in situ. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religlous ones and Engish artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work was continually progressing until the

Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931, in the presence of representatives of every unit of the army in India, of the Royal Air Force and of a large concourse of official and other spectators.

George V Memorial.—It was decided in 1938 to erect a memorial statue to His Late Majesty, King Emperor George V, in Princes' place, the large park-like area lying between the All-ludfa War Memorial and the Parence Oils. The action of the large park-like area. Purana Qila. The origin of this proposal was a movement started among the Ruling Princes, sometime previously, to erect a white memorial statue to His Majesty in the new city and this

between Their Highnesses and His Excellency the Earl of Willingdon. The Princes agreed to merge their scheme in a larger one for an All-India memorial to His Late Majesty. H. E. the Viceroy issued an appeal for subscriptions to the major scheme and he and Her Excellency the Countess of Willingdon opened the general subscription list with a donation of Rs. 5,000. Sir Edwin Lutyens was invited to submit a design for a memorial and His Excellency the Vicerov and the representatives of the Ruling Princes inspected Princes' place with a view to a statue being erected there and in particular had a temporary wooden structure erected so that they might judge how a statue of the same dimensions would appear from different viewpoints. The statue of His Late Majesty is to be in bronze and will show His Majesty seated under a lofty canopy.

Public Institutions.--It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still "under considerapressured. The proposed state of the first tion." To implement it would require an estimated capital outlay of Rs. 12‡ lakhs.

The Government of India further in the Spring session of their Legislature in 1922.

introduced and carried a Bill for the establishuent of a unitary, teaching and residential University of Delhi, the buildings for which would be creeted in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university being a matter of time it was decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Exe-cutive Council. Unfortunately the inability of the Government of India to allot considerable world-wide depression in recent years dried up funds.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, light the foundation stone of the university buildings in November, 1922, but this proved impracticable. The general question of the University that the Connaught on 10th February, 1921, light the foundation stone of an All-India War. Duke of Connaught on 19th February, 1921, Impracticable. The general question of the laid the foundation stone of an All-India War inances of the University was in 1927 the Memorial at the southern end of the Central subject of Inquiry by a special Committee vista. The place chosen is a fine position in the centre of the circular Princes' Park and the tentre of the Circular Princes' Park and the University was housed in the temporary construction of the building was for conomy's buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 the old Viceregal Lodge was allocated to it for its future home.

H. H. the Maharaja of Bhavnagar having offered Rs. 5,00,000 for the provision of some amenity in the new city, the Government of India decided to utilize the sum for the provision of a Stadium. The ground which they took for this was a large area lying immediately below the western walls of the Purana Oila, i.e., be-tween them and Princes' place. This area was originally marked by Sir Edward Lutyens, in his plan, to be an ornamental lake, Practical consideration led to its abandonment for that purpose and the area was laid out as a park. scheme had made considerable progress when Alarge proportion of the Maharaja's Rs. 5,00,000 His Majesty died. The matter was then con- was utilized for the provision of a huge brick

grandstand overlooking the central portion of the park taken for the Stadium.

city Inaugural Ceremony.-The new was the scene of notable and elaborate inauguration ceremonies in February, 1931, The first of these was the unveiling of four "Dominion Columns" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose.

City Extension: - The main direction for the future extension of the new city is southward. where for some three miles beyond the limits of

present development, Government have land in their possession and have placed it at the disposal of the City administration. The New Delhi Civil Aerodrome lies immediately southward of the existing new City boundary on the southern side and H. E. the Earl of Willingdon in February 1936, opened alongside the high road there a fine new Willingdon Air Station, which is furnished with the most modern equipment for day and night flying. Building has already taken place in the same neighbourhood. The scene of the next town-planning seems likely to be in the area lying between the new city and New Delhi Cantonment.

A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

A development Trust was instituted in 1937, its duties being to provide for the expansion of the new capital, including both old and new cities and urgently to deal with the insanitary overcrowding of the old city, a problem arising from the rapid increase of population there since Delhi again became capital of India.

Freemasonry in India.

In 1728 a dispensation was granted by the previously a kind of roving commission was grant-Grand Lodge of England to Geo. Pomfret, Esq., ed by Earl Ferrars in 1762-64 to John Bluvitt, authorising him to "open a now Lodge in Bengal." (Commander of the "Admiral Watson," Indiaman Of his personage nothing further is known but "for East India where no other Provincial Lodge under Capt. Farwinter, who in the following year is to be found." Middleton's election was consucceeded him as Provincial Grand Master of firmed October 31st, 1768, and, as the dispensation

William Mackett, Provincial Grand Master of District Grand Lodge.

Calcutta, was present at the meeting of that body, November 17, 1760, and we learn on the same authority that at the request of the "Lodge in the East Indies" Mr. Cullin Smith was apthe custom in Bengal "to elect the Provincial pointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial pointed P. G. M. for Madras and its Dependencies Grand Master annually by the majority of the votes of the members present, from amongst established at Fort St. George. In 1768 those who passed through the different offices of Athol (or Ancients) invaded this District and in the (Prov.) Grand Lodge and who had served as 1782 established a Provincial Grand Lodge and Dep. Prov. Grand Master," This annual election both these Provincial Grand Bodies continued as soon as notified to the Grand Lodge of England working peaceably side by side until the Union. was confirmed by the Grand Master without its Indeed, though not generally known, these two

India, a Lodge was established in 1730, which in forwarded by the Grand Secretary was looked the Engraved Lists is distinguished by the arms upon as abrogating the practice of annual elections. The East India Company, and is described the second results and in the East Indies." The Unfortunately the records of the P. G. L. date the Provincial Grand Masters were James back only to 1774, and thus much valuable in-Dawson and Zech, Gee, who held office in 1740; formation is lost to us. This Grand Lodge after whom came the Hon. Roger Drake, appoint-continued working until 1792 when it ceased to ed 10th April 1755. The last named was Governor meet. It seems that the officers were selected of Calcutta at the time of the attack made on the from only two Lodges much to the dissatisfaction settlement by Surajah Dowlah in 1756. Drake of the other Lodges, and resulted in most of the missed the horrors of the Black Hole by escaping dissatisfied bodies seceding and attaching themmissed the horrors of the Black Hole by escaping dissatished bodies seceding and attaching them and was accused of descriting his post, but, selves to the Athol or Ancient Grand Lodge. In though present at the retaking of Calcutta by last the Union both the Ancients and Moderns Admiral Waston and Clive, it is improbable in Calcutta combined and gave their allegtance that he resumed the duties of his masonic office to the United Grand Lodge of England and after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us the William Mackett, Provincial Grand Master of Calcutta combined and gave their allegtance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

being thought an infringement of his prerogative. Grand Bodies made an attempt at coalition long In accordance with this practice, Samuel Middleton before any such movement was made by their was elected (P. G. M. circa) in 1767; but in passparent bodies, the Grand Lodge of England, and ing it may be briefly observed that a few years the Ancient Grand Lodge, and Maiden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave thoir allogiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab oi Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1758 and 560 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Decean." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orlon-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orlon" seceded and formed the "Lodge of Hope" also at Poona No, 802.

Hare "Orion" unrecognized at home, aided in the secession of some of its members, who lobtained a warrant, on the recommendation of the Parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages what been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 318 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in

Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burner, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Per-severance" under England went over bodily to Scotland, with its name, jewels furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 549 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burnes established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umra has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic or Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of England and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first, the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

The Grand Lodge of Scotland exercises its rule through a Grand Master of All Scotlish Freemasoury in India, who is nominated by the Lodges under the jurisdiction subject to confirmation by the Grand Lodge of Scotland. The Hon'ble Mr. Justice Cecil Patrick Blackwell, Kt., M.B.E. the present incumbent of the office, and controls 71 Lodges. Under him the several districts are in charge of the following Grand Superintendent:—

Major A. G. Campbell, G. Supdt. Northern India. N. Iredale, G. Supdt., Central India. Morley Williams, Supdt., Southern India.

A. C. Muirden, G. Supdt., Eastern India.

1. H. Taunton, 1.C.S., G. Supdt., Sind.

The Grand Secretary is R.W. Bro. Khan Bahadur J. C. Mistree, J. P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third magonic jurisdiction in the Provinces

Patrick" and since that year three other Lodgehave sprung into being, one of which is now defunct.

The Irish Constitution is governed in India by a Grand Inspector for India who is Rt. Wor. Bro. Mr. Justice Munroe of the Lahore High Court. He has two Asst. Grand Inspectors. one for the Bombay Presidency, who is Wor. Bro. A. Finan, and one for Bengal who is Wor. Bro. E. C. Rees,

Eleven Lodges are working in India at the following places:

Bombay.

Nos. 319, 419, 648,

Calcutta.

Nos. 263, 382, 464, 465, 490 and 567,

Lahore.

No. 19.

Simla.

No. 458.

Masonry .- Under England Royal Arch the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under :-

Bengal.

30 Chapters, Grand Supdt, Most Ex. Comp. C. Carey Morgan.

Madras.

20 Chapters, Grand Supdt, Most Excellent Comp. G. T. Boag, C.S.I., C.I.E., I.C.S.

Bombay.

27 Chapters, M. Ex. Comp. W. A. C. Bromham, Grand Superintendent.

Punjab.

Burma.

7 Chapters. Most Ex. Comp. W. H. Chance, V.D., Grand Superintendent.

Royal Arch Masonry under Scotland has a soparate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. Sir Shapoorjee B. Billimoria, Kt., M.B.E., J.P., under whom there are 32 Chapters in India. The Grand Secretary of All Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

there being two already, ptz., English and Scottish the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was canctioned for the establishment of Lodge "St. Patrick" and since that year three other Lodge. Master.

Bengal.

23 Lodges. Rt. W. Bro. C. Carey Morgan, District Grand Master.

Bombau.

Lodges, Rt. W. Bro. W. A. C. Bromham. P.G.D., District Grand Master.

Madras.

16 Lodges. Rt. Wor. Bro. George Townsend Roag, C.S.I., C.I.E., I.C.S., District Grand Master.

Punjab.

12 Lodges. Rt. W. Bro. Rt. Rev. The Lord
Bishop of Lahore, C.I.E., O.B.E., V.D.,
M.A., D.D., District Grand Master.

Burma. 5 Lodges. Rt. W. Bro. W. H. Chance, V.D., District Grand Master.

The Mark degree is incorporated with the Royal Arch degree in Irish Chapters. The Mark iegree is worked in some S. C. Lodges, but essentially in R. A. Chapters, in which the Excellent, R.A.M. and other degrees can be obtained. 8. C. Chapters insist upon candidates being Mark Master Masons before exaitation. The Mark degree in Scottish Craft Lodges is conferred by the Rt. Wor. Master as the S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Loige of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Royal Ark Mariner.—The Royal Ark Mariner degree is worked in the English Constitution by lodges attached to Mark lodges. Its ruler is the District Grand Mark Master and only Mark master Masons can take this degree.

There are 10 R. A. M. Lodges under Bengal, 5 under Bombay, 4 under Madras and 4 under Punjab.

Other Degrees .- There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 80° is worked. The Knight Templar Degree is also worked in several places under both English Chapters. Most Ex. Comp. Rt. Rev. Lord Bishop of Lahore, C.I.E., O.B.E., V.D., M.A., D.D., Grand Superintendent.

The Red Cross of Constantine has two Conclaves working in India. With them are worked the degrees of K.H.S. and Kt. of St. John. They are governed by the Grand Council in England direct.

The Conclaves working in India are :-No. 48 Bombay and No. 160, Simla.

The Order of the Secret Monitor has 7 conleaves under Bombay and 7 under Madras. Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each The names and addresses of District Grand Secretaries are given below :-

D. G. S., Bengal.

Guy D. Robinson, P. D. G. W., (Bombay). 19, Park Street, Calcutta.

D. G. S., Bornbay.

Khan Bahadur Palanji N. Davar, P.A.G.R., P.D.G.W, Freemasons' Hall, Ravelin Street, Fort, Bombay.

D. G. S., Burma, E.C.

E. Meyer, P. G. Deacon, (Eng.)., Rangoon.

D. G. S., Madras. Rao Bahadur S. T. Srinivasa Gopala Charl, P. A. G. Reg. Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, P.A.G.D. of C., Freemasons, Hall, Lahore.

Scottish Constitution.—It has two Benevolent Funds known as, (1) Scottish Masonic Fund of Benevolence (India), and (2) Scottish Masonic Benevolent Association in India. For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangeer C. Mistree, J.P., 17, Murzban Road, Bombay.

Asst. G. Architect.

Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised soological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent) of the Indian Museum has been a zoologist. and among the officers who have held the appointment have been such well-known members as Anderson, Wood-Mason, Alcock and Annandale.

The Survey is unique in that all its officers are Indians. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely The Records and The Memoirs of the Indian Museum and an Anthropological work entitled "Anthropological Bulletins from the Zoological Survey of India."

Superintendent of the Royal Betanic Garden, Calcutta. The Director having gone on leave preparatory to retirement the Department is awaiting some reorganisation. There is a staff caused in other countries where isolated topoat headquarters of one officer for systematic work and at the Indian Museum a curator rigid framework, with the inevitable result that who is engaged in the development and maintenance of the Industrial Section. The Director held administrative charge of the Government of India's cinchona operations in Burma, of quinine manufacture in Bengal and of the distribution of cinchons products to the Government of India's area of distribution in Upper India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical fact of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability-consisting as they do of investigations and researches into the systematics, physiology, ecology, and histology of plantlife—the work accomplished in pure botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India.

Survey of India.—The first authoritative map of India was published by D'Anville in 1762, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough chart of the coast.

The Survey of India may be said to have been founded in 1767-ten years after the battle of Plassey-when Lord Clive formally appointed. Major James Rennel the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department conists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This Botanical Survey.—The Botanical Survey whereby points fixed by triangulation can be department of the Government of India was accurately located on its curved surface. This under the control of a Director who was also system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has obviated the embarrassments they could not be fitted together.

> A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of those which are carried out in India:

> Precise levelling for the determination of heights:

> Tidal predictions and publication of Tide Tables for forty-one ports between Suez and Singapore.

The Magnetic survey ;

Observation of the direction and force of gravity:

Astronomical observations to latitude, longitude and time:

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed widespread anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was atill conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is unconcerned with the surface features, ground levels and exact geographical position essential to a copographical survey, it was on the whole found sconomical to carry out both surveys together.

By 1905 however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale as recommended by a commission which sat at that time to consider the existing maps of India.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffer requirements.

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years. Owing however to the war and more recent retrenchments only a little over two-thirds of the programme had been completed by 1937, in spite of the reduction of scale for the less important areas.

Although new surveys are carried out every year, covering from thirty to sixty thousand square miles—an area roughly that of England—the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shewn by roughly sketched form lines or hachures; such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but are entered from data gathered from outside sources.

Out of a total of 1,622,920 square miles, which is the Survey programme of India 1,140,073 square miles have now been mapped, and it is hoped that the remaining area will be done in about 14 years time.

While some of these unsurveyed places are in remote tracts like the Naga hills of Assam and the high Himalayas, most are accessible. Large areas in Central Burma, Eastern Bengal, North Bihar, South Bombay, Gujrat, Sind and Western Rajputana have yet to be mapped on modern lines.

The work is now being done by 8 parties distributed all over India, including the Himalayas, where one party operates from April to June till the rains start and again from September till such time as work is rendered impossible by cold. For the other parties the winter is their field season, the rains being devoted to drawing.

On the separation of Burma from India on lat April 1937, the Burma Survey Party, Survey of India, has been placed on foreign service conditions under the Government of Burma. Technical and administrative control is however still exercised by the Surveyor General of India. The activities of the Surveyor of India have gone beyond the borders of India in the past. Nepal, for instance, was surveyed and mapped at the request of the local authorities in 1927.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is inadequate.

Miscellaneous.—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys:

Riveraine, irrigation, railway and city surveys;

Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers lent, in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun are always at the disposal of other Government departments, and the public, for such work as the printing of special maps, illustration for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining up-to-date instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be replaced from abroad.

Military Requirements and Air Survey.—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air survey work for civil purposes is receiving all possible assistance, and continuous research is being carried on in the latest methods of mapping from photographs taken from the ground and in the air.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dum.

Administration is in the hands of the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the Map Publication and other technical offices at Calcutta, and three for three of the five Survey of Indie Circles into which the country is divided; the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Directors, one also administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps of publications may be addressed either to the Headquarters Office or to the Survey Director

or Independent Party concerned, whose addresses are Director, Map Publication, Calcutta; Director, Geodetic Branch, Dehra Dun; Director, Frontier Circle, Simla; Director, Eastern Circle, Shillong: Officer in charge, No. 6 (South India) Party, Bangalore; and Officer-in-Charge BurmaSurvey party, Survey of India, Maymyo.

Indian Science Congress.—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress. till 1921. The Asiatic Society of Bengal undertakes the management of the Congress fluances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific panionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and avening lectures open to the public form an important part of the proceedings of each Congress.

The Congress, which is progressive and vigorous, meets in January each year. The proceedings last for six days. The Head of the Local Govornment is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research; when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association.—This Association is an older body than the Medical Research Council in England, having been constituted in 1911 with a sum of rupees tive lakhs set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the ploneers in organised medical research on a large scale and has been referred to by other countries in complimentary language. Still better, it has been copied by several other nations.

2. The control and management of the Association are vested in a Governing Body, the President of which is the Member-in-charge of the Department of Education, Health and Lands of the Government of India. This body is assisted by a Scientific Advisory Board of which not less than three members have seats on the Governing Body. The Director-General, Indian Medical Service, is the Chairman of the Board and the Public Health Commissioner with the Government of India is the Honorary Secretary of the Board and the Governing Body. Member-

ship to the Association is open to non-officials. Every donor of Rs. 5,000 is entitled to become a permanent life member, while every subscriber of Rs. 100 per annum can be a temporary member.

- 3. The original Governing Body of the Association was, until 1929, composed exclusively of officials, but in that year the Raja of Parlakimedi, made a donation of Rs. 1,00,000 to the Association and was appointed a life member. In the same year the Government of India, after taking into consideration the question of liberalising the constitution of the Governing Body, decided to enlarge that Body by including three representatives of the Indian Legislature, two representatives of Medical Faculties of Universities incorporated by law in India and one eminent non-medical scientist be nominated by the Governor-General. As a result of further representations from the Universities and the Legislature, this Body was again enlarged in 1933 by the addition of a third representative of the Medical Faculties of Indian Universities, whilst it was decided that the non-medical scientist should in future be elected by the Indian Science Congress Association. The Recruitment and Appointments Board has been formed from amongst the members of the Governing Body of the Association to select and recommend Officers for appointment in the Medical Research Department and the All-India Institute of Hygiene and Public Health, Calcutta.
- 4. In order to ensure the closest co-operation between workers and to prevent overlapping of ciforts, an annual conference of medical research workers and administrative heads of Medical and Public Health Departments is convened under the auspices of the Association. At this conference free discussions are held on the work accomplished and on proposals for future work. The results of the discussions are available to guide the members of the Scientific Advisory Board in making their recommendations for the programme for the following year. The Conference and the Advisory Board generally meet annually in November/December, when they examine all proposals for research work and recommend a programme of research for the guidance of the Governing Body of the Association.
- 5. The results of researches carried out under the auspices of the Association are published in the "Indian Journal of Medical Research" and its "Memoirs" and the "Records of the Malaria Survey of India," all of which are issued under the authority of the Association and have now a firmly established position in the scientific world. These publications are obtainable from Messrs. Thacker Spink & Co., 3, Esplanade East, Calcutta, on payment.
- 6. Since its inception a great number of enquiries have been carried out and from small beginnings great expansion of its activities has taken place. Enquiries which have been or are under investigation include investigations on Cholera, Bacteriophage, Malaria, Nutrition, Leprosy, Plague, Vaccines, Tuberculosis, Indigenous drugs, Maternal Mortality, Heiminthelogy, Medical Mycology, Dracontiasis and Filariasis, Protozoal Parasites, Cancer, Epidemic Dropsy, Kala-azar, Blood culture.

Besides financing investigations which are to take up the exploitation of the minerals conducted by workers in its direct employment, discovered. Collections of minerals, rocks and international recognition. As part of the activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January, 1927, and is known as the "Ross Field Experimental Station for Malaria." Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied.

7. In the early years an annual Government grant of Rs. 5.00,000 enabled the Association to finance enquiries and to build up a reserve.

Geological Survey.—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological prob-lems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are investigated and the results are published without delay and every endeavour is made to induce private firms The Survey headquarters are in Calcutta.

the Association gives grants-in-aid to outside for the last few years has an exhibited in the institutions and also to outside workers. The total expenditure for the last few years has in Calcutta. Some of the most interesting and amounted to between seven and eight lakhs scientifically valuable additions to the collections of rupees per annum. The Association supports in recent years have been the remains of anthe Maleria Survey of India, which now enjoys through the proposed at the different places in the Singell Programment of the different places in the Singell Programment. thropoid apes of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel the Himalayas, at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral, rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineering problems connected with the selection of sites for dams for reservoirs, the safety of hill slopes and foundations and the suitability of particular building stones for particular purposes. The Department is also often able to advise on problems concerned with the supply of water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the mineral resources of the country. The investigation of curthquakes in India and of all meteorites which fall in India are part of the duties of the Department. The Geological Survey also undertakes the examination and identification, without fee, of any minerals, rocks and fossils sent in by private observers.

The publications of the Survey include the
Memoirs, Records and Palæontologia Indica.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be distinct the property left by the deceased has to be distinct to be always as the present a schedule. The particulars of all these items is the property as the present a schedule. It is

Eage enoumbrances.

Property held by the deceased in trust and not beneficially or with general power to

The particulars of all these items have to be closed in a schedule to be annexed to the peti-tion. The values of immovable properties are tice of the High Court to send a copy of these usually assessed at 161 years purchase on schedules to the Revenue authorities and if the nett Municipal assessment. For estate the properties particularly immovable prothe nett Municipal assessment. For estate our properties parameter parameters and under Rs. 1,000 no probate duty is payable; perties have not been properly valued, the up to Rs. 9,000 in excess of first Rs. 1,000 the Revenue department require the petition to duty is at 2% between Rs. 10,000 and be amended accordingly. In certain cases up to its. 1,000 m excess or mrs. its. 1,000 the itevenue department require the petition to duty is at 2%, between Rs. 10,000 and be amended accordingly. In certain case Rs. 50,000 the duty payable is at 3% and the Court then requires citations to be publicated at 4% and over Rs. 1,00,000 the duty pay-lished and served on such persons as the Court able is at 4% and over Rs. 1,00,000 the duty thinks are interested in the question of the payable is @ 5%. In determining the amount of grant of probate. If no objection is lodged by is ordered to be granted.

Earthquakes.

divided geologically and physiotherefore graphically into three distinct and well-defined units. The northernmost unit consisting of sedimentary and crystallino rocks comprises the great mountain ranges of the Himalayas that were upraised, geologically speaking, in comparatively recent times, and are believed to be still undergoing elevation. They constitute India's most unstable region and are therefore the seat of the most violent earthquakes. The northsouth running mountains of Burma are components of the same mountain system, the Andaman and Nicobar Islands being their south-ern continuation, and Burma likewise pays the same penalty for their instability.

The southward push of these mountains caused a sinking of the Himalayan foreland—the region of the Indo-Gangetic basin, now filled with alluvium. This constitutes the second unit, and on account of its proximity to the restless mountains in the north, it shares, though in a lesser degree, the effects of the Himalayan earthquakes, But it also makes its own independent contribution of such catastrophies, as we know from our recent experience of the Bihar earthquake (January 1984).

The triangular portion of the Peninsula proper constitutes a stable landmass—a Horst—as the geologists call it—and is the third and most stable region in India, being comparatively free from severe earthquakes. Only one earthquake which did any considerable damage has been recorded from this region (April 1843). From the apex of the Peninsula to Madras, however, runs a region of minor shocks, probably connected with some dislocation in the earth's crust, though there is no direct evidence of this. These three units, then, constitute regions of decreasing intensity of earthquakes as we travel from north to south. They are indicated on the accompanying map, which is essentially the same as the one prepared by Mr. W. D. West of the Geological Survey of India.

Causes .- It will be unnecessary to go into the origin of the individual earthquakes, but a few remarks on the main causes of these phenomena will be illuminating. While minor earthquakes may be due to volcanic activity, the major ones are almost invariably the result of movement along dislocations in the earth's crust or "faulte" as the geologists call them, and thrust planes. In the case of thrust planes certain sets of rocks override others, instead of being merely dislocated. The epicentre, that is the place of maximum intensity, frequently coincides with these faults or thrust planes, which proves that a close relationship exists between earthquakes and the dislocations. A number of important faults run close to the southern edge of the Himalayas and the Himalayan foot is therefore a very unstable region. A similar fault runs along the foot of the Shan Plateau in Burma while the Kyaukkyan fault runs north and south in the

Physical divisions of India and their relation the Peninsular area appear to be inert and there-Earthquakes.—The Indian continent is fore few earthquakes occur there. Although the fore few earthquakes occur there. Although the immediate cause of the shocks may be movement along a fault or faults, the ultimate cause is often the rapid denudation of steep ranges, which upsets the equilibrium of the earth (Kangra, 1905) in the readjustment of which these movements occur. There is, however, no consensus of opinion on this point for in Norway, where the steep mountain ranges are subject to rapid denudation, there are no earthquakes. The cause may be more deep-scated as, for example, differential cooling and contraction of the earth's interior. The same result is achieved by the slipping of large alluvial masses in deltaic areas or their uplift owing to tectonic forces (Rangoon, Dec. 1927). The regions where mountain ranges take sharp bends, being highly folded, are naturally areas of pent up strains seeking relief and are therefore zones of great danger. The violent Quetta carthquake of 1935 and the earlier ones of Mach and Sharigh (1931) were of this nature, for these places lie near sharp bends in the Suleiman, Bugti or Kirthar ranges.

> Frequently more than one cause contributes to these earthquakes and the results are then even more disastrous.

> Factors Controlling Damage and Loss of Life.—The intensity of the earthquake is not the only factor upon which the extent of damage and loss of life depends. Much depends upon the time of shock, the nature of the buildings, the habits of the people, etc. Thus the amount of damage done is often greater in India, where pucca houses are more common, than in Burma, where houses are mostly wooden. Though the latter may suffer more from fire, as happen-ed in the case of the Pegu earthquake (5th May, 1930).

> The time at which the earthquake occurs makes a considerable difference to loss of life, for an earthquake occurring at night takes people un-awares. (Kangra, 20,000 lives lost; Quetta, toil of life 25,000). Had the Bihar earthquake, in which 10,000 lives were lost, occurred at night the toll of life would have been unthinkable. Dr. A. M. Heron, Director, Geological Survey, makes certain observations in the case of the Baluchistan earthquake of 1909. He remarks that certain communities suffered more heavily than others because more of their number slept indoors and. being better off, lived in two storied houses, which naturally suffered more damage. The fact to be emphasised is that the loss of life, etc., does not entirely depend upon the severity of the shock, but upon the time of occurrence and various other factors.

Sources of Information.—Very little is known of the Indian earthquakes previous to the year 892 A.D. and accounts of the earlier of the recorded earthquakes are necessarily incomplete. T. Oldham has recorded the different sources of information of the earlier Indian Newthern Shan States, and has probably given earthquakes in his catalogue. Among the works rise to earthquakes. It may however be pointed in which records of Indian earthquakes later than out that it its only 'faults' that are still active [892 A.D. occur are the Tarkhul Khulafie (History that give rise to earthquakes. Thus the faults in of the Caliphs), the Alkamil-fi-1 Tarkh by

Ibnulathir-a historical work of the Arabians, the Mir-at-ul-'Alam, an unpublished work in the library of the Royal Asiatic Society of Bengal, Baddon (Bibliotheca Indica), Raber's memoirs, Khafi Khans Muntakhab ullabab, etc. Much in-formation is gleaned from the Journals of the Royal Asiatic Society of Bengal, the Philosophical Transactions, etc. Accounts of the later earthquakes appear in detail in the records and memoirs of the Geological Survey of India, from which much of the information here given is drawn

Historical Review.—The chronological occurrence of the more important earthquakes may now be given.

The earliest earthquake authentically recorded in India took place about the close of the year 893 A.D. or early in 894 A.D., when Daibul or Daipul, an important town on the coast of the Indian Ocean was severely shaken and about 150,000 persons lost their lives. As noted by Oldham a record of this earthquake appears both in the Tarikhul Khulafa (History of the Caliphs) and in Alkamil-fi-l Tarith. According to him both these works mention the month of Shawwal (Hijra 280) as the date of occurrence. Since the month of Shawwal commenced 90 days before the 13th of March 894 A.D. that is the 14th December 893, the date of this earthquake is fixed by Oldham about the close of A.D. 893 or early 894 A.D.

6th July 1505 .- This earthquake affected Afghanistan and Northern India. It is recorded appeared in many that great fissures and there were extensive landslips causing much damage and loss of life. In one day as many as thirty-three shocks were felt and continued for a whole month. Oldham mentions that this earthquake is recorded in the Mir-di-ul-'Alam, an unpublished work in the library of the Royal Asiatic Society of Bengal, in Badáoni (Bibliotheca Indica Vol. I, p. 319) in the Memoirs of Babar (Erskines edition, p. 170) in Firishtah (Lucknow edition, p. 183) and its date is therefore authentically recorded.

The Province of Kashmir was shaken by an earthquake in 1552, but no details are available,

Several earthquakes of less intensity took place between the years 1618 and 1664. On the 26th of May, 1618, Bombay experienced an earthquake in which nearly two thousand lives were lost. The accompanying hurricane resulted in the destruction of several vessels. Lakhugar in Assam suffered an earthquake on the 7th February 1663. Shocks were felt in certain parts of eastern Bengal for a period of thirty-two days during the year 1668.

The next earthquake of great intensity which affected India occurred in 1668, between the dates 2nd—11th May. Its effect was so serious that Samaii or Samawani—a town of 30,000 inhabitants sank into the ground. A record of this appears in the Massiri'A'lamgiri, (Edit. Bibl. Indica, p. 74).

Following this terrible catastrophe there was a period of comparative quiescence of about 50 years. Upper India was however shaken by an One very severe shock followed by minor ones earthquake on the '14 Muharam of Aurangsibe occurred on 29th October 1826 and resulted 12th year' (Mir-4t-ul-'Alam, an unpublished work jin several houses falling in Khatmundu and of Bakhtiwar Khanjthat is, the 4th of June 1669. Patan, in Nepal.

This earthquake was accompanied by a big shower of meteors, which, it is reported, falling into a lake caused its waters to overflow!

Kashmir and Attock were affected by shocks on 22nd June 1669 and 28rd June 1669 respectively, but not much damage appears to have been done.

A severe caribquake shook Delhi on Friday, the 17th of July 1720, at about mid-day and was accompanied by considerable damage to the fortress. Fatchpur Mosque and other property, as well as loss of life. It is reported that comparatively severe shocks continued for more than a month, so much so that the population of Delhi had to sleep out of doors during this period!

A violent earthquake accompanied by a hurricane of great intensity occurred in Calcutta and the delta of the Ganges in October 1737. It is reported that 20,000 craft plying on the Ganges were cast away, the steeple of a church sank completely into the ground, and 300,000 people lost their lives. It is further reported that 60 ton barques were blown two leagues up the river!

Bongal, Burma and the Arakan coast were affected on 2nd April 1762. In fact it is reported that the emergence of the Arakan coast from the sea is due to this earthquake, but that is an obvious exaggeration, though partial elevation of the coastal strip probably occurred. It is stated that oysters were found attached to rocks forty feet above ground level. Near Chittagong 60 square miles of land sank permanently under water.

Several shocks of varying intensity occurred in different parts of India—Calcutta, Kashmir, Ongole and the upper reaches of the Ganges between 13th July 1762 and 22nd May 1803, but no details need be given as they were not of much importance.

A violent earthquake took place on 1st Sept. 1803, affecting Mathura, Calcutta, Garhwal, Kumaon and Delhi. At Mathura the domes of several mosques erected by Ghazi Khan sank into the ground. Several villages were ground. into the swallowed up in Garhwal.

This earthquake is noted for the fact that the upper portion of the famous Qutab Minar fell as a result of it, though it is stated that the Minar was also struck by lightning.

16th June 1819 .- This was one of the worst earthquakes experienced in India. Its effect was the severest in Cutch, the chief town of which— Bhool—was completely ruined and 2,000 persons perished. Ahmedabad, Broach, Surat and Poons were all affected.

In the western region of Cutch the town of Sindree and the neighbouring area was submerged as a resul tof tidal waves. A tract 15 miles wide was raised in front of a branch of the Indus and the river had to cut a fresh channel scross it. This ridge is known to the local inhabitants as Allah Band, or Gods Embankment.

1827 Sept. (before 26th Sept. 1827).—The fort of Kolltaran, near Lahore, was destroyed and about 1,000 persons lost their lives. It is stated that a hill falling into the river Ravi resulted in extensive floods.

6th June 1828 .- There is record of at least eighty earthquakes affecting the Indian region between the aforementioned 1839. but the year of these only two are worth noting, namely, the shook the vale of Kashmir on 6th one that June 1828 and the other that affected Nepal and the eastern and central region, Northern India, In Kashmir alone over a thousand persons lost their lives and for at least two months following the earthquake the number of shocks was as high as one to two hundred per day !

26th August 1838.—Feit in Khatmundu (Nepal) and North Bihar. In Khatmundu alone 100 houses were levelled to the ground and a similar fate overtook other places. There was continuous agitation for full 24 hours.

An earthquake of great intensity affected Burma more particularly Amarapura and Ava on 23rd March 1839. It is reported that shocks continued for four or five days, every fitteen to thirty minutes. 200—400 lives were lost and pagodas and other buildings in Ava, Amarapura and Sugaing suffered heavily.

19th February 1842.—Lasted for about three minutes in Kabul and affected Peshawar, Jallalabad, etc. It was very destructive at Peshawar and one-third of the town of Jallalabad was destroyed. Hot springs at Sonah became cold and the amount of water also diminished. The area affected was about 216,000 square miles. The epicentral area was probably near Jallalabad.

Numerous later earthquakes which occurred in different parts of the Indian region do not call for much attention as they were of minor importance. Two earthquakes which affected the Deccan in March and April 1843 may be here recorded, for the Deccan, being a stable landmass, is rarely affected by earthquakes of any intensity. Sholapur, Maktal, Singrurgarh, Bellary, Kurnool, Belgaum were all affected and much damage was done. This is the only earthquake known in the Deccan which caused considerable damage. The epicentre was near Bellary.

Severe shocks, local in their effect occurred in Upper Sind on 24th January 1852. Fort Kahan was completely ruined and about 350 persons were killed.

24th August 1858.—Burma was affected, but the shocks were not of great intensity. False Island situated south-east of Cheduba Island (18° 38' N: 93 55‡' E) disappeared entirely under the Ocean. The same earthquake affected the Punjab and Bengal, but very little damage was done.

10th January 1809.—Experienced in Assam (Cachar), total area where shocks were felt was 250,000 square miles.

A severe earthquake occurred in the Bay of due to the Bengal on the morning of 31st December 1881, being covere The radius of the area affected was about 800 conjectural.

miles, and the total area over which the shock was felt was in the neighbourhood of 2,000,000 square miles, most of it being sea. It was felt at Gaya, Hazaribagh, Akra, Ootacamund and Calient in India, and in Burma at Akyab where it was followed by the eruption of a mud volcano in Ramri. The northernmost point affected was near Monghyr.

30th May 1885.—This earthquake, although comparatively not so severe, resulted in heavy loss of life and about 3,000 persons perished in Kashmir. The epicentre was a few miles west of Srinagar. The radius of felt area was 300—450 miles, the total area affected being about 110,000 square miles.

14th July 1885.—The epicentre of this carthquake was north-west of Dacca. It was felt violently throughout Bengal, but extended also into Chota Nagpur, Bihar, Sikkim, Bhutan and Assam. The square area affected was approximately 230,400 square miles.

20th December 1892.—This was felt over the greater part of Baluchistan, and was connected with an old fault line that runs along the foot of the Kolak range in a N.N.E. direction. The foot of the range is marked by a depression and numerous springs which are indicative of the fault. It is interesting to note that as a result of this earthquake the area west of the fault subsided about one foot and moved southward about 2½ feet! The earthquake was however local in its effects.

The worse earthquake which has affected Assam and probably the greatest within historic times occurred on 12th June 1897. Stone buildings in Shillong, Goalpara, Gauhat, Nowgong and Sylhet were almost entirely destroyed everywhere and Calcutta was seriously affected. Over 1,600 lives were lost and the earthquake was felt in an area of 1,730,000 square miles. The earthquake was caused by a "movement along a thrust-plane or thrust planes, and along secondary thrust and fault-planes, which had a maximum length of about 200 miles and a maximum width of about 50 miles." This movement was due to the relief of differential strains set up in the interior of the earth.

The district of Kangra in the Punjab suffered heavily on 4th April 1905, more particularly because the shocks occurred early in the morning when people were still asleep. There was heavy loss of life—20,000 persons having perished. The area affected was 1,625,000 square miles. Kangra and Dharamsala were completely destroyed. The main shock was from north to south, followed by an equally severe one from south to north. The earthquake is ascribed to movement along one of the reverse faults of the Himalayas.

21.t October 1905.—This earthquake affected the Kachhi plain, Baluchistan. Considerable damage was done and over 200 lives were lost. The radius of the felt area was about 15—45 miles. The elongated epicentre was N.W.—S.E. in direction. The earthquake was presumably due to the presence of a fault, though, the area being covered with alluvium, this is more or less conjectural.

A violent earthquake occurred over the greater part of the Northern and Southern Shan States on 21st May 1912 and was felt practically over the whole of Burma, Siam and Yunnan. An area of 125,000 square miles was affected. Shocks continued the following day and were followed on the 23rd May by severe shock which was felt over an area of 375,000 square miles. Numerous after shocks continued in May, June, July and August, when they finally ceased. The epicentre was close to the great Kyaukkyan fault in the Northern Shan States.

No severe earthquake is recorded during the six years following the last earthquake in Burma, but a violent shock was felt on 8th July 1918. nd affected Eastern Bengal, Assam, Burma, Northwest India as far as Lahore. It was most strongly felt in Srimangal (Assam) where many tea-estates were ruined. The total area over which it was felt was 800,000 square miles. This carthquake was due to subsidence along a fault. It was accompanied by pouring out of sand, mud and water from fissures created in the ground.

17th December 1927.—Was experienced in Rangoon, but very little damage was done. Affecting as it did a big commercial city like Rangoon its importance cannot be denied. Investigation appears to show that the shock was due to "forces of uplift causing movement along lines of weakness below the deltaic alluvium." Although the area is covered with alluvium and direct observations are not possible, the probability of such a zone of weakness existing in the neighbourhood of the town must be accepted.

The areas around Rawalpindi, Peshawar and Attock are regarded as very unstable, as one big fault and numerous smaller ones are located in this region. The earthquake on 1st February 1929 in the North-West Himalayas was at first thought to be connected with these faults. But it has been shown that the focus of this carthquake lay at a considerable depth—160 Klms, which is a point of interest, for it shows that the shocks were not connected with any surface features such as faults. The epicentre was situated about 25 miles north-west of Abbottabad. Some damage was done to property and a few lives were lost.

Sth August 1929.—This carthquake, which affected the small town of Swa in Burma, was connected with several of the later carthquakes that occurred in different parts of Burma—the Pegu carthquake of 5th May 1930, the Podo carthquakes of July to December 1930 and the Pyu disaster of 4th December 1930. The epicentral area was quite small and lay about 6 miles to the north-west of Swa. Damage was done to railway lines and bridges. Loaded trucks were lifted off the track and thrown to one side. The shocks were due to movement along a fault in the Tertiary rocks, more or less parallel to the great fault which is known as the Boundary Fault.

A violent shock occurred at about 8-15 P.M. affected was about 100,000 square miles. The on 5th May 1030, and practically levelled the causes leading to these earthquakes are unknown, whole town of Pegu. About 550 lives were lost but the focus was probably shallow. The earthand considerable damage was done to property in quake is probably connected with the sharp bend Rangoon as well. The actual area affected was in the hill ranges near Quetta.

over the about 220,000 square miles. This earthquake southern was felt lasted only 30 seconds. The earlier Burmese Slam and are miles ably a foreunner of the present one and did not following May by a lit is thought that the movement was connected a area of with the boundary faults of the Shan Plateau, which was accentuated by the forward movement ust, when of terra firm inte the gulf of Martabau.

Assam was shaken by a severe earthquake on 3rd July 1930, after about 12 years of comparative quiescence. The total area affected was about 350,000 square miles. The town of Dhubri suffered considerable damage, but fortunately no loss of life occurred. This is probably due to the fact that many houses are built of "lexible superstructure supporting light, often galvanised iron roofs' and at that time of the year many persons were not sleeping inside their houses. The earthquake was probably due to weakness at the foot of the Assam range, movement along which zone was assisted by the rapid denudation of the mountains, which presumably upset the equilibrium.

3rd/4th December 1930.—Several severe shocks were felt between 10-15 P.M. and 1-22 A.M. in Pyu, Burma. Most of the brick buildings were destroyed and about 30 persons lost their lives. The shocks were felt over an area of approximately 220,000 square miles.

27th Ingust 1931.—This was one of the worst of the Baluchistan carthquakes, and about 200 lives were lost. It was preceded on the 25th by an earlier carthquake the epicentre of which was near Sharigh. The March earthquake was felt over an area of 370,000 square miles. Both these earthquakes were connected with the sharp bends of the Suleiman, Bugti and Kirthar hills for such bends are regions of strain where earth movements are likely to occur.

15th January 1934.—This, the North Bihar earthquake, is still fresh in our minds. It was one of the most violent earthquakes that have affected India. It is estimated that over 10,000 lives were lost and several crores worth of property was damaged. Sitarmaril, Madhubani, Monghyr, Patna, Jamalpur, Muzaffarpur, Darjeeling, etc., and the Nepal valley suffered heavily. The epicentre of this carthquake ran Sitarmarhi, Madhubani, Jamalpur, Muzaffarpur, from near Mothari through Sitamarhi to The total area over which it was Madhubani. felt was 1,900,000 square miles. The earthquake is attributed to faults underlying the alluvium. It is fortunate that it occurred in the afternoon (about 2-15 P.M.), for had it occurred at night it would have been one of the worst of such disasters experienced upon the earth.

slit May 1935.—The Quetta earthquake is one of the latest of the more violent catastrophies that have overtaken the Indian region. This can be estimated from the fact that 25,000 lives perished and damage to private property, Railway lines, etc., ran into several crores. The town of Quetta was practically destroyed and the area affected was about 100,000 square miles. The causes leading to these earthquakes are unknown, but the focus was probably shallow. The earthquake is probably connected with the sharp bend in the hill ranges near Quetta.

The frequency of aftershocks of the Quetta earthquake of May 1985, according to the Geological Survey of India, appears to be considerably diminished, but several sharp shocks were felt during the year in the Assam seismic area, including those of 16th January at about 18.45 hours and of 21st Merch at 21.45 hours, Indian standard time.

The last severe earthquake to be experienced in India occurred in the Hindu Kush on 14th November 1937. and was felt throughout the North-West Frontier Province, Kashmir, as well as largely over the Punjab, United Provinces, northern Sind and Baluchistan. Severe shocks were felt at Lahore, Rawalpindi, Peahawar, Kangra, Chitral and Drosh, and considerable damage was done. No loss of life was reported.

Although minor earthquakes have been reported from different parts of India later than November 1937, none of these has caused damage or loss of life. Details of some of these are given below.

5th January 1938.—Two shocks were felt at Drosh in the Chitral District, North-West Frontier Province. Another shock of the same intensity was felt on the 7th January, but there was no damage or loss of life.

14th April 1938.—An earthquake shock was felt at Monywa in the Lower Chindwin district, Burma, at 7.47 a.m. Cracks appeared in the walls of several buildings, but there was no loss of life.

3rd May 1938. Two shocks were felt at intervals of about five seconds at Shillong in Assam, at 10-21 p.m. The shocks lasted for about 40 seconds. There was very little damage to property and no loss of life.

16th August 1938. Shocks were experienced in the Upper Chindwin district, Burma, and were felt over a fairly wide area. The shocks, which lasted about 30 seconds seem to have been severe at Kalemyo. Pucca buildings and Pagodas tumbled down, but there was no loss of life. Smaller shocks were also felt at Mawlaik, Paungbyin, Mingin, Indaw, Kalewa, Homalin, Tabyin, etc.

7th February 1939.—Two shocks were felt at Drosh in Chitral at intervals of two seconds, but there was neither material damage nor loss of life.

Reports received by the Geological Survey of India from various parts of India and Burma show that 82 earthquake shocks were felt in 1937 in India. With the exception of the rather severe shock of 14th November, which originated in the Hindu Kush region and affected a considerable tract of north-west India, the rest were of slight intensity, unattended by any damage to buildings or persons.

Regionally the shocks were distributed as follows:--

Burma, 28; north-eastern India, including Sikkim, Nepal and Tibet, 31; north-western India, including Kashmir, Chitral and Baluchistan, 21; and Peninsular India, 2.

The epicentre of the shock of 14th November 1937 has been located in the Hindu Kush mountains, north-west of Drosh, in Chitral. This has been deduced from observers' reports and from seismographic records available from the Meteorological Observatories at Bombay, Agra, Calcutta and Kodsikanal. This shock was felt at such distant places as Kabul, Dehra-Dun, Simla, Multan, Dera Ismall Khan and Roorkea.

Posts and Telegraphs. POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Communications of the Government of India. For the efficient working of the Department there is a Finance Officer, Communications. There is also a Deputy Director-General, Finance, attached to the office of the Director-General of Posts and Telegraphs who assists the D. G. generally in examining matters containing financial implications. The superior staff of the Direction, in addition to the Director-General limself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services) and eight Assist, Deputy Directors-General.

For postal purposes, the Indian Empire is divided into eight circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Central, Madras, Punjab and North-West Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first seven is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle roughly the Central Provinces comprises the Central India and Rajputana Agencies. With effect from 1-4-1937 Burma Circle was separated from the Indian Posts and Telegraphs Administration, and it started its career under a separate administration under the new Government of Burma.

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of malis by railways, inland steamers, and air services. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General while in the Sind and Baluchistan Circle, the Director is assisted by an Assistant Director. The eight Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the everywhere and especially in towns b headquarters of each revenue district and other a number of cheap telegraph officers post offices in the same district are usually under the control of the Post Office.

subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required. one or more Assistant Postmasters are employ-The more important of the offices subordinate to the head office are designated suboffices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local subtreasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shop-keepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph officers working under the control of the Post Office.

The Inland Tariff (which is applicable to Aden, Nepal, Ceylon and Portuguese India except as indicated below) is as follows:—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid,
Letters.	Anna. Pies.	1	
Not exceeding one tola. And every additional tola Book and pullern packets. For the first two and a half tolas or fraction thereof. For every additional two and a half tolas, or fraction thereof, in excess of two and a half tolas.	1 0 0 6 0 8	Double the pre- paid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).

Postcards.

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable. There is no money order service to Nepal.

Telegraphic money order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to aden and Ceylon in respect of those countries) telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India. In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1 for the first 12 words and 2 annas for each additional word.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fecs.	Rs	. ռ.
Where the value insured does not exceed Rs. 100	0	3
Where the value insured exceeds Rs. 100 but does not exceed Rs. 150	0	4

Where the value insured exceeds Rs. 150 Rs. a. but does not exceed Rs. 200 . . . 0 5
For every additional Rs. 100 or fraction thereof over Rs. 200 and unto Rs. 1,000 0 2

For every additional Rs. 100 or fraction thereof over Rs. 1,000 0

As regards Aden, Ceylon and Portuguese India

see Foreign Tariff.

Acknowledgment fee.—For each registered

The Foreign Tariff (which is not applicable to Aden, to Ceylon, to Nepal or to Portuguese India except as indicated below), is as follows:—

Letters.

Anglo-Egyptian Sudan, Bechuanaland tectorate. Reitigh Solomon Islands Protectorate, Brunei. Canada, Common-wealth of Australia (comprising New South Wales, Queensland, South Aus-Victoria, tralia. Australia, Western Tasmania, Papua or British New Guinea and Norfolk Island), Egypt, Eire, Fiji Islands, Friendly or Tonga Islands, Gilbert and Ellice Islands Protectorate. Great Britain and Northern Northern Hongkong, Jonord, Kelantan, Ireland, Kenya, Malava (Straits Settlements including Labuan-British, and Federated Malay States of Negri Sembilan, Pahang, Perak, and Selangor), Marshall Islands (Nauru), foundland, Mandated Mauritius, New-Territories, New Zea-land and its dependencies, North Borneo. Nvasaland Protectorate, Palestine, Perlis, Rhodesia (Northern and Southern), Sarawak, Seychelles, Seychenes, West Africa, Tan-Trans-South ganyika, Trengganu, Uganda, Union of South Africa (including Besutoland and Swaziland), Western Samoa (Apia) and Zanzibar.

21 annas for every
half ounce or
fraction thereof.
(All letters are
carried by air.)

To Aden, Ceylon, Nepal and Portuguese India—Indian inland rates, To Burma—1; annas for the first tola and 1 anna for every additional tola or part thereof.

Parcels.

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below:

as mails to the British Post Office, any one direction.

the rates of postage applicable to such rarcels being as follows :-

> Via Over-Gibraltar, land.

For a parcel --Rs.a.p. Rs.a.p.

These parcels are delivered by the post office and the postage paid carries them to destination.

(ii) Parcels which exceed 11 lbs. but which do not exceed 50 lbs. (the maximum allowed) in weight are for-warded from India through the medium of the P. & O. S. N. Co., and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London: if addressed to any place beyond that radius, carrier's charges are levied from the addresses on delivery. Parcels thus forwarded through the P. & O. S. N. Co. cannot be insured during transit beyond India, but must, if they contain coin, etc., be insured during transit in India. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value payable system.

Limits of Weight.

Letters .- 4 lbs. 6 oz.

Printed Papers and Business Papers-To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Hong-kong, Malaya [the Straits Settlements, (including Labuan-British) and the Federated Malay States of Perak, Selangor, Negri-Sembilan and Pahang], Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate— 5 lbs.

To Aden or Ceylon-No limit.

To all other destinations-4 lbs. 6 os.

Samples—To Great Britain and Northern Ireland, and Ireland, Burma, Hong-kong, Malaya, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate-5 lbs.

To Aden or Ceylon-200 tolas.

To all other destinations-1 lb. 2 oz.

Parcels.-11 lbs. or 20 lbs.

Limits of Size.

(i) Parcels not exceeding 22 lbs. in weight and addressed to Great Britain and one direction. If in form of roll, 39 inches in Northern Ireland are forwarded length plus twice the diameter and 31 inches in

Printed Papers and Business Papers-To Aden and Ceyion—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter.

To all other destinations-35 inches in length, breadth and thickness taken together and 231 inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Note .- Printed papers sent open, i.e., without a cover or wrapper in the form of cards, whether folded or not, should not measure less than 4 inches in length and 24 inches in width.

Samples.—To Great Britain and Northern Ireland, and Ireland, Burma, Ceylon, Hong-kong, Malaya, the Union of South Africa, Rhodesia and the Bechuanaland Protestorate— 2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction,

To all other destinations-35 inches in length breadth and thickness taken together and 231 inches in any one direction. If in form of roll, dimensions in all cases are 39 inches in length plus, twice the diameter and 31 inches in any one drection.

Money Orders .- To countries on which money orders have to be drawn in rupee currency. the rates of commission are as follows :-

Rs. a. On any sum not exceeding Rs. 10 0 On any sum exceeding Rs. 10 but not в exceeding Rs. 25... 0 On any sum exceeding Rs. 25

for each complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas.

To countries on which money orders have to be drawn in sterling, the rates are as follows :---

									₩,,	a.
On	any sum	not	exce	edin	g	£1	• •		0	4
,,	,, (8 x 0ee	ding	£1 1	but	not	exce	edin	g	
								£2	0	7

D- -

,,	**	,,	£2	,,	,,	£3	0	1
**	,,		£3					
,,	,,	,,		**				
			€5				1	1

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.

Insurance fees (for registered letters and parcels only).

Registration fee.

or business papers and samples

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India— Insurance fees mentioned under "Inland Tariff "

For insurance of letters and parcels to Burma, British Somuliland, Mauritius, Seychelles, and parcels to Portuguese India.

Where the value insured does not Annas exceed Rs. 180 ... 41

For every additional Rs. 180 or fraction thereof

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries other than those mentioned above) to which insurance is available.

Where the value insured does not Annas exceed £ 12 41 For every additional £12 or fraction thereof

Acknowledgment fee .- 3 annas for each registered article. 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India.

Air Mails.—Letters, postcards and packets can be sent by air in the inland post as well as to certain foreign countries on payment of special Air Mail fees. Such letters can be registered. Insured articles cannot be sent by Air Mail except to Burma and Ceylon. The Inland Air fees are as follows :-

- .. 6 pies plus ordinary (i) For a postcard postage.
- (ii) For a letter and packet.. 1 anna for each tola or part thereof plus ordinary postage.

For Air fees to foreign countries, see Air Mail leaflet obtainable gratis from the Post Office or the Post and Telegraph Guide.

Magnitude of business in Post Office. At the close of 1937-38 there were 101,674 postal officials, 24,167 post offices, and 158,769 miles of mail lines. During the year, 1,190 million articles, including 40.3 million registered articles were posted; stamps worth Rs. 65.5 millions were sold for postal purposes: about 40 million money orders of the total value of Rs. 763 millions were issued, 747 thousands of Indian Postal Orders to the value of about 19 lakhs were sold; a sum of Rs. 171 millions was collected for tradesmen and others on V. P. articles; about 3 million insured articles valued at 813.3 millions of rupees were handled. Customs duty, aggregating over 7.4 million rupees was realised on parcels and letters from abroad; pensions amounting to about Rs. 18.9 millions were paid to Indian Military pensioners and nearly 15.000 lbs. of quinine were sold to the public. On the 31st March 1938, there were 3,786,000 Savings Bank accounts with a total balance of Rs. 774.9 millions and 96,000 Postal For each letter, post-card & packet of printed Life Insurance policies with an aggregate business papers and samples ... 3 annas assurance of Rs. 189 millions.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph Administration. It now forms part of the system in India was administered as a separate (dovernment of Burma which started its department by an officer designated Director-independent career on and from that date. General of Telegraphs who worked in subordina-tion to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental a nalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amaigamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering (including wireless) side of a Chief Engineer, Telegraphs, with one Deputy Chief Engineer and one Assistant Deputy Director-General. For traffic work there is a Deputy Director-General, with three Assistant Deputy Directors-General. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. These five Circles are divided into eighteen Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan Circle was formed with its headquarters at Karachi. This Circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification proved an unqualified success and was gradually extended to other Circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the Circles are now controlled by the Postmasters-General.

The audit work of the Telegraph Department is, like that of the Post Office, estrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Ausistant Accountants-General. Accountants-General.

With effect from 1-4-1937 Burne Circle was separated from the Indian Posts and Telegraphs

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Burma or Cevlon are classed as Inland telegrams. The tariff for Inland telegrams is as follows:-

For delivery in India. Private and State. Express, Ordinary, Rs. a. Rs. a. ., 1 2 Minimum charge Each additional word over 8., 0 2 0 1 For delivery in Burma. Private and State. Express. Ordinary. Rs. a. Rs. a. 1 2 Minimum charge Each additional word over 8 For delivery in For delivery in Ceylon. Lhasa (Tibet). Private and Private and State. State. Ex-Ordi-Ex-Ordipress. nary. press. nary. Rs. a. Rs. a. Rs. a. Rs. a. Minimum charge, 1 8 0 12 2 0 Each additional word over 12.. 0 2 The address is charged for. Additional charges. Minimum for reply-paid Minimum charge telegram for an ordinary telegram. Notification of delivery Minimum charge for an ordinary telegram. Multiple telegrams. each 100 words .. 4 annas. orless .. Collation One half of the charge for an ordinary telegram of same length. If both the offices of origin and destination are closed

For acceptance of an Express telegram { during the hours when an office is closed.

If only one of the offices is closed . If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office 1

Press telegrams.		elivery idia.	For delivery in Ceylon
	Ex- press. Rs. a.		Ex- press. Rs. a.
Minimum charge Each additional is words over 40 in respect of India, each additional four words over 32 in respect of Ceylon	5		0 2
The address is free.			

Greeting Telegrams.—Greetings and messages of congratulations may be sent by telegram at reduced rates on occasions of (1) Christmas and New Year (2) Diwali (3) Birthday (4) Id (5) Conferment of Title (6) Marriage (7) Examination (8) Bijoya (9) Journeys (10) Elections and (11) Acknowledgment for greetings.

The charges payable will be 6 annas or 12 annas for each such telegram according to class, Ordinary or Express, consisting of not more than 6 words as follows:—

- (a) 4 words in the addressee's name and address;
- (b) 1 word as senders name.
- (c) The message consisting of Stock Phrases will be counted as one word.

Each additional word over 4 words in items (a) or 1 word in (b) will be charged at 1 anna for Ordinary and 2 annas for Express. In the message itself no additional word will be allowed.

inland De Luxe Telegrams.—Senders of Greefing telegrams to or from offices in India may also use their own phraseology in such telegrams instead of using the Stock Phrases, on payment of 2 annas in addition to the charge appropriate to the class of message (Express or Ordinary).

This DE LUXE service is not applicable to telegrams for Burma.

The sender of a DE LUXE telegram should write before the address the special instruction = LX=which will not be charged for.

Foreign Tariff.—The charges for foreign Blair the charge is thirteen aimss per word telegrams vary with the countries to which they (ordinary) or sight annas per word (code) in ase addressed. The rates per word for telegrams nearly all cases.

Code telegrams are accepted at 3/5th of the ordinary rate. Code telegrams fo countries within the British Empire are accepted at 2/3rds of the ordinary rate. (Vide chuse 425, P. & T. Guide.)

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration, Reply Paid, etc.

Full lists published in Posts and Telegraphs Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India and transmitted six the coast stations at Bombay, Calcutta, Karachi, Madras or Port Blair the charge is thirteen annas per word (ordinary) or eight annas per word (oods) in nearly all cases. The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted to ships at sea through the coast stations mentioned in the preceding paragraph:—

Total charge per word. Ordinary. Code. Rs. a. Rs. a.

(1) All Government or Private

Radio-telegrams, excepting those mentioned
in (2) to (4) below ... 0 13 0 8

(2) Badio-telegrams to His Britannic Majesty's Ships of War or Ships of the

Royal Indian Navy .. 0 8 0 5
(3) Radio-telegrams to Spanish
pr Swedish ships .. 0 12 0 7½

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "E. P." followed by mention in Rupees and annas of the amount prepaid, s.g., R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign belegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are cransmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter Telegrams are Reply paid, Poste Restante, Telegraph restante and telegraph redirection under orders of the addressee.

Foreign De Luxe Telegrams.—Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same character. A supplementary charge of four annas per telegram in addition to the charge at the appropriate rate according to the class (i.e. Urgent, Ordinary, Deferred, DLT.,etc.) is charged for such telegrams.

Greeting Telegrams.—Telegrams conveying Ohristmas and New Year wishes are accepted from the 14th of December to the 6th of January inclusive at special reduced rates, subject to a minimum charge of 10 words per telegram. Growth of Telegraphs.—At the end of 1897-95 there were 50,805 miles of line and 155,088 miles of wire and cable, as compared with 101,068 miles of line including cable and 618,605 miles of wire including conductors that the second of the se

The increase in the number of paid telegrams dealt with is shown by the following figures:—

The outturn of the workshops during 1937-38 represented a total value of Rs. 18,69,000-

Wireless.—The total number of departmental whreless stations open at the end of 1937-38 was twenty-nine, viz., Ahmedabad (two stations), Allahabad (two stations), Bombay (two stations), Calcutta (three stations), Chittagong, Delhi (three stations), Gaya, Hyderabad, Jodhpur (two stations), Jutogh, Karachi (two stations), Lahore, Madras (3 stations), Nagpur, Crmara, Pasni, Peehawar, Port Blair, Sandheads (two pilot vessels), of which only Ormara, Pasni, Port Blair and Sandheads booked telegrams direct from the public.

Five of these stations were designated coast stations for communication with ships at sea and eleven worked as aeronautical stations in connection with regular air services.

The Duplex high-speed telegraph service and the wireless telephone service between Rangoon and Madras continued to work satisfactorily.

Telephones.—On the 31st March 1988 the number of telephone exchanges established by the Department was 440 with 25,075 straight line connections and 5,278 extension telephones. Of these exchanges, 264 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 28 with 46,787 telephones.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1938 was 12.505.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1937-38 was Rs. 43,82,000 and Rs. 17,07,80,000 respectively. The receipts for the year ended Bit March 1938 amounted to Rs. 11,49,90,000 and charges (including interest on capital outlay) of Rs. 10,92,04,000, the result being a met gain Rs. 57,26,000.

Public Health.

The history of the Public Health departments | England and Wales and one and a half times in India goes back for about sixty years. During effected in the sanitary condition of the towns, enected in the samitary condition of the towns, though much remains to be done; but the pro-gress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated: the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagmant pools; and the village tanks polluted, and used in-discriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developup as education progressed, education develop-ed, and funds were available. In a resolution issued in May 23, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (Gazetts of India, May 25, 1914) should be studied by all who wish to under-stand the attitude of the Government of India. towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 475 et seq.) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsi-ble to local control through Ministers. This condition continues under the Government of India Act of 1935.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he neath organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical edu-cation, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed."

India's birth rate in 1986 was more than twice mortality rate was nearly three times that of per cent, of the total subscribed by it.

that of Japan. "The information furnished for that period great improvements have been the great group of infectious diseases of world import, i.e., plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says an earlier Public Health Report) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for reason lies in the apathy of the people and the plague and cholera." The significance of these tenacity with which they cling to domestic facts must, adds the Commissioner, be obvious customs injurious to health. While the into the limit of the plains of India are on the whole is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets, scurvy and beri-bert; of the way in which maiaria, cholera, yellow fever, dengue, ankylos-tomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation," These observations are as true to-day as when they were made.

In June 1937 His Excellency the Vicercy, Lord Linlithgow, inaugurated the Central Advisory Board of Health. This body had existed prior to 1923, when it was abolished on the recommendation of the Inchcape Retrenchment Committee. It has now been reconstituted on up-to-date lines, after consultation with the provinces, in a manner which brings it into provinces, in a manner which brings it move conformity with the constitutional changes in the country. Its Chairman is the Member for Education, Health and Lands with the Govern-ment of India. Most of the provinces have nominated their Ministers in charge of Public Health as their representatives on the Board. The Public Health Commissioner with the Central Government is Secretary-Member and several expert officials and members of the Central Assembly are also nominated to the Board. The inaugural meeting was addressed by Lord Linlithgow, who declared that everywhere in India he discerned unmistakable signs of a growing consciousness of the value and significance of public health. His Excellency particularly drew attention to the conditions of urban housing and sanitation and the comments thereon of the Whitley Commission on Labour which reported in 1981.

On December 1, 1987, Her Excellency the Marchioness of Linlithgow inaugurated a nation-wide campaign against tuberculosis. The King wide campaign against tuberoulosis. The King and Queen gave practical expression to their sympathy by donating £1,000; the Viceroy and Lady Linlitingow gave Rs. 10,000, and by the ond of February 1989, the sum of Rs. 76,26,562 had been subscribed. The Fund was then closed and Her Excellency Lady Linlitingow issued a statement thanking subscribers and outside the company of the c lining the arrangements made for establishing Anti-Tuberculosis Associations throughout India that of England and Wales, her death rate was on a Central, Provincial and State basis. Each nearly twice that of England and Wales and one Provincial and State Association was to receive and a half times that of Japan, and her infantile from the Central Association its quota of 95

Mortality during 1936.

Chief Causes of Mortality.—There are three main classes of fatal diseases: specific fevers, diseases affecting the abdominal organs, and lung diseases, Intestinal and skin parasites, ulcers and other indications of scarvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1936:—

tistical health reports for all India are always inevitably submitted as belated owing to the number of provinces from which returns have to be collated.

The Public Health nost recently published report, which concerns the year 1936, shows the density of population per square mile throughout India to average in the finantile mortality 162 per 1,000 and the vital index 156. He points out that since disease may be as high as five to seven per cent. the 1931 census was taken, India has enjoyed and whilst many of the cases seem to be of a six years of comparatively uniform health relatively mild type, it cannot be doubted that conditions, by which is meant that no volent the presence of well over one million leprous epidemics have been experienced. The year cases scattered throughout the general populaepidemics have been experienced. The year cases s under review was, if anything, less unhealthy tion or than usual. This is evidenced by the facts that recorded births numbered 282,349 more than those of 1935 and total deaths were less by 202,980. Thus the estimated population for 1936 shows an increase of about 3,600,000 as compared with that of the previous year.

As regards the three important infectious diseases, the combined mortality from small-pox, plague and cholera decreased by 62,410. Deaths from cholera which unfortunately had steadily increased during the previous three years, showed a welcome fall amounting to as much as 57,442 which is 26 per cent, of the cholera mortality in 1935. The downward trend in plague mortality which has been in evidence for a period of years past happily continued during 1936, the total deaths for the year being 13,021, a fall of 19,070 or 59% of the figure for 1935. In contrast with these decreases, however, the mortality from small-pox increased by 14,102 or 16% of that for the previous year. heterogeneous group of deaths recorded under fevers' decreased by about 4 per cent, whilst small percentage increases were recorded in the "respiratory diseases" and "dysentery and diarrhoea" groups.

Large as these major epidemic figures are, it must be remembered that there are other diseases which cause much greater havoc, although that is perhaps of a less dramatic nature. The most important of these is of course malaria. It has been estimated that deaths from malaria during 1936 amounted to 1,567,084 or about 44 per cent. of the total recorded 'fevers' deaths. The problems presented by malaria in this country are perhaps the most difficult of the many public health problems demanding solution.

Tuberculosis is another disease whose incidence has increased rapidly during recent years and which is now causing a heavy mortality particularly in the urbanised and industrialised areas. For example, it has been estimated by tuberculosis workers in Bengal that, in that province, about 100,000 people die every year of this disease. On the assumption that for every death there are ten cases of the disease, Bengal alone has one million persons infected with tuberculosis. These are alarming figures, but they are only estimates and it is highly desirable that accurate information should be available. Now that the "King Emperor's Fund" for anti-tuberculosis work has been raised, there is a chance that the situation will be adequately met by co-operation between provincial Governments, local authorities and voluntary agencies. An India-wide campaign to stamp out the scourge of tuberculosis is urgently needed.

While leprosy may not be the cause in India of such heavy mortality as malaria and tuberculosis, nevertheless the new knowledge gained some years ago.

Commissioner in his during recent years as to the incidence of this He points out that since disease may be as high as five to seven per cent. tion constitutes a grave danger to the public

Finally, mention is made of two other sections of the population amongst which a heavy mortality occurs. Figures show that in 1986 about 11 million infants died before they reached the age of one year, whilst approximately 150.000 women died in child-birth or from causes associated with child-birth.

No preventive campaign against malaria, against tuberculosis or against leprosy, no maternity relief or child-welfare activities are likely to achieve any great success unless those responsible recognise the vital importance of the factor of defective nutrition and from the very start give it their most serious attention. Abundant supplies of quinine and the multiplication of tuberculosis hospitals, sanatoria, leprosy colonies and maternity and child-welfare centres are no doubt desirable, if not essential, but none of these go to the root of the matter. The first essentials for the prevention of disease are a higher standard of health, a better physique and a greater power of resistance to infection.

These can only be attained if the food of the people is such as will give all the physiological and nutritional requirements of the human frame.

The last census was taken in 1931. During the following six years up to the publication of the latest annual report, little has happened to disturb the customary large additions to numbers. As a result, the annual natural increases in population have been fairly regular and have averaged as high as 12 per cent. over the six years, in spite of a temporary decrease to 9 per cent. in 1934. At no period in the recorded history of Indian vital statistics has the natural increase of population maintained such a high level and, in British India alone, approximately 184 millions have been added to the population since the last census. On the reasonable assump-tion that the same rate of increase has occurred in the Indian States, the population in India as a whole has increased since 1931 by 6.1 per cent. bringing the total estimated number to well over 370 millions. The fact that registration of births is defective only means that the actual population is even higher than this estimate would indicate. The percentage of error in Indian vital statistics may make it difficult to draw definite inferences from the recorded figures of a single year. Over a period of years however, the trend of events becomes obvious even to the amateur statistician and there seems to be no doubt that heaving releast addents to be no doubt that, barring violent epidemic outbreaks, the population of India by 1941 will exceed the 400 million mark which was forecast

Matural increases accruing from excess of births over deaths for decennial periods from 1871 to 1930 and for individual years from 1931—36 are given in the following table:—

		Annual number of Births.	Birth rate p.m. Annual number of deaths.		Death rate p.m.	Annual excess of births over deaths.

Among officers of the British Army in India, 428.8 per 1,000 were admitted to hospitals during the year, compared with 470.1 in 1935. There were 14 deaths, giving a ratio of 6.17 per 1,000 compared with 16 and 6.74 in 1935. The average constantly sick in hospital was 31.54 or 18.90 per 1,000 of strength as compared with 87.61 or 16.89 in the previous year. A total of 1,229 or 541.6 per 1,000 of the strength were treated as outpatients.

Of British soldiers 30,301 or 582.1 per 1,000

were 129 deaths or 2.48 per 1,000 of the strength compared with 134 or 2.55 per 1,000 in 1985.

The most important causes of mortality among soldiers were :

Local injuries (including 18 Gun shot wounds) Pneumonia . 21 19 General injuries 18 Infectious diseases . . Digestive diseases .. 17 Circulatory diseases

There were 572 or 10.99 per 1,000 of the of strength were admitted to hospitals, compared strength sent home as invalids compared with with 567-1 in 1935 and 580-5 in 1913. There 868 or 6-90 per 1,000 in 1935. The principal cause of admission to hospital of British troops was malaria of which there were 3,017 cases, diseases next in order being cellultis with 2,297 cases, sandfly fever 1,758, consiltis 1,516, gonorrhoea 1,340, dysentery 1,283, sprain 866, diarrhoea 859 and bronchitis 834.

1.000 in 1935.

 Includes Reservists. Indian Territorial Force, Royal Indian Marine, Indian State Forces. R. A. F. Civilians and Pensioners.

The admission rate of officers sick in hospital in 1936 was 346.3 per thousand of strength as compared with 346 8 in 1935. Among soldiers 49,703 or 426.5 per thousand or strength as compared with 346.8 in 1935. Among soldiers 49,703 or 426.5 per 1,000 of the strength were admitted to hospital, compared with 422.7 in 1935. There was thus an increase of 3.8 per 1,000 on the 1935 figures. The death rate among Indian soldiers shows an increase of 0.01 per 1,000 from 2.15 in 1935 to 2.16 in 1936.

LEPROSY IN INDIA.

approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. Leprosy has been known in India for over 3,000 In 1921, when a Census was made, leprosy was regarded as an infirmity like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it was recognised doubtful if this figure represented anything more than the more advanced cases and that possibly a majority of this number were the begging and pauper lepers who are seen all over the country. Dr. E. Muir, M.D., F.R.O.S., the Leprosy Research Worker at the Calcutts School of Tropical Medicine, said that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire an annual revenue of over Rs. 1,22,000.

Leprosy Belief Association was constituted in The policy and principles of the British England with H. B. H. The Prince of Wales Empire Leprosy Belief Association, Indian as Patron, the Viscount Chelmsford as Chair Council, with regard to provincial committee

It is exceedingly difficult to give anything man of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy feit that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,68,065 yielding

are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India." which was published in 1926. This document sought to bring out the following main points which according to the latest adentific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest :-

- (1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.
- (2) Segregation is not the most appropriate method of dealing with lepers, for
 - (a) financially it would be impossible:
 - (b) any attempt to impose forcible segregation would drive patients, parti-cularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.
- The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.
- (4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases,

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, soncentrated upon the establishment

- (a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infecti-ous and less remediable; and so
- (b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generations will become fewer.

The Council's main work during the first several years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product of its activities is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject."

The survey figures published by the Council have aroused much interest throughout India and many Provincial Governments give grantsin-aid for asylums, homes and clinics. Through the generosity of the Council and of the Calcutta School of Tropical Medicine training in modern methods of treatment is given to doctors sent up by all Provinces and several Indian States and they, in turn, pass on their training to others in their own parts of the country. The Calcutta School commenced leprosy research in 1920, is still continuing it and has obtained most valuable results. Treatment has consequently improved and early cases are more readily coming forward than formerly.

His Excellency the Vicerov is the President of the Indian Council, the Director General of mittees should, for the present at least, be concentrated upon the establishment of Board, and Sardar Bahadur Balwant Singh dispensaries to serve the following objects:—

BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented. In Egypt, renowned for its suffer-ings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr. MacCallen, has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great "trachoma belt" extending from China into Restern Europe, stopped only from spreading all over the West by the higher standard of Mying, sanitation and cleanliness which the European nations have attained.

India is in this great Blindness Belt. According to the last census returns there are 480,000

totally blind persons in this population of more than 300 millions. That is an incidence of 11 totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Nasik district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7; in Bijapur 2.6 as against 0.7; in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palanpur 7 per thousand was found. If, as is not unlikely, this sort of error of underestimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 11 millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness

and efficiency are thus greatly impaired. The term "blindness" has a different interpretation in every country. In a report on the Pre-vention of Blindness, published by the League of Red Cross Societies these different interpreof Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses; or for illiterates, inability to distinguish forms and objects with sufficient distinctness"; and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated would be very much larger than those indicates above. The All-India Blind Relief Association which made an analysis of a very large number of patients attending its camps and dispensaries a few years ago found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

Associations known as "Blind Relief" Associations have been working for several years in Western India, in conjunction with Government hospitals, to alleviate this affliction of blindness.

The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals, which bring relief to the villages in the rural areas. They also work by means of trained village workers whose duty it is to find out the "hidden blind" and get them to the medical centre for relief: to find out cases of small-pox (a constant source of blindness in children); to inspect new born children for the detection of ophthalmia neonatorum; to keep registers of all blind and partly blind persons and persons suffering from eye disease; and to treat in the villages simple cases of conjunctivitis or sore eyes. their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown.

Considerable progress was made in 1934 with a scheme which the Indian Red Cross Society is carrying out in co-operation with the National Institute for the Blind, London, for training teachers in the prevention of eye disease. The National Institute gave £50 for organising eye courses for the teachers and £120 for free distribution of literature. Courses of instruction are being organised and general publicity done.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal and infant mortanty. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, eften more. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, progress of the infant which owes much to the All-India Maternity and Child Welfare League Initiated by Lady Chelms-ford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the larger towns in India. The amalgamation of these two Bodies which has taken place, form-ing the Maternity and Child Welfare Bureau, will undoubtedly increase and develop the will undoubtedly increase and develop the work. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Angio-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on field, that a consistent widespread effort on a scale hitherto impossible must be under-taken, if any appreciable reduction is to be made in the appalling mortality of young children.

differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being increasingly realised, and nowhere more than in the units themselves. The result has been in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres many of them assisted by the M. & C. W. Bureau Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively Centres of Activity are organised on a and try to rear a few well developed children as provincial basis, though the various provinces far as adolescence or extensively attempt to

hring a large number of infants through the first stitical months, only to have them perish at a later stage from the many ills that childhood is her to in a land of great poverty, underscensishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage

rate of sickly, under-developed, incompetent citizens.

11 15

The maternity and Child Welfare Bureau, which works in conjunction with the Indian Red Cross Society, spends a large proportion of its funds on education. It maintains schools for training health visitors, and nursery schools. Assistance is also given to the Welfare Centre, which provides field work for the students taking the Diploma in Maternity and Child Welfare at the All-India Hygiene Institute at Calcutta. The Bureau provides a central adviser on the subject and thus helps co-ordinate work in different provinces. The Victoria Memorial Scholarship Fund is earmarked for the training of indigenous and other midwives. There is a large and growing demand for these attendants and systematic registration of them is desirable.

INDIAN RED CROSS SOCIETY.

When the Great War first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on Independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Bs. 1,77,85,716 of which some 17 lakha had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-six Provincial and State Branches.

The objects on which the funds of Society may be spent are :—

 The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.

2. The care of those suffering from Tuber-

soldiers and sailors, whether they have contracted the disease on active service or not.

- 3. Child welfare.
- 4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.
- 5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in Iudia and which are recognised by the Society.
 - 6. Home Service Ambulance Work.
- Provision of comforts and assistance to members of His Majesty's Forces whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and anything between Re. 1 and Rs. 12 annually or consolidated payment of Rs. 50. At the end of 1938 there were 20,000 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces have followed suit and at the end of 1988 the number of members was about 5 lacs.

Constitution.—His Excellency the Vicercy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-President nominated by Provincial or State Branches, 8 selected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is Major General E. W. C. Bradfield, Director General, I.M.S., and the Organising Secretary,

The Indian Red Cross Society professes itself as an essentially Indian Society. Most of its members (about 96 per cent.) are Indians. It is controlled in India. Its headquarters are at New Delhi. The Society received a gift of a lakh and a half of rupees from H. H. the Nawab of Junagadh to build headquarter offices in New Delhi, It has branches in every Province of British India and in several Indian States, These branches are again sub-divided into districts, so that there is a network of Red Cross centres all over India. The provincial branches appoint representatives to the Central Committee, called the Managing Body. This Central body, after deduction of management expenses, distributes all its income from invested funds among the branches for their activities.

Like other Red Cross Societies, the Indian Society has never lost sight of its primary Medical Service in case of war. It maintains a Central Supply Depot administered by headquarters. A large number of military hospitals are supplied with additional equipment and comforts, and these are much appreciated. The Bengal Branch has a Literature Committee, which supplies regular parcels of literature to troops, especially to those stationed in lonely outposts, and many grateful letters of thanks are received. Discharged soldiers suffering from chronic diseases, particularly tuberculosis are referred by the Army Medical Service to the Red Cross, which follows up the men on their return to their villages, and arranges, where possible, for their treatment. Under this scheme many hundreds of cases have been dealt with.

The greater part of the Society's income is spent upon its peacetime programme. It seemed to those who directed the Society in its early years that the first and most crying need was to teach mothers how to bring up healthy children and child welfare has been placed in the forefront of its programme.

The health visitors employed in the child welfare centre are trained at Health Schools also gives assistance in disasters.

which are at Delhi, Lahore, Calcutta, Poons and Bombay. Several students from India have been granted scholarships by the League of Red Cross Societies to follow the international courses for Public Health Nurses in London. The training is now arranged by the Indian National Committee of the Florence Nightingale International Foundation with the help of a scholarship given by the Indian Red Cros Society from the income of a special endowment received by the Society from the Silver Jubilee

Special mention must be made of the Army child welfare centres, most of which receive generous support from Red Cross funds. These centres are run for the wives and children of British and Indian troops, and are doing excellent work. The Central Provinces and Berar Branch of the Society opened a Nursery School in Nagpur, and this pioneer school, under Red Cross auspices has proved a great success.

Popular health education is carried on steadily by the Society by varied methods. Health lectures in many different vernaculars are regularly organised under Red Cross auspices illustrated by films and slides.

A large number of civil hospitals in India receive regular assistance from Red Cross funds.

FINANCES .- The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1938 stood at a capital investment of the face value of approximately Rs. 78; lakhs. The income derived from the capital of the Society (which is 3 lakhs at present), after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

The Indian Red Cross Society maintains a Roll of Trained Nurses for war purposes, It

St. JOHN AMBULANCE ASSOCIATION (INDIAN COUNCIL) AND

St. JOHN AMBULANCE BRIGADE OVERSEAS (EMPIRE OF INDIA).

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects:-

The instruction of persons in rendering (a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured;

(b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room ;

(c) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over \$26,000 certificates of proficiency in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft and over 16,000 tokens such as Vouchers Medallions, Labels and Pendants for special proficiency in those subjects. In addition over 65,500 certificates have been issued to tion over 66,500 certificates have been issued in the elementary course for school students known as Mackenzie School Course in First Aid, Hygiene and Sanitation.

(d) The Organisation of Ambulance Corps, The object of the Association is not to rival invalid Transport Corps, and Nursing Corps; but to aid the medical man, and the subject-

advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1938, 32,562 persons attended courses of instruction in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft. Of these 20,525 qualified for the Association's certificates: i.e. 18,559 in First Aid, 1,174 in Home Nursing, 680 in Hygiene and Sanitation and 112 in Domestic Hygiene and Mothercraft.

A new course of instruction in Air Raid Precautions has recently been introduced with the assistance of the military authorities. the assistance of the military authorities, During 1988 nine classes in this subject were held at various stations, notably in Bombay, and 181 certificates, including 59 instructors, were issued to those who qualified for them. This instruction is at present confined to the personnel of the St. John Ambulance Brigade Overseas, but it may be extended to general public with the approval of the provincial government concerned.

The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Their respective subscriptions are Associates. Rs. 1,000, Rs. 500, Rs. 100, Rs. 5 and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interess on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions. It amounted in 1938 to Rs. 31,055.

Their Excellencies the Viceroy and the Marchioness of Linlithgow and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 18 members from the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which Sir Ernest Burdon, K.C.I.E., C.S.I., I.C.S., Knight of Grace of the Order of St. John of Jerusalem, is the Chairman and Khan Bahadur Dr. Abdul Hamid, the General Secretary. with President and Chairman, respectively

The St. John Ambulance Brigade Overseas is a uniformed, disciplined body of men and women, all of whom are holders of First Aid, and in the case of women also Home Nursing certificates. They meet together regularly for practice, are inspected and re-examined annually and undertake to turn out for public duty whenever

required.

The Brigade in India is commanded by Sir

Chief Commissioner for the Ernest Burdon, as Chief Commissioner for the Under him are 11 Districts Empire of India. covering almost all the provinces in British Order and the Society.

matter of instruction given at the classes qualifies India and some of the Indian States, with the bupil to adopt such measures as may be headquarters at Lahore, Calcutta, Bombay, Madras, Bangalore, Lucknow, Nagpur, Patna, Delhi and Karachi and there is one also on the East Indian Railway. In charge of each District there is an Assistant Commissioner or a Commissioner according to the membership strength of the District, and as the work of the Brigade lies so much in the medical and surgical sphere, the Officers-in-Charge of the Districts are generally the administrative heads of the Civil Medical Departments of the respective pro-vinces. It is their business to organise and maintain the training and efficiency of Ambulance and Nursing Divisions and to see that they are available for public service on occasions when they are required.

At the end of 1938 the Brigade in India consisted of 107 Ambulance Divisions, 29 Nursing Divisions and 36 Cadet Divisions (boys and girls) with a total membership of over 5,000. These Divisions render first aid on public occasions, for example festivals, processions and public assemblages of all kinds. At times of special emergencies they turn out promptly and remain on duty so long as they are required. Some of the recent occasions when Brigade members have rendered valuable service are the Bihar Earthquake (1984), when Calcutta members established a camp hospital at Monghyr, the Quetta Earthquake (1935) when Lahore members living in railway trucks at Quetta station gave valuable help to the stricken people, the Bombay riots in successive years, where the local Divisions earned the warm appreciation of the Government of Bombay, the Bihta railway disaster (1937) when the Dinapur Nursing Division gave prompt assistance and the Kumbh Fair at Hardwar (1938) when members from the United Provinces were on First Aid duty for over a fortnight.

The members of the Nursing Divisions enrol themselves as Voluntary Aid Reserves to supplement the nursing branch of Medical Service of the Army in India in time of war while the services of the Brigade personnel both men and women, trained in Air Raid Precautions are at the disposal of Government for the training of general public and also in connection with any other measures which may be adopted for the protection of civil population against aerial attacks.

Both the St. John Ambulance Association and Brigade work under the aegis of the Order of St. John of Jerusalem and as their work is complementary to that of the Indian Red Cross Society, close co-operation exists between the

INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has an up-to-date and well equipped Mental Hospital at Bangalore, there are no mental hospitals in evistence, so that persons State which has an up-to-date and well equipped is roughly 40 per 10,000, while in New Zealand Mental Hospital at Bangalore, there are no mental hospitals in evistence, so that persons these figures it must be borne in mind that suffering from all forms of mental disease are those of the United Kingdom and New Zealand confined in the jalls where, of course, no provition exists for any kind of treatment. According not included in the figures for British India.

to the last Cenaus (1931) out of a total population of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying It has assisted by grants-in-aid the building of Medical Aid by Women to the Women of India a number of zenana hospitals in different parts was founded by the Counters of Dufferin in 1885. women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition branches were formed in each Province, each branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grante-in-aid to several Provincial branches; it gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi. Secretary, Dr. (

and Council of that Fund, The Governtent of India has so far allotted the sum of
25,000 per annum towards its maintenance. into service is included in the National Asso-ciation for supplying medical aid by women to the women of India, generally known as the Countees of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Govern-ment of India has so far allotted the sum of £25,000 per annum towards its maintenance. The present sanctioned cades is fort-fore first The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (a) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.-The qualifications that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person or Chief under the suzerainty of any Native Prince in the reserve shall be considered by the Erscutter or Chief under the suzerainty of His Majesty tive Committee when appointments are being exercised through the Governor-General of India or through any Governor or other shall not of itself constitute a claim to officer subordinate to the Governor-General appointment.

at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the Service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After three years of probation have been statisfactorily passed their appointments are confirmed.

The Training Reserve of the Wemen's Medical Service.—This Service has a sanctioned cadre of 14, and is open to wemen graduates in medicine of the Indian Universities. Salarles range from Rs. 100 to Rs. 200 per month, with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the 14 members of the reserve but not more at any one time, may be departed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 61 lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. An additional Rs. 1,39,000 was allotted to the Fund from Their Majesties' Silver Jubilee Fund in 1985. Thousands of

midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. Registration is urgently needed. The Fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

NURSING.

of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staff are maintained, avail-able to the general public on payment of a composed of the various Nursing Association. This was composed of the various Nursing Association in prescribed scale of fees. These Hospitals also act as training institutions and turn out a

Whilst India cannot show the complete chain | yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation went a step farther, through the establishment of the Bombay Presidency Nursing Association. This was composed of the various Nursing Associations in the relations of this Association with the Local Registration Act in the United Kingdom. central examination and control combined with complete individual autonomy in administra- tion from 1st April 1929. tion.

State Registration of Nurses for all India is much required. The subject has been under discussion for years. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has established a Provincial Register preparatory to an All-India Register.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first step was taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, the Govern-ment laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the associa-tions are still largely dependent upon annual subscriptions towards the maintenance of their works.

The Bombay Presidency Nursing Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association and it appeared to the Committee improbable that it could be carried out. The auxiliary function of the examining and granting certificates to nurses and midwives and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations were, however, carried out. The Memorandum, Rules and Bye-laws of the Association were not revised and brought into line with the actual working of the Associa-tion. This was done towards the end of 1927, when the Committee decided that some steps must be taken to do so. Accordingly a Sub-Committee was appointed to consider the revision and amendment of the Memorandum, Rules and Bye-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the rules piecemeal and that the only way to put the things in order was to draft an entirely fresh constitution and rules.

Associations was governed was that there was Pending the passing of the Act, the New Memorandum of Association was brought into opera-

> Establishment of the Bombay Nurses, Midwives and Health Visitors' Council.—The need of legislation for the Registration of Nurses, Midwives and Health Visitors had existed in the Province since a long time and with a view to protect the public from the activities of persons who misrepresent themselves to be fully qualified Nurses, Midwives or Health Visitors, Government in April 1935, passed the Bombay Nurses, Midwives and Health Visitors' Registration Act. In the absence of State Registration the nurses trained in this Province were subject to certain disabilities and were refused Registration in other Provinces and in other countries, where state registration prevailed. The Act obtains for them the necessary status and secures their registration in other provinces in India or in other parts of His Majesty's Dominions which are willing to reciprocate with the Bombay Nurses, Midwives and Health Visitors' Council which was established in August 1985.

> From the date of the establishment of the Council, the Bombay Presidency Nursing Association became defunct. The training and registration of nurses, midwives and Health visitors in this Province is now controlled by the Council. Nurses who are trained and registered in this Province can now get registration with the General Nursing Council of England and Wales and the General Nursing Council of Scotland and can practice as qualified nurses in these Countries.

> Lady Minto's Indian Nursing Associa-tion.—The Lady Minto's Indian Nursing Association was founded in 1892 under the title of the "Up-Country Nursing Association" primarily, though not exclusively, to provide Europeans with the skilled services of the Nursing Profession.

> The Puniab and the United Provinces were the first provinces to consider the possibility of providing nurses for private work, but it was not until 1906 that provision was made on a really adequate basis.

> Lady Minto issued an appeal to the public both in India and England which roet with a generous response, with the result that now Minto Sisters work in seven centres and it is rare for a subscriber to the Association in any part of India to be refused the services of a nurse in case of need.

> The financial liabilities of the Association are met from five sources :--

> Interest on the Endowment Fund; Government Grant; Donations; Subscriptions; Fees.

It is the practice of the Association to invite people to become annual subscribers. This carries with it two advantages; priority of claim to the services of a Sister, and a reduction in the fees paid for those services. Thus Europeans who are members of the Association are enabled After fully considering the Sub-Committee's to obtain skilled nursing at moderate charges report, the Committee agreed that the Association as aliding scale of fees determined by their tion be incorporated by an Act on the line of the come of each patient.

٥

The English Committee is responsible for the recruitment of the majority of the staff but if it happens that suitably and fully trained women are obtainable in India, the Central Committee in India has the power to enlist them on the spot.

In addition to this duty the Indian Committee deal with all matters of administration delegating to the Provincial Branches questions of local significance.

Her Majesty Queen Mary is a Patron of the Association.

Her Excellency the Marchioness of Linlithgow is President of the Central Committee in India.

Hon. Secretary :- Lieut.-Col. H. H. Elliot M.B.E., M.O., M.B., F.R.O.S., I.M.S.

Chief Lady Superintendent :- Miss C. Wilson, Central Committee.

Lady Minto's Indian Nursing Association, Viceregal Estates, Simla, and Red Cross Buildings, New Delhi.

Secretary, Home Committee,-Miss R. E.Darbyshire, R.R.O., 92, Ember Lane, Esher, Surrey.

Nurses' Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has the one set of officers. The Trained Nurses' Association of ompore. The Trained Ausses association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting esprit de corps among nurses, and upholding the dignity and honour of the nursing profession.

The Associations have a membership of 472 including nurses trained in ten or more different countries, Europeans, Americans, New Zea-landers, Australians and Indians. The Associa-tion of Superintendents was started in 1905

The control of the Association is in the hands of the United Provinces and the Punjab, but of two Committees; one in England and one by the next year its membership had spread in India. over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are smilated with the International Council of Nurses.

> The Trained Nurses' Association of India was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession; (b) to promote a sense of esprit de corps among all nurses; (c) to enable members to take counsel together on matters affecting their profession; (d) to elevate nursing education by obtaining a better class of candidates; (e) to raise the standard of training; (f) to strive to bring about a more uniform system of education, examination and certification for trained nurses, both Indian and European; and (g) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League and the Midwives' Union. The official organ of the Association is called "The Nursing Journal of India''

THE WOMEN'S MOVEMENT.

smooth run in India. Imperceptibly but steadily, during the past ten or twenty years, the women of India have acquired numerous rights, social and legal no less than political. Their political enfranchisement has been achieved with considerable case.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally

The women's movement has had a remarkably by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the intro-duction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, sithough with the measuline as shown by the import-women compose half the people of the country ance of goldesses, by the necessity for the and it had been by the joint efforts of men presence of the wife at all ceremonies performed and women that the agitation for reform in

America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was sud-denly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seats in the Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Woman contestant in the municipal elections in Lucknow secured the largest poil of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political selfconsciousness amongst women to a very great extent. The moment for the ripe public expres-sion of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic All-India Women's Deputation which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 8) that 'the

the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unreduced a franchise is being drawn up, women may dressed. Thirdly, the long and atrenuous be agitation for the vote by women in Britain and worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the above mentioned Memorandum that a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Em-Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we preparative claim that in the drawing up of all urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

> The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disspointment first that though the Secretary of State had given a sympathetic reply to the Ali-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the South-borough Franchise Committee was formed to investigate the suggestions regarding franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of, the inclusion of women in the new franchise.

> After the introduction of the Government of India Bill into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the Women who were heard by the Committee in support of, the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 Members of the Council should be elected directly years' time limit. Until after that period women by the people on as broad a franchise as possi- were ineligible for election as Legislative ble,' and in the Memorandum (3) that 'the Councillors.

Beviewing the position about ten years later | have marched from reform to reform, and their the Simon Commission showed the extremely limited extent to which women, enfranchised in the manner set out above, had become qualified as electors. Except in Burma, where it was comparatively high, the percentage of women struggle from which they emerged fully conscious electors to adult female population was of their political rights and responsibilities. The less than one. In Madras it was one, in part played by the two representatives of Bombey, 8, in Bengal. 3, in the United Provinces Indian womanhood at the India Round Table 4, in Bihar and Orissa . 5 and in Assam . 2-in Burma it was 4.6 per cent.

Madras led the way in the matter of women's franchise and under the operative provision of the Government of India Act, women became enfranchised. Other provinces followed suit, and at the time of the inquiry by the Simon Commission seveneout of the nine provinces had acquired the right. Very soon women began to adorn the benches in legislative chambers, first by nomination and then by election. And they justified the confidence placed in them by spon-soring and successfully carrying through many measures of unlift and reform in regard to the status and influence of women. They had so much proved their worth that the Simon Com-mission remark in their report: "The women's movement in India holds the key of progress. franchise and under the operative provision of movement in India holds the key of progress, and the results it may achieve are incalculably great. It is not too much to say that India cannot reach the position to which it aspires in the world until its women play their due part as educated citizens."

Basing their conclusion on these observations, the Simon Commission wished to bring about a substantial increase in the existing ratio of women to men voters. In exercising the option allowed to them of enfranchising women "on the same terms as men", the provincial legis-latures did indeed make a significant gesture; but so long as the qualification to vote was almost entirely based on property, it remained a gesture, because India's women do not own property in their own right.

The Simon Commission affirmed that a further step in developing women's suffrage in India should be taken immediately and added: "It may perhaps be found possible to add to the present qualifications two others, namely, (i) being the wife, over 25 years of age, of a man who has a property qualification to vote and (ii) being a widow over that age, whose husband at the time of his death was so qualified. In addition, the educational qualifications should apply to women over 21 as well as to men. The Simon Commission maintained that women's suffrage should be a cardinal point of the "fran-chies system" and suggested "qualifications for the vote which will not confine it to the few women who have property qualifications."

During the last ten or fifteen years, the women of India have made enormous progress in several directions. A great awakening has dawned on them. The raising of the age of consent for marriage, the abolition of the practice of dedicating girls to temples, the demand for legal and property rights vis-a-vis man embodied in some of the reform measures—all have tended to raise the status of Indian women in their own eyes as well as in the eyes of the world. They constitution.

outlook is for ever widening. The Gandhi movement evoked an unprecedented outburst of service and sacrifice among Indian women who were thrown into the thick of a political Conferences held in London brought them in the lime-light.

Small wonder, therefore, that the Government of India Act of 1935 gave Indian women political rights far in advance of those enjoyed by them before that date. In terms of number of seats, women have been allotted 6 seats out of a total of 150 reserved for British India in the Federal Council of State and 9 out of a total of 250 so reserved in the Federal Assembly. In the Provincial Assembly, women have reserved to them 8 seats in Madras, 6 in Bombay, 5 in Bengal, 6 in the United Provinces, 4 in the Punjao, 4 in Bihar, 8 in the Central Provinces and Berar, 1 in Assam, 2 in Orissa and 2 in Sind.

But by far the greatest improvement in women's political rights occurred in the liberalisation of the franchise qualifications affecting them. Women have been enfranchised who have the property qualification in their own right, or are wives or widows of men so qualified, or are wives of men with a service qualification, or are pensioned widows or mothers of members of the military or police forces, or who possess a literacy qualification. Women not holding the requisite qualification in their own right are required to apply to be enrolled, stating their derived qualification, but this procedure has been waived in respect of some provinces. By means of such enfranchise, it is estimated, more than six million women (against 315,000 under the Act of 1919) have been given the right to vote, compared to 29 million men.

It is noteworthy, too, that men and women can vote both in general constituencies and in special constituencies. Women can vote in and contest elections to the upper House in provinces where bicameral legislatives have been set up.

Indian women have hailed this as a welcome improvement in their political status and the elections that were held carly in 1937 to the various Provincial Legislatures showed that they were alive to their responsibility under the new Franchise. Women were very much in evidence at the polls, even in purdah-ridden provinces.

Such is the advance made in recent years and such is the widespread recognition of women's claims that women candidates have successfully contested general seats in ten cases, one in Madras, one in Bombay and eight in the United Provinces. The significance of these successes lies in the fact that the women defeated men in constituencies in which men voters predominate.

The table given below shows the percentage of women voters who exercised their franchise in the first general elections held under the 1985

Provin	ces.		No. Enrolled.	Number who voted.	Per cent	
LOWER HOUSE	Σ.					
Madras			1,523,248	479,278	81.5	
Bombay			805,750	129,535	42.4	
Bengal .			896,588	46,758	5.2	
United Province	es .		494,752	95,558	19.3	
Punjab .			173,459	58,216	88.56	
Bihar			215,490	17,037	7.9	
Central Province	ces and	Berar .	259,750	63,744	24.5	
Assam .			29,680	8,678	29.28	
North-West Fre	ontier I	Province	4,895	8,498	71.4	
Orissa			70,526	4,670	6.62	
Sind			27,940	9,705	34.7	
UPPER HOUSE	ì.					
Madras .			2,578	1,420	55.1	
Bombay .			1,636	923	56.4	
Bengal			2,136	437	20.5	
United Province	es .		1,684	598	35.5	
Bihar			882	594	67.34	
Assam .			559	512	91.57	

In many cases the percentages given above does not compare unfavourably with those of men voters. The voting for the Lower House in the Frontier and that for the Upper House in Assam are flattering to the women and shows what organisation can achieve.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights.

All-India Women's Conference.

In recent years Indian women's rights, In recent years indian women's rights, grievances and demands have been voiced principally by the All-India Women's Conference. The last Session of this body was held in the winter of 1938-39. Rani Laxmibal Rajwade, who presided, sketched a programme of "constructive politics" for Indian women and pleaded that the work of the leaders of the Indian women's movement must be such as to meet the criticism that theirs was a wholly bourgeois organisation. She advised the conference firstly to widen the basis of its constitution so as to include, along with other reconstructive activities for women and children, political activities of a non-party and con-structive nature. A clear declaration of their unity with many of the political parties in India regarding the accepted goal of independence for India should be made forthwith. declaration, she thought, should be supplemented to confer greater rights and freedom on women.

by a national effort to explain to Indian women. wherever their organisation could reach them, why and how far the form of Government affected their lives. She suggested a programme of general political education of women, so as to make them familiar with democratic forms and with women's rights and duties under demo-cracy. She urged the women of India to realise the importance of making use of the vote for the attainment of political freedom. The Rani declared herself totally against the idea of a women's party in the country. She thought that there was no necessity for a women's party, so long as the question of Indian in-dependence was not settled. It was the duty of women to subordinate their sectional interests to the larger interests, in which surely they were in complete unity with the men of India. She thought that the All-India Women's Conference as a body should, for some time to come, remain aloof from the disconcerting hurlyburly of party-politics, though individual members of the conference were free to participate even in party politics.

As was to be expected of any women's organi-sation, the conference passed an anti-war resolution. Among the other subjects on which resolutions were passed were sex education, marriage hygiene clinics, dissolution of marriage and traffic in women.

Both evidence and result of the awakening among Indian women are to be found in more than one legislative measure sponsored in the past year or two by women legislators calculated

The School of Oriental and African Studies.

This School was established by Royal Charter | departments as follows: (i) India, Burma in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London (Now School of Oriental and African Scudies) In a considerable proportion of the spoken to give instruction in the Languages of Eastern languages instruction is given by teachers trow school of Oriental and African Scudies) to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, Law, Customs and Art of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School occupies temporary premises at Vandon House, Vandon Street, Westminster, S.W.1. Plans are approved for the new building of the School on the Bloomsbury Site of the University of London.

belonging to the countries where the languages are spoken, as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. The Department of Phonetics is equipped with electrical recording apparatus, and gramophone records are made of all the languages taught at the School. These are accompanied with phonetic transcriptions.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of public lectures to be given by distinguished orientalists not on the staff.

Patron, H.M. the King. Chairman of the Governing Body, The Bt. Hon. Lord Harlich, The School provides teaching in many Turner, M.O., M.A. Litt. D. Secretary, F. J. R. subjects. The work is carried out in six Bottrall, M.A.

The Fisheries of India.

were they exploited in a fashion comparable with those of Europe, North America or Japan. with those of Europe, North America of Japan.
The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, oured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who slike from their want of education, the isolation caused by their work and caste and their extreme and in the introduction and testir conservation, are among the most ignorant, improved apparatus and methods.

The fisheries of India, potentially rich, as suspicious and prejudiced of the population yet yield a mere fraction of what they could extremely averse to amending the methods extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists capitalista cannot be counted upon to assist in the developcannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the inkitative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and

Madras.

fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets degradent in narrours whereon using neets can be based, and so from Ganjam to Nega patam, the unsinkable estamaran, composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations of rounseribe the fishing power of its owners and consequently these men are poor and the produce of their best afforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No dimenity is found in beaching canoes and boats throughout this season. cances and ocus toroughout the season. The fishing population is a large one. In the census taken by the Department of Fisherica in 1980-S1, the fisher-population on the West coast totalled 128,294. The externed table fish of the coast consist of the Beer (Cybium or Scomberomorous), Pomíret (Apolectus and Stro-maisus) several large species of Horse Mackerel (Corene), Jew fish (Scientides), Whiting (Sillage), Thread-fine (Polynemus), Sardines (Ciupea), and Mackerel (Scomber). In economic (Chupes), and Mackerel (Scomber). In economic importance, however, shoaling fish and fish of inferior quality such as Bardine (Chupes). Mackerel (Scomber), Catfish (Arise), Ribbon fish (Trichiurus), Gosgles (Carens erumenopthalmus) and Silver-beilles (Leiognathus and Cazza) take precedence of the former. Bardine and Mackerel (Scomber 2011) of the Sardine and Mackerel (Scomber 2011) Mackerel overshadow all others. A master fisherman of experience was recruited from fighterman of experience was recruited from The activities of the Department are so varied from 1800. He found it impossible to an advantage of the fighter of the stand the climate of India and had to be repatricularly the stand the climate of India and had to be repatricularly the stand the climate of India and had to be repatricularly to the standard than 1937. Since then efforts to revive deep sea fishing research begun by the traveler industrial successes have been the reform of Lady Goschen' have been made. Proposals to charter a motor boat smaller than a traveler the creation of a fish guano industry and the but capable of employing all known methods opening of an oyster farm conducted under of sea fishing for bottom, mid-water and surface hygienic conditions. The most noteworthy

The Madras coast line of 1,750 miles is fish in order to test the suitability of these margined by a shallow-water area within the methods for Indian conditions, have reached an advanced stage. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres; the material is largely cured for export.

> The Madras Department of Fisheries. As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August Department of Government which till Auguss 1923 was being administered by Mr. James Hornell, F.L.S., as Director and, is now controlled by his successor Diwas Bahadur Dr. B. Sundara Raj, M.A., Ph.D. The activities of the Department have greatly expanded since its inception.

The activities of the Department are so varied

result of technological research conducted by the in the hot season and few of the many thousands department is the production of sardine oil with vitamin A potency equal to one-fourth that of Cod liver oil and the discovery of four other Indian Sea fish which yield oils with a high vitamin A content. Oil from a South Indian shark liver is ascertained to be about nineteen times richer in Vitamin A than an average sample of medicinal cod liver oil. Twentyseven volumes of the Departmental Bulletin have been issued to date. All this work has been carried on under serious handicap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches in training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and the supply of zoological speci-mens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Laboratory Assistant, Fisheries Station, Ennur, Madras, at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increas-ing number of yards or bounded enclosures were opened at which sait is issued free of duty and often at rates below the local cost of the salt to Government. At present there are 100 fish curing yards scattered along the coast. During the year 1937-38, 1,210,907 maunds of fresh fish were brought to these yards for curing and 199,785 maunds of salt were issued for the purpose. The transactions in these yards resulted in a surplus revenue over expenditure of Rs. 34,108.

Pearl and Chank Fisheries.-While there is no prospect of a pearl fishery for some years to come, owing to the absence of spat fall in the banks, a distinct revival in the chank trade was evidenced in the keen competition for the purchase of the last two seasons' chanks. A total of 309,257 chanks were fished during the year of 300,257 chanks were hand during the year 1987-28, which will fetch a gross revenue of Rs. 67,230. The rearing of Pearl cysters in captivity with the implied possibility of the production of cultural pearls near Krushadai Island, Pamban, started in 1983 has been success-

of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourite of sports-man in India the "Mahseer," Cat-fishes Cat-fisher and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, 5 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and Etroplus suratensis which has the excellent attribute of which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing, a useful habit. Both the Gourami and Etropius are largely vegetarian in dist, The Department has been endeavouring to establish Catla, the quick growing carp of great coonomic importance, into the Cauvery system since 1922, and direct proof of the success of the efforts of the department has been obtained by the capture of hundreds of young cata at almost all the anicuts and sluices in the Tanjore District. A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larve of mosquitoes.
These are supplied in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Morine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of production of cultural pearls near Krushadai island, Pamban, started in 1983 has been successible fluid and there are now five years' old oysters living in the farm. Another experiment in marking of chanks started in 1931 to study the rate of growth, mortality and migration of the rate of growth, mortality and migration of the chank in its natural haunt, is continuing and pearlment of Fisheries. Ever since its opening, so far 2,829 chanks have been marked and liberated.

The Inland Fisheries.—The Inland Fisheries abeen immensely popular with the public. The present building which is antiquated in design has sunk several feet below the general crise of Madras compare unfavourably with level of the beach, and during rains the floor is those of Bengal. Many of the rivers dry up Aquarium and damage to the walls. It is the Presidency. The work though begun in July therefore proposed to build a new and up-to-date 1930 lasted only for 13 months and had to be building or the Aquarium, with modern fittings abruptly stopped as a measure of retrenchment. and up-to-date equipment. A total of 1,26,730 persons visited the Aquarium during 1937-38 and the receipts amounted to Rs. 12,211 against an expenditure of Rs. 7,571-9-0.

Deep Sea Fishing and Research.—The annual report of the Public Health Commissioner with the Government of India for 1933 states that the total land area of British India amounts to only 2.44 acre per head of the population but sllowing for forests and uncultivated and fallow lands only 0.72 acre per head is under food-crop, quite insufficient for even the present population, and that the population is increasing population, and that the population is increasing at an alarming rate and by 1941 will probably reach 400 millions. The finding of the census of 1981 is that Agriculture has reached its maximum production under present conditions. Fisheries therefore is the only prime source of rood-supply to supplement Agriculture, and the Department has been endeavouring to play its supplement Agriculture, and the department has been endeavouring to play its true and proper part in improving the catches and methods of sea going fishermen to augment the fish supply of the Presidency.

The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain-

- (1) what kinds and quantities of fish are available beyond 7 fathoms; and,
- (2) how to exploit these deep sea fisheries economically.

The survey of deep-sea fisheries by the trawler Lady Goechen was abruptly terminated in 1931-32, as a measure of retrenchment. Brief though the survey was it disclosed the existence of important off shore fisheries unsuspected before. The wealth of fish of Negapatam reported by the trawler was of sufficient importance to attract the notice of Japanese fishermen thousands of miles away. Even then it was realized that if Madras was to benefit by the fishermen to exploit the off-shore fishing grounds by suitable craft and tackle must be shouldered by the Department. The Yorkshire Motor Coble was decided on as the most suitable modern fishing boat to supplant the local catamaran and cance on a surf beaten harbourless coast, and one was acquired in 1980-31. In the years of depression however the financial stringency of Government precluded experiments and demonstration with the Coble. Further experiments are being planned.

Rural Pisciculture.—As a result of the

It was, however, possible to complete during this short period a survey of ponds in 98 villages 2,172 wells and 264 ponds in these villages were examined. Though it has not been possible to give satisfactory help to the numerous enquirers for want of staff and funds advice on matters regarding rearing of fish in ponds and wells is being given as far as possible. For a com-prehensive and intensive research on the various problems relating to the occurrence, life history, breeding seasons suitability for stocking waters, their food, conditions of growth, and the physical and chemical characters of the water suited for each, their enemies and diseases, etc., a scheme for a fresh water biological station was drawn up and sanctioned by the Imperial Council of Agricultural Research in 1934, and is still awaiting allotment of funds

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improve-ment of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift. temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1937-38 on the west coast was 48.

The need for special efforts to promote co-opera-tion among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommendboth on the West and East Coasts in the Presi-dency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should or inspectors of Cooperature that the Co-operative Department supplying trained Inspec-tors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 2 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. pupil teachers under training are familiarised with the work carried on in the fishery station at Tanur. They are given practical instruc-tions in fishing, a boat having been purchased for the purpose. But as a measure of economy the training Institute was closed in July 1937. recommendation of the Royal Commission in some places the villagers themselves started on Agriculture that practical measures should the schools and then handed them over to the be adopted to add fish to the diet of the cultivator. Fresh water—so eager is he for immediate profit, however Fisheries, however are vast and very important many cases to be received in the strategy of the strat the rohu (Labeo rohita) and the katla (Catlo whe rohu (Laber rohita) and the katla (Catla calla), mrigal (Cirrhina mrigala); prawns and operatively. This is necessarily extremely some ahrimps abound everywhere. Of important work, but a beginning has been made and a fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbana, the bektl or betkl (Lates calcarifer) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the Mangor-fish or Thread-fin or Indian Salmon (Polymenus) pomírete. The sea-fisheries are as yet little exploited, the fishermen of (Polynemus) as yet little exploited, Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the bostlity of vested interests, the lack of sold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift to unsource instead or sending them by a swirt means of oringing about a reduction in the ruling sender, the experiment was financially a failure prices of fish, and to stimulate commercial and was dropped. With ever-increasing demand for fish in Oalcutta and the concurrent rise in prices, the prospects of remunerative and factories for fish by-products.

The services of Dr. M. Ramaswami Naidu from steam-trawling are now much more, steam— The services of Dr. M. Other valued and abundant fishes are middle men) and enable them to put more capitally. number of fishermen's co-operative societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

During a lapse of 14 years after the closure of the Fisheries Department, the price of fish in Calcutta has been soaring high almost to a prohibitive rate consequent on the rapidly increasing demand and the unhealthy monopoly exercised by the small group of vested interests. The economic condition of the actual fishermen R. G. Gupta, an investigation of the steam was gradually becoming on the actual nanerment trawl potentialities of the head of the Bay of then by the capitalists and the fisheries in general Bengal was undertaken, the trawler Golden were getting depleted due to various causes Bengal was undertaken, the team's the state of the purpose. The which is under consideration of Government.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance finan-cially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries particularly those connected with the utilization of by products.

The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for development. A steam travier was countried work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawier was subsequently sold to the Government was subsequently sold to the Gov ment of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a whole showed that the cost or maintaining a trawler of the type used could not be mot by sales of fish at current market rates. Cold storage has since been installed at the prin-cipal fish market in Bombay, but for a trawler special facilities are needed also for rapid special lacilists are used as the same of for unloading catches. More than this a chance is needed in the medieval conditions under which the local fish market is conducted

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved,

Mr. Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Kisborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Mr. Sorley's more important recommendations are:-

- The establishment of a marine aquarium in Bombay and Karachi, if they are able to pay their way as the Madras aquarium does.
- 2. The establishment of a bureau of fisheries information,
- 3. The advisability of the transfer of the fish curing yards to the control of the Local Government; and
- 4. The encouragement by the Bombay University of marine biological research,
- Mr. Sorley in the course of his report also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

is necession in the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as little known species of edible fish, such as larged, palu, tambusa, and particularly the ray or skate which formed on the average 35 per cent. of the total catch but which is so it above suggestions. The experiment was little esteemed locally that is sold on the little esteemed locally that is sold on the then Governor of Bombay launched formally inaugurated by Sir Frederick Syles, the then Governor of Bombay at Danda. The Vast strides have been made in the Bombay the head of the fishing community at Danda. fishing industry in the course of the past five For the purpose of the experiment a launch was years, the two latter years of which will slawlys obtained on loan from the Royal Indian Navy remain an eventful date in its history. This (then the R. I. M.) and suitable alterations were remain an eventual date in its misrory. This (then the E. I. M.) and suitable alterations were progressis in a large measure due to the awaken—made on it to adapt it to the purpose of a carrier ing among the fishermen, who are traditionally launch. The results achieved by the working a conservative people, and the introduction of lof this launch were very encouraging. The reforms among them is a very gradual process, rapidity with which the fish was transported in as strongly ingrained prejudices and customs a much fresher state than det ill then bees have to be overcome.

who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields.

Encouraged by the results, Government placed in 1934 an order for the construction of two launches the "Lady Sykes" and the "Sir Frederick Sykes" for the use of the fishermen That the progress of this experiment has been encouraging is evident from the fact that every year since then has seen an addition to the number of vessels. The following four vessels were built by Government :-

(1) The "Lady Sykes". (2) the "Sir Frederick Sykes". (3) the "Lady Brabourne" and (4) the "Lord Brabourne".

The last mentioned vessel was built at the Royal Indian Naval Dockyard and is a great improvement both in point of disign and engine equipment on her predecessors. The special feature of this vessel is its insulated fish hold and its comparatively large carrying capacity.

The launches have been operating between Bombay and the Kanara coast. They transported during the short fishing season in 1938-39, a total of 517,964 lbs. of fish, which would normally have never come to Bombay. The success that attended the working of the launches encouraged private individuals to invest in similar vessels to transport fish. The number of privately owned launches at present is eight.

The stimulus to commercial enterprise as the result of the operation of the launches is borne out by the establishment of an ice factory at Chendia, a port in the Kanara District. The tactory has been set up mainly to cater for the needs of the launches, which will thus, to some such large quantities to Bombay as before. The establishment of the ice factory at Chendia brings the number of the ice factories on the coast to two, one having already been started at Malwan, a port in the Ratnagiri District.

The year also witnessed the establishment of a dry ice factory in Bombay, bringing the number of such factories to two. These factories are making special efforts to meet the needs of the fishing industry.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object that they may eventually be able to take charge of their own launches whenever they decide to go in for these on an extensive scale. The benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fashing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or limited to a few months of the cold weather. vocation.

Lastly, a fisheries information bureau has

The more important sea-fish are pomfrets, sole and sea-perches among which are included the valuable lew-fishes (Science spp.) often attaining a very large size and notable as the chief source of "fish-maws" or " sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hall from the coast between Busseln and Surat. These hoats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathlawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stownets, which are left down for several hours and hauled at the turn of the tide. The chiet catches are bombil (Bombay ducks), pomfrets and jew-fishes. The first named are dried in and jew-fishes. The first named are dried in the sun after being strong through the mouth apon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauts of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in alse.

The provision of cold storage facilities in Bombay marks a new departure in the marketing of perishable products and commodities and is a sign that the Indian capitalist is developing a greater interest in fish than heretofore. These extent, be relieved from the necessity of carrying facilities have been mainly designed with a view to making a large supply of fish available in the Bombay market.

> Inland Fisheries.-Government at the beginning of 1936 approved of a scheme for the develop-ment of inland fisheries in the Presidency. A start in the first instance will be made at Bandra, a suburb of Bombay, where two tanks have been obtained on loan from the Bandra Municipality for the purposes of the experiment.

> The experiment will be extended to other parts of the Presidency in the light of the experience gained at Bandra. Government have sanctioned a sum of Rs. 10,000 for inland fisheries work.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soormal, shark, rays and jew-fishes. In order to prevent destructive exploitation of oyster beds the plucking of cyster is confined to licensed fishermen and is The demand for oysters for edible purposes is considerable, but although many seed pearls are procurable it does not pay to work the beds Lastly, a macries information bureau mas are procurable it does not pay to work the beds also been set up. The function of this bureau for these purposes and the export of such seed will be to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be information collected by the bureau will be River Indus, chiefly for the fish known as useful to the fishing industry, as it will furnish palla, which are anniably leased out by information not now available to them.

[Government for about Rs. 20,000.]

The existence of small pearl fisheries almost within Bombay city itself, will come as a sur-prise to many. The fisheries dot Bombay City seaface on its south-western and north-eastern sides. Apart from these two sites, pearl oyster fasheries are also to be found at Thana, a suburb of Bombay about 20 miles away, and at various places in the Kolaba district, facing Bombay on the eastern side of the harbour. The south-western site in Bombay city where pearl fisheries have been recently discovered is situated in blocks Nos. 3 to 7 of the Back Say reclamation scheme. Pearl beds are also found in the Karachi harbour. These pearls are produced by the window pane oyster, but are produced by the window pane oyster, but are produced by the window pane oyster, but are of indifferent quality. seaface on its south-western and north-eastern

Bombay Presidency's resources in respect of edible oysters are very limited. There are few places suited to the cultivation of oyster particularly certain areas in Sind and some sites

The revenue derived from the various pearl fasherles is meagre. They are not leased out fregularly every year, but only when a sufficient number of pearl oysters subsist on the beds.

Burma.

Fresh, dried and saited fish and fish paste. The Delta consists of a series of saucer-shaped are consumed by Burmese people. The Forests

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organibut from 1860 onwards forest organi-sation was rapidly extended to the other pro-vinces. The earlier years of forest administra-tion were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of pro-tecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settle-ment, followed by efforts to introduce pro-tection and some form of regular management. tection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement, and in consequence large tracts of foreshave been saved from ruin and are gradually being brought under efficient management.
Whatever may have been the opinions held
in some quarters half a century ago as to the
need for a policy such as that expressed in Lord Daihousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in ber forests India now possesses a property of constantly increasing value, the future im-portance of which it is hardly possible to overestimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as received, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settle-ment not being prohibited, and the boundaries are not always demarcated; while in the un-classed forests no systematic management is attempted, and as a rule the control amounts secompted, and as a rule the control amounts sea coast and along tidal creeks. These occur on the to nothing more than the collection of reverve characteristic trees belong to the mangrove until the areas are taken up for cultivation of are converted into reserved or protected forcets. total area. This was classed as follows: Reserved 107,753: Protected 6,263; Unclassed State 135.694.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baiuchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on varia-tions of cilmate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

- (1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (Acacia arabica), which however in the driest regions exists only by the aid of river inundations.
- (2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.
- (3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himslayan tract, and the moisture parts of Burma are characterised by the great variety and luxuriance of their vegetation.
- (4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (Pieus khasya) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalays the chief timber tree is the deodar (Cestrus deeders), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (Pinus srceles); towards its upper limit the deodar merges into very large areas of spruce and sliver fir, while below it are found extensive forests of the long-needled pine (Pinus longifotis) which is tapped for regin.

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely :--

- (a) Forests the preservation of which is emential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.
- (b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the tesk forests of Burms, the sail forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalava.
- (c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.
- (d) Pasture lands .- These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forestais also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer in its own province. The Constitution of 1935 included Forests in the Schedule of Provincial subjects throughout India.

Territorial charges.-The various provinces: are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions. in charge of members of the Imperial or Pro-vincial Forest Service; these Divisions in most (2) The Indian Forest Engineering cases correspond to civil districts. Each Division Service.—This service was created in 1919 but by Foresters.

Non-territorial changes. -- Apart from territorial changes there are various important po of a non-territorial nature connected Forest Research and Education, the prepara-tion of Forest Working Plans, and other special duties.

The Forest Service.—The Forest Service comprises three branches:-

- (1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 379 officers consisting of the Inspector-General of Forests, chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 281 have been recruited direct to the service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules.
 - (a) by nomination in England in accordance with such supplementary regulations as may be prescribed by the Secretary of State in Council:
 - (b) by competitive examination in India in accordance with such supplementary regulations as may be prescribed by the Governor-General in Council;
 - (c) by direct appointment of persons selected in India otherwise than by competitive examination :
 - (d) by the promotion on the recommendation of local Governments of members of the Provincial Forest Services
 - (e) by the transfer of promotion of an officer belonging to a branch of Government Service in India other than Provincial Forest Service.

Further recruitment to the Indian Forest Service, whether by promotion or direct appoint-ment, has been suspended until a decision is reached on the recommendation of the Services Sub-Committee of the Indian Round Table Conference in regard to the provincialisation of the Indian Forest Service.

In Bombay and Burma, where Forests in 1919 became transferred subject new services called the Bombay and Burma Forest Services Class I, were created to take the place of the Indian Forest Service.

contains a number of Ranges in charge of since 1922 no further recruitment has been made contains a number of Ranges in charge of since 1922 no nurses recruitments has been made junior members of the Provincial Service or Some of the Forest Engineers have been transfor Forest Engineers are been transfor Forest Engineers as sometimes divided into Service of Engineers and some have realigned Subdivisions. The future strength is divided into a number of beats or protective, not expected to remain at more than the contains a substantial by Forest Canada as a some hard to contain the contains a substantial by Forest Canada as some case there were contained to the contains a substantial by Forest Canada as the contains the contain divided into a number of beats or protective not expected to remain at more than charges held by Forest Guards or in some cases three, i.e. (one each in Bombay, Madras and Puntab).

consisted of Extra Deputy and Extra Assistant it could be regarded as established on a safe and Conservators of Forests. All Extra Deputy Conservators who were considered to be fully equalified to hold a major charge were transferred to the Indian Forest Service in 1920.

The class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators fixation of the strength of the The only. fixation of the strength of the personnel of the service rests with the local Governments.

Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926, the Provincial Service course ceased to exist from 1928. The I. F. S. College was also closed down at the end of Oct. 1932 as a result of the stoppage of recruitment to the Indian Forest Service and as a measure of economy.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 1,500). The Rangers have Guards (about 11,500). The Rangers have hitherto since 1919 been trained at three College at other than centres-the Forest different Dun (for provinces other Burma, Central Provinces, Bibar the Orissa, Bombay and Forest School and Madras), the Burma Pylnmana for Burma, and the Madras Forest College at Colmbatore (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912 respectively. The training of subordinates below the rank of Banger and training classes.

The whole problem of the organisation and training of Forest Officers was thrown into the melting pot by the 1935 Constitutional reforms and has not yet been settled. Recruitment for the Indian Forest Service having ceased, because Forests have become Provincial, the Provincial Governments have to take measures for filling appointments as members of the old I.F.S. through retirement and otherwise cease to hold them. As Forests cannot properly be divided into Provincial watertight departments a system of all India organisation of training and service may be resuscitated, but that could only be done through provincial co-operation and the new Provincial Governments have not yet had time to consider the matter.

Dehra Dun Forcet College.—The Forest College at Dehra Dun completed the sixtysecond year of its existence in March 1939. As a result of the economic depression and consequent retrenchment it was closed for two years in 1933, owing to the reduced demand for Forest Rangers from the Provinces.

The Provincial Service.—Formerly It Introduction: it must become naturalised before permanent basis.

> The hopes of Sir Dietrich have to-day been largely realised. All over India, the executive charge of ranges and even divisions is now being held by students of Dehra Dun or the daughter college at Coimbatore, and students of the College have become heads of the Service in other parts of the British Empire.

> During these 62 years the area under the control of the Forest Department has increased from about 18,000 square miles in 1877 to about 250,000 square miles, which is nearly 28 per cent. of the whole area of British India. Over 100,000 square miles are reserved forest, permanently given to the production of timber. The whole area of 250,000 square miles has been surveyed and demarcated, and nearly 73,000 square miles are under properly sanctioned working plans.

> In 1887 the crudest form of selection was the only form of forest management possible. day, there are available detailed tables of yield and volume, and much knowledge of the sylvicultural requirements of individual species has been accumulated. Forests have been provided with a network of roads and firelines.

Speaking of the progress made during these years, Mr. C G. Trevor, the Inspector-General of Forests, at the reopening of the College in 1935, said that forestry as developed in India was the equal of that in any other country in the world. of subordinates below the rank of Ranger Sylvicultural systems quite different from any-is carried out in various local forest schools thing existing on the Continent of Europe had been developed to meet India's particular needs, and while most countries deal with a very limited number of species, forestry in India was concerned with every type of vegetation, from tropical rain forest to temperate coniferous forcet

Research.-For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful conomic working. A com-mencement in organized forest research was at the instance of Sir Sainthill Eardley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. The Forest Research Institute, is under the administrative control of the Inspector-General of Forests who is also the President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each from the Provinces.

The College owes its origin to a memorandum submitted in September 1887 by Sir Dietrich Brandis, the first Inspector-General of Borests to the Government of India, in which is urged the desirability of creating a national Forest School in India, with the object of papering students for the executive charge of a range ton and of enabling Forest Rangers to qualify for indian experts who have received special promotion to the superior staff. Forestry, he said, must cease to be a subject of foreign and America. hranch being in charge of a research officer.

Forests. 673

As a result of Mr. R. S. Pearson's long and able administration of the Forest Economic Branch, the Government of India now have at Dehra Dun a series of forest workshops and experimental laboratores without parallel anywhere else in the world and official reports show that the value of the experimental work done in them is daily exemplified by the unending stream of inquiries received from persons doing business in timber and other forest products, not only in India but elsewhere in the world. The officers in charge of this branch received their training mostly in Europe and America and their afficiency is of a very high order.

Since 1006 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings have been built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this, steady progress has been made in the investigations which should uitimately lead to the fuller and better utilization of the raw products produced by Indian forests.

Forest Products,—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, truits, fibres, grass, gums; resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources averages about 350 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras by utilising modern American methods to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The provincial Government after this experience adopted a more cautious policy.

An important measure for the development of forests in the Andamans was sanctioned by the Government of India. Hitherto, elephants had been employed for extraction of timber, with the result that only the fringe of the forests could be touched. The new plan is for the employment of American methods, American logging machinery was purchased and an American expert engaged to take charge of the work. Owing, however, to the wide-spread depression in the timber trade the employment of mechanical methods for the extraction of timber had to be suspended. Eisewhere in India a great part of the trade in tumber lies in the hands of contractors who are regarded as on

the whole trustworthy if sufficient control over their operations is maintained.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized.

If accurate estimates were available for India, they would nodoubt show that part from the jungle population which is directly dependent on the forests and the large numbers of woodcutters, sawyers, carters, cartiers, ratismen and cothers working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheel-wrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, bastet-makers, and many other classes of skilled labourers. The indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting soven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The growth of forest revenue, expenditure and surplus during the past 70 years has been steady. Gross revenue, before the recent world wide depression caused a temporary disorganisation of all trades steadily increased until it amounted to some Rs. 6 crores a year, surplus revenue amounting to upwards of 40 per cent. of gross revenue. Most of the provinces ordinarily show a steady increase of surplus.

Agencies.—An agency has been established in India by the Government of India for the said of Government timber. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. This trade has not yet been raised to a satisfactory level, because, according to the official explanation, "the intense conservatism in Ruglish timber trade and the difficulty of obtaining a footing for little known timbers have combined to make satisfactory sales very difficult".

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun. U. P.

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Badio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Vicercy on 23rd July 1927.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India, has become merged in the new company now known as Cables and Wireless Ltd. The Indian Radio Telegraph Company has taken over the working of the cables at Bombay and Madrus, and is now known as the Indian Radio and Cable. Communications Company Ltd. The same Company also works a direct wireless service between Bombay and Tokio, which was opened in 1937.

The inland wireless stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. The wireless installations at Karaohi and Calcutta have been modified so as to meet all the wireless requirements of alteraft passing over India. New stations equipped for aeronautical communication purposes have been erected at many places for the purpose of providing constant communication with aircraft in flight, the most up-to-date system having been installed.

The Indian coset stations have been maintained in a state of high efficiency and many improvements effected. The high-speed continuous-wave wireless stations at Madras Fort and Mingaladon (Rangoon) have proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is requisity worked by this direct route instead of the circuitous route via Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

In December 1936 a radio-telephone service was opened between Madras and Rangoon, by means of which telephonic communication can be obtained between all places in India connected to the trunk telephone system and many places in Burms. This service involved the construction of a large amount of new and upto-date apparatus both at Madras and at Rangoon.

For many years the Bombay station known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Crus, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burms continue to increase in number, and total many thousands per annum. Telegrams are also passed by wireless between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon.

Safety at Sea.—A noticeable feature of wireless development during recent years has been the provision of direction-finding apparatus at Bombay, Calcutta and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All ships equipped with wireless direction finders will now be able to obtain knowledge of their whereabouts at a considerable distance from the coast. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea. An elaborate system of radio services in connection with civil aviation has been developed especially for the assistance of aeroplanes along the airmall routes between Karachi and Saingapore and between Karachi

Radio-Telephone Service.—An event of considerable importance was the inanguration of the radio telephone service between India and England on May 1, 1923, when His Excellency Sir Frederick Sykes, the then Governor of Bombay, and Sir Samuel Hoare, the then Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for several years by the Indian Badio and Calile Communications Company between India and the United Kingdom and India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, until it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world. Similarly, there was a gradual extension of the area covered in India, and every important city in India can be placed in telephonic communication with England and the rest of the world.

Many technical problems are involved in the 'stantial funds for the purpose. A specia perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest ease, but later "secrecy gear" was installed.

Any private telephone owner can use the service for an overseas call. Before doing so, however, he has to place a deposit with the Telegraph Authorities.

Liberal allowance is made at the discretion of the observing operator for periods during which speech is unsatisfactory owing to any defect in service, so that the time charged for is the period of effective speech only. (Allowance is made in charging for calls when atmospheric conditions prevent continuous effective conversation.)

Broadcasting.—For several years, limited broadcasting services were maintained by Badio Clubs in Calcutta, Bombay, and Madras, and although the transmitting sets employed by them were of very low power, the broad-oasts were popular. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta, the services at the former being inaugurated by His Excellency the Vicercy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of one and a half kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

Indian State Broadcasting Service.—
The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Communications Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairsant the Member

inducement for the expansion of broadcasting was the constant growth of revenue from Customs duties on imports of wireless material. This showed on the one hand a widespread desire on the part of the public for further broadcasting services and on the other hand a prospect of substantial profits to Government through the increase of imports of wireless apparatus.

The first important development ordered by Government was the opening of a high-power medium-wave broadcasting station at Delhi. This station was actually opened on 1st January 1936. Its wave length is 340 metres (882 kc/s). The wavelength was somewhat inconveniently close to that of Bombay, but at the time when the station was erected it was believed to be the best length of mediumwave for transmissions in India. It was therefore appropriated for the first high power station to be built. The Bombay wavelength has since been changed.

The Government of India decided to appoint a Controller of Broadcasting in India and secured from the British Broadcasting Corporation Mr. Lionel Fielden, who took up his duties in 1935 and was largely instrumental in the initial organization of the new Delhi station.

Government, in announcing their determination to open a large broadcasting station in Delhi, intimated that they proposed to follow this by the installation of modern high-power transmission equipments in place of the existing plants in Bombay and Calcutta and that a similar modern station would be opened in Madras. The thorough investigation of general broadcasting problems throughout India which broadcasting problems throughout india which followed the arrival of Mr. Fielden led to a revision of these plans, and through his instrumentality the British Broadcasting Corporation lent India in the early months of 1936 the services of Mr. H. L. Kirke.

valuable report was presented by this official, a plan for wide extension of broadcasting activities was elaborated. Government engaged Mr. C. W. Goyder, one of the foremost wireless, and particularly short-wave, engineering experts in the world, to be their principal engineer for construction and research work. Orders for extensive new equipment for implementing plans for expansion prepared by these experts were placed in December 1938. It includes new 10 k.w. short-wave transmitters for Bombay and Calcutta and one 10 k.w. and one 5 k.w. short-wave transmitters for broadcasting and experimental work in Delhi. It also includes a 10 k.w. short-wave transmitter for Madras, for service throughout the Madras Presidency, and a 200 watt medium-wave transmitter for Madras City. All this apparatus will be of the most modern type. This will make for economy in working with the Departmental officials, to keep them in touch with public opinion. The committee has as its chairman the Member of the Viceroy's Executive Council in charge of the subject.

Government, availing themselves of an improvement in their financial condition, in considered of great importance, as it will provide a measure of service for the whole of india. The medium-wave transmitters are improvement in their financial condition, in considered of great importance, as it will provide a measure of service for the whole of india. The medium-wave transmitters are intended to give a first-grade service on incident of give a first-grade service on incident of wing to atmospheric conditions in India their broadcasting service and allocated subexpected to provide a first-grade service at Licences.—Broadcast receiving licences are distances more than 30 to 50 miles from the issued at Head Post Offices at a fee of ten rupees special areas for which they are intended.

His Excellency the Marquess of Linlithgow, the North-West Frontier Province. Licences for immediately after taking the oath of office as lived stations for transmitting and experiviceroy in New Delhi on 18th April 1936, mental purposes are much sought after, proceeded to deliver a broadcast address to the Princes and people of India. This remarkable innovation in procedure is regarded as indicating the number of traders in wireless apparatus. The number of traders in wireless apparatus that Excellency's arbusiasm for broadcasting. His Excellency's enthusiasm for broadcasting who are required to take out special import and to portend that he will show considerable licences has increased considerably during the interest in its development.

per year, and cover the use of receiving sets throughout British India except Baluchistan and past year.

BROADCASTING STATIONS AND TRANSMITTERS.

There are now eight All-India Radio Broadcasting Stations in India employing 13 transmitters. By the end of 1939 another A. I. R. Station, at Dacca, will be added.

The following are the A. I. R. Stations -

Station.	Power in kW.	Call Sign.	Frequency in kc s Waveleng- ths in metres.	Station.	Power in kW.	Call Sign.	Frequency in ke s	Waveleng- ths in metres.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the admi-distration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same dewithin seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper. The Times, which came into existence only five years later in 1785; but then the period of British supremany is not much langer. only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, The Bombay Herald, followed next year by The Bombay Courier, a paper now represented by The Timus of India with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of The Heroid.

The first newspaper was called The Bengal Gazette which is better known from the name of its founder as Hicky's Gazette or Journal. Hicky like most pioneers had to suffer for his Hicky like most pioneers had to suffer for his anterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. The Indian Gazette had a career of over half a century, when in 1833 it was merged into the Bengal Harkars, which came into existence only a little later, and both are now represented by The Indian Daily Nesses with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the were amagamated in 1600. No lewer than five papers followed in as many years, the Bengal Gazette of 1780, and one of these, The Calcutta Gazette, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of and omean commenced the publication of John Bull in the East, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to The English-man by the famous Stocqueler in 1836.

rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellcaley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Slik Buckingham, one of the ablest and best known of Angio-Indian journalists of those days, availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who tem-porarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe, who succeeded for a brief period Bentinek, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the Bombay Tisses which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the Times of India. The Bombay Gazette founded in 1791, ceased publication in 1914. lations which were not enforced, though Lord

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian isnguage was the Samachar Darpens started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the Bombay Samachar which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From its commencement the press was judicially watched by the authorities, who to other sities like Delhi, Agra, Gwallor, and put serious restraints upon its independence and pursued a policy of discouragement and confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily influence and also circulation was satisfactory. controlled by the Gagging Act which Canning Famous journalists like Robert Knight, James passed in June 1857 on account of the license Maclean and Hurris Mookerji flourished in of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in, 1858, an ers of prosperity and progress opened for the ers of prosperity and progress opened for the meerut, but alterwards at airs and their as whole country in which the press participated. Ambaia After a lively existence for a few There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native acquired and incorporated the Mojuszitte, papers and the circulation of all was very small, and in 1876 the office of the paper was transferred. The number of the former did not show a great from Simia to Labore, and the Gazette began rise in the next generation, but the rise in to be published daily.

Maclean and Hurris Mookerji flourished in this generation. The Civil and Military Gazetts was originally published in Simia as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the Mofussitie, originally published at Meerut, but afterwards at Agra and then at

INDIAN PRESS LAW.

Before 1885 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act rerused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutlay, there was no further legislation directly affecting the Press until 1878 when the Varnation of the Press and the Press of t affecting the Press until 1878 when the Verna-cular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1998 of section 124A of the Penai Code in its present form, which had been originally enacted in 1870. in 1870, and by the introduction into the Penal Code of section 158A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incidement to Offences) Act was passed which dealt with papers inciding to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty. to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to public servants or private intimidate

view (i) Control over presses and means of publication; (ii) control over publishers of 13, 14 and 15 of the Press and Registration or newspapers; (iii) control over the importation into British India and the transmission the provisions of Section 16 of the Press Act by the post of objectionable matter; (iv) the about the repression of sections or objectionable repressions of section of Section 16 of the Press and Registration or repression of sections or objectionable and Registration of Section 16 of the Press and Registration or section 16 of the Press and Registration of section 16 of the Press and Registration or section 16 of the Press and Registration 16 of the Press

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begue to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending :-

- (1) The Press Act should be repealed.
- (2) The Newspapers Incitements to Offences Act should be repealed.

(8) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and oivil responsibilities: (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (e) local Governments should retain the power of confiscating openly seditions leafets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The secutious cuaracter of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 121A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (e) any Individuals.

The different sections of the Act have in abould do so in the local High Court; (f) the view (i) Control over presses and means of term of imprisonment prescribed in Sections 12, publication; (ii) control over publishers of 13, 14 and 15 of the Press and Registration of

Press Association of India.—At the only of 1915 this Association was formed in Bombay. According to the articles of all other purposes of mutual help and processitution. "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities to interfere with the free exercise of their calling by journalists and press properetors, and for all other purposes of mutual help and processing the processing of the second their calling by journalists and press properetors, and for all other purposes of mutual help and processing the processing the process of their calling and press properetors, and for all other purposes of mutual help and processing the process of the processing the process of the processing t

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amaigamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a rapprochement on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks:—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As com-pensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches.

The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was re-moved from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable pro-perty or upon promiseory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full ness of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited,

This system continued with only minor nodifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India:—Under the Imperial Bank of India Act of 1920 as amended by the Amendment Act of 1934 which comes into force at such date as the Central Government may by notification in the Official Gazette of India appoint, the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of:—

- (a) the presidents, vice-presidents and the secretaries of the Local Boards;
- one person elected from amongst the
- members by each Local Board;
 Managing Director and a Deputy
 Managing Director appointed by the Central Board:
- (d) not more than two non-officials, nominated by the Central Government.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Central Government shall nominate an officer of the Crown to attend the meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 31 crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 112 crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank been paid up. The Reserve Fund of the Bank is Rs. 5,55,00,000 and the Balance Sheet of Sist December 1938 showed the deposits Rs. 81,50,94,830, and Cush Rs. 8,98,97 nt. 8,98,97,841 with a percentage of cash to liabilities of 11.02.

Agreement with Reserve Bank of India:--The Bank has entered into an agreement with the Reserve Bank of India which will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provialons contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are:

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of

pay to the Imperial Bank of India as remunera-tion a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent. on the first following payments: 250 crores and 1/32 per cent, on the remainder of the total of the receipts and disbursements dealt with annually on account of Government. In Schedule 1, Part 1, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are:—

(1) Advancing money upon the security of:-(a) Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India.

Securities issued by State aided Railways, notified by the Central

Government.

Debentures, or other securities issued under Act, by, or on behalf of a district or municipal board or under the authority of any State in India.

(d) Debentures of companies with limited liability registered in India or elsewhere.

- Goods, or documents of title thereto. deposited with, or assigned to the
- Goods hypothecated to the Bank

against advances. Accepted Bills of Exchange or Pro-

(A) Fully paid shares of Companies with limited liability or immovable pro-perty or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, if authorised by the Central Board, in 'g.'

(2) Selling of promissory notes, debentures, stock-receipts, bonds, annuities, stock, shares, securities or goods or documents of title to goods deposited with or assigned to the Bank

as security for advances.

(8) With the sanction of the Provincial Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of sibilities of at least two persons of firms unconseasonal agricultural operations or six months nected with each other in general partnership. in other cases.

negotiable securities.

Peshawar City. Poona. Poona City. Porbandar. Purnes. Quetta. Raipur. Rajahmundry. Rajkot. Rampur. Rangoon. Ratlam (Sub-Branch). Rawalpindi. Saharanpur. Salem Sargodha. Secunderabad. Shillong.

Sholapur.

Sialkot. Simia. Sitapur. Srinagar (Kashmir). Sukkur. Surat. Tellicherry Tirunelveli. Tirupur. Trichinopoly. Trichur. Trivandrum. Tuticorin. Ujjain. Vellore Vizagapatam. Vizianagram. Wardha. Yeotmal.

(5) Investing the Bank's funds securities referred to in (1) a, b, c and d.

(6) Making, issuing and circulating of bank post-bills and letters of credit to order or otherwise than to the bearer on demand.

Buying and selling gold and silver. (7)

(8) Receiving deposits. (9)

Receiving securities for safe custody. (10) Selling and acquiring such properties as may come into the Bank's possession in satisfaction of claims.

(11) Transacting agency business on commission and the entering into of contracts of

indemnity, suretyship or guarantee.
(12) Acting as Administrator, for winding up estates.

(13) Drawing bills of exchange and granting

letters of credit payable out of India.
(14) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases.
(15) Borrowing money upon security of

assets of the Bank.

(16) Subsidizing the pension funds of the Presidency Banks; and (17) Generally, the doing of the various kinds of business including foreign exchange business.

The principal restrictions placed on the business of the Bank in Part 2 are as follows :-

- (1) It shall not make any loan or advance :-(a) For a longer period than six months except as provided in clauses 3 and
 - 14 above;
 (b) upon the security of stock or shares
 of the Bank;
 - (c) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

- (3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several respon-
- (4) Discounts cannot be made or advances (4) Drawing, accepting, discounting, buying given against any security not being a security and selling of bills of exchange and other in which a trustee may invest trust money under the Indian Trusts Act, 1882.

The Balance Sheet of the Bank as at 31st December 1938 was as follows:--

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports

and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as reands the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing to the butance sheets latest available of the undernoted Banks will give some idea of this :-

LIABILITY OF BILLS OF EXCHANGE RE-DISCOUNTED AND STILL OF RENT. Chartered Bank of India, Australia and China 8,893,000 Eastern Bank, Ltd. Hongkong and Shanghai Banking 347,600

Corporation 3,352,000 Mercantile Bank of India, Ltd. 2,660,000 National Bank of India, Ltd. 2,681,000 P. & O. Banking Corporation, Ltd. 1,855,000

14,790.000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also. but it may safely be inferred that bills drawn in

India form a very large proportion of the whole. The bills against exports are largely drawn at three months' sight and may either be "clean' or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount house and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are

the principal:-

 Proceeds of import bills as they mature.
 Sale of drafts and telegraphic transfers payable in Lordon and elsewhere out of India.

(8) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.

(4) Imports of bar gold and silver bullion. (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on business in India as it appears from the latest available Balance sheets :-In Thousands of £.

INDIAN PRIVATE BANKERS AND SHROFFS.

India private Bankers and Shroffs flourished (point that the assistance of the Banks is called in India long before Joint Stock Banks were thought of, and it seems likely that they a number of the bills they already hold to the will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecuatious people, but this is hardly fair to the present of the strength of the drawers. The extent to which any one shroff may great ascident of the usiness community and of were great assistance to Banks in India. Under the present conditions the Banks in India. Under present conditions the Banks in India. Can never before a three transactions, and (2) the extent to which the Banks are prepared to discount bills bope to be able to get into sufficiently close Indian private Bankers and Shroffs flourished point that the assistance of the Banks is called hope to be able to get into sufficiently close bearing his endorsement. The shroffs keep in touch with the affairs of the vast trading com- very close touch with all the traders to whom munity in India to enable them to grant accom-modation to more than a few of these traders modation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommedation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shop-keeper in the baraar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroft, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Bs. 2,500 each. A boonder usually drawn at a currency of about 2 months is almost invariably taken by the shrofts in

The shroffs keep in they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in. The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1%%, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business

is not so keen in these places as it is in Bombay. The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers respect of such advances.

A stage is reached however when the demands change business throughout India, but there is on the ahroffs are greater than they are able to no doubt that this is done to a very considerable meet out of their own money, and it is at this extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its and advances on other securities or discounts own Bank Bate, and the rates were not uniform.

After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the yhole of India until the 4th of July 1935 when the right to fix the official Bank rate was exertised as from one-half to one per cent. over the official rate; but this does not always apply the right to fix the official Bank rate was exertised as from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Banks can demand learn against Government securities only in the cocommodation is granted at the official rate or even less.

The following statement shows the awares. Bank Pates during the last 12 years:—

ent shows the average Bank Rates during the last 12 years :-

1929		 Year.	1	lat Half-year.	2nd Half-year.	Yearly average
	1928 1929 1930 1931 1932 1938 1934 1936 1936	 	 	6.878 6.508 6.785 6.022 3.627	5·788 5·277 7·363 4·038 3·5	6.888 5.892 7.044 5.027 3.668 8.5

BANKERS' CLEARING HOUSES.

The duties of settling Bank are undertaken by the Balances due to the creditor Banks In the Reserve Bank at Calcutta, Bombay, Madras and Rangoon and by the Imperial Bank at accounts with the settling Bank so that the Colombo and Karachi and a representative of final balances are settled by cheques and book each member attends at the office of that Bank entries thus doing away with the necessity for on each business day at the time fixed to deliver cash in any form.

The principal Clearing Houses in India are all cheques he may have negotiated on other those of Calcutta, Bombay, Madras, Bangoon, members and to receive in exchange all cheques Colombo and Karachi, and of these the first two drawn on him negotiated by the latter. After are by far the most important. The members all the cheques have been received and delivered at these places consist of the Imperial Bank, the representative of each Bank advises the Reserve Bank most of the Exchange Banks and settling Bank of the difference between his English Banking Agency drms, and a few of the total receipts and deliveries and the settling better known of the local Joint Stock Banks. Bank thereafter strikes a final balance to satisfy No Bank is entitled to claim to be a member itself that the totals of the debtor balances as of right and any application for admission to agrees with the total of the creditor balances. a Clearing must be proposed and seconded by The debtor Banks thereafter arrange to pay two members and be subject thereafter to ballot the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts turn arranges to pay on receipt of those amounts

The figures for the Clearing Houses in India above referred to are given below :-

The Railways.

The history of Indian Bailways very closely method of construction, the Government reflects the financial vicissitudes of the country. Secured sanction to the building of lines by Not for some time after the establishment of direct State Agency, and funds were allotted Not for some time after the establishment of Railways in England was their construction for the purpose, the metre-gauge being adopted in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Ranigani (120 miles), were from Calcutta to Raniganj (120 miles), the East Indian Raliway; Bombay to Kalyan (32 miles), Great Indian Peninsula Raliway; Bombay to Kalyan (32 miles), Great Indian Peninsula Raliway; Bombay to Kalyan (32 miles), Great Indian Raliway; Bombay to Kalyan (32 miles), Madras (33 miles), Madras (34 miles), Madras (34 miles), Madras (35 miles), Madras (35 miles), Madras (36 miles), Madras (37 miles), Madras (37 miles), Madras (38 miles), Madras (serious scale dates from Lord Daihousie's great the Southern Mahratta (1882); and the Assam minute of 1852; wherein, after dwelling upon Rengal (1891) were constructed under guaranthe great social, political and commercial address, but on easier terms than the first comthe great social, political and commercial advantages of connecting the chief cities by rail, be suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Governectors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely feit. As there was no private capital in India available for railway north-Western. The Bengai Central, and the Bengai private capital in India available for railway North-Western. The first became bankrupt, construction, English Companies, the interest on whose capital was guaranteed by the State, and the Tirkut Railway had to be leased to the fourth. A step of even greater imwere formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninthe East Indian; (2) the Great Indian Peninsula; (3) the Madrae; (4) the Bombay, Baroda and Central India; (5) the Sastern Bengal; (6) the Indian Branch, later the Oudh and Robilkund State Easilway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22d. to the rupee; the Railways were to be sold to dovernment, on fixed terms at the close of twenty-five years and the Government were to every ave years and the Government were to exercise close control over expenditure and work-The early results were disappointing. It the Bailways greatly increased the Whilst the whilst the Hallways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the

and the limit thankay into the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Gov-ernment guaranteed the interest on 830 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4.255 miles were opened, of which all save 45 were on the broad-gauge; during the next 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial case. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjedh incident, which brought Great Britain and Russia to the verge of war, necesitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Hamai and Bolan Passes were enormously Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period-the system of rebates. Instead of a gold subsidy, com-panies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent, but the rebate was limited to 20 per cent, of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barai make profits sumerint to meet the guaranteed were the terms strictly addressed to. I the Daris interest. Some critica attributed this to the Light Railway, on the two feet six inches gauge, unnecessarily high standard of construction entered the field without any guarantee, and adopted, and to the engineers' ignorance of with rolling stock designed to illustrate the lecal conditions, the result was that by 1869 carrying power of this gauge. The rebates the deficit on the Railway budget was Rs. 1861 terms being found unattractive in view of the lakhs. Seeking for some more economical competition of 4 per cent. trustee stocks they were revised in 1896 to provide for anothe traffic, both passenger and goods.

and are now prepared themselves to find the g 813,000 in 1922-23. capital required for the construction of extensions or branches to existing main line systems.

They have also announced their readiness to from the following statements: consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrange-ments have already been made with Local Governments in Madras, Punjab, Burma and Bombay.

Railway Profits begin.

Meantime a much more important change until the return of prosperous years.

was in progress. The gradual economic de

* The contribution to General Revenues due for the year 1932-38 amounts to Rs. 528 lakes or 13 lakhs less than in 1931-22. The payment of the contribution has been held in abeyance

1983-84 is the first year to show some signs. The possibilities however of this construction of recovery since the depression. The earnings being undertaken have improved considerably of the State-owned lines increased from Rs. 84 recently and a detailed survey is being carried crores in 1932-33 to Rs. 86 crores in 1933-34 out. There does not exist any through rail and to Rs. 95.48 crores in 1936-37; but the net connection between India and Burma, although result of the year's working showed a gain several routes have been surveyed; the mounof Rs. 121 lakhs.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent, dividend guaranteed at 22d. per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium, The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuitles, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway this became a State line; but it was re-leased to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2.700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital of the Goral bridge and the completion of the debt of the Indian railways in order to counter-improvements at Hardwar Station. balance the loss during the period when the revenue did not meet the interest charges. Government Control and Re-organisation According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

of trunk lines. But with the completion of checks and counterchecks established, leading the Nagia-Mutra line, providing an alterine broad-gauge route from Bombay to Department of the Rubile Works native broad-gauge route from Bombay to Department of the Government of India. As Delhi through Eastern Eajputana, the trunk traffic developed, the Indian Ealivays outsystem was virtually complete. A direct broad-gauge route from Bombay to Sind is contracts expired, and the interests of Governmedded, but the poor commercial prospects of met and the Companies synchronised, it became the line and the opposition of the Eao of Cutch act of the Companies synchronised, it became to any through line in his territories, has for is 1901-02 Mr. Thomas Eobertson was deputed some time kept this scheme in the background, by the Secretary of State to examine the whole

tainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to taken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metro-gauge systems of Northern and Southern India will also probably one day be con-nected and Karachi given direct broad-gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided the open lines altogether overshadowed the be provided.

During 1986-37 the principal open line improvements were the protection works for the improvements were the protection works as the Hardinge bridge E. B. Ry., the renewal of girders on the Goral bridge E. B. Ry., improvements to Hardwar Station E. I. Ry., also to Howrah Station, the remodelling of certain yards and permanent way renewals.

The principal improvements to open line during 1937-38 were the continuance of the regirdering

of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure Improving Open Lines.

These changes induced a corresponding and expenditure after the lines were open for change in Indian Railway policy. Up to traffic. For these purposes a staff of Consulting 1900 the great work had been the provision Engineers was formed, and a whole system of of trunk lines. But with the completion of checks and counterchecks established, leading

question of the organization and working of the indian Railways, and be recommended that existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improve-ment of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general aupervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board subjected to excessive control by the WAS Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of com-plaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Incheape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Rallway Board should all be men of large experience in the working of railways due to the importance of fluancial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of

- (a) the directly controlling authority of the State-worked systems aggregating 18,490 miles in on the 31st March 1929,
- (b) the representative of the predominant owning partner in systems aggregating 29,451 miles.
- (c) the guarantor of many of the smaller companies, and
- (d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of develop-ment, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Italiway Board is solely responsible-under the Covernment of India-for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the with effect from 1st April 1923. person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineer-ing questions it has had to depend on outside a sistance. The disadvantages of this arrangeassistance. The disadvantages of this arrange-ment have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appoint-ment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity central carried out on rallways and to undertake work on the many forms of rallways publicity which can be best organised by one central body led to the loauguration of the Central Publicity Bureau success which has attended the work of this Bureau led to its being made permanent from January ist, 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch uccessive the organisation of a new branch in the Rallway Board's office and to the appointment in 1929 of a third member whose main duttes are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board, therefore, consisted of 5 Directors, 5 Deputy Directors, a Secretary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers. the Central Publicity Officer and his assistant and the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other Statemanaged railways during 1929. The supervision of Accounts Officers was placed under a Controller of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management.

Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation. State-managed lines have generally adopted the divisional organisation.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Account Office, and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Aegounts Work, no definite decision has yet been arrived at.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 unier the title of the Indian Railway Conference was the other than the other approximation. ence Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful Work.

The Indian Gauges.

The standard gauge for India is five feet The Bullways managed by Companies have six inches. When construction was started Boards of Directors in London and are represented in India by an Agent. Some of thought advisable to have a broad-gauge in the Company-managed railways are still on a dreet to resist the influence of cyclones. But departmental basis with a Traffic Manager, in 1870, when the State system was adopted

it was decided to find a more economical gauge, contracts. The Government of India, however, for the open lines had cost £17,000 a rolle, expressed themselves as being so convinced by After much deliberation, the metre-gauge of the almost universal failure of this method in 3 feet 34 inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2'-6' and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

State versus Company Management.-The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point their mem-bers being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyoud the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governmenta and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on \$1st December 1924 and of that of the Great Indian Peninsula Railway on 80th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recom-mending the placing of the East Indian Railway and the Great Indian Peninsula Railway under and the Great Indian Peninsula Railway under of the company, was acquired and its manage-State management at the close of their present ment taken over by His Exaited Highness th

other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne-out by the fact that Indian railways have contriout of the fact that indian railways have controlled 4 million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1½ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Rallway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Bohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Poninsular Railway followed suit. The Naini-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st, 1929, the contract with the Burma Railways Company was terminated Burma Rallways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Rallways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net capital province of the set capital contributions. the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on by the lat January 1930. It is estimated that the financial result of the purchase which cost approximately Hs. 703 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-Generalin Council:—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways.

- (1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.
- (2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penuitimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.
- (3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—
 - (a) forming reserves for,
 - (i) equalising dividends, that is to say, of accurring the payment of the percentage contribution to the general revenues in lean years,
 - (ii) depreciation,
 - (iii) writing down and writing off capital,
- (b) the improvement of services rendered to the public,
 - (c) the reduction of rates.

- (4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.
- (5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.
- (6) The Italiway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways."

This resolution was examined by the Standing Finance Committee in September and introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. Instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only rd of the excess over 3 crores were to be transferred to the Rallway Reserve and the remaining ird was to accrue to General Revenues. the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advi-Fory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Rallway and the G. I. P. Rallway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores

for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the conomic depression the matter has been held in abevance.

Re-organisation problems.-The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Rallway during 1922-23.

The Pope Committee.

During 1932-33 a Committee under the Chairmanship of Mr. Pope, General Executive Assistant to the President of the L. M. S. Railway, was formed to investigate and inaugurate a detailed analysis of every important activity of railway operation. In addition to the specific recommendation that "job analysis" should be initiated on all railways.

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of Mr Pone's second report were :-

- Intensive use of locomotives.
- Intensive use of coaching stock.
- Intensive use of machinery and plant.
- Uneconomical wagons.
- 5. Combining resources between railways.
- Handling and transport of small traffic and of traffic to be transhipped at break of gauge stations.
- Ticketless travel.
- Methods of increasing earnings.

Job analysis was continued on most of the railways during the year which resulted in substantial economies. Apart from this, Railways continued to explore the possibilities of increasing earnings and reducing working expenses.

Indian Railway Enquiry Committee.

As a result of the recommendation of the Public Accounts Committee the Indian Railway Enquiry Committee was appointed in October 1936. This Committee was under the Chairmanship of Sir Ralph L. Wedgewood, C.B., C.M.B.. Chief General Manager of the London North Eastern Railway. Its terms of reference were:

To examine the position of Indian Stateowned railways and to suggest such meaof the general budget,

- (i) to secure an improvement in net earnings' due regard being paid to the question of establishing such effective co-ordination between road and rail transport as will safeguard public investment in railways, while providing adequate services by both means of transport; and
- (ii) at a reasonably early date, place railway finances on a sound and remunerative basis

The report was submitted in June 1937 and duly considered by the Railway Board. Early action was taken to implement such of the recommendations as could be accepted without further examination. Where special investigation was considered necessary this was arranged for.

Rates Advisory Committee.

The Railway Rates Advisory Committee continued its functions as in the preceding years. During the period under review four cases were under consideration. On one case the Government of India passed orders and the other three were still under enoughy at the end of the year.

A vigorous and active policy in this direction was fully maintained and several new investigations were undertaken Among these were the subjects: Paints, Dynamometer Car, Analysis of wagon defects. Heated Bearings problems, Wagon door lenkages, Corresion tests, Locomotive movements, Welded wagens, Stresses in track, Heat treatment of crossings, Reconditioning of fish plates, etc., etc.

Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G. I. P. Rallway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Phore Ghat Reversing Station.

Note on Publicity (1937-38).

The outstanding feature of the year 1937-38 was the very remarkable increase in enquiries answered and itineraries prepared for intending tourists by both the New York and the London Offices

As regards New York the figures show an increase of 113 per cent. In the case of the number of itineraries furnished, 137 per cent, in the case of the number of people covered by such itineraries and 144 per cent, in the total railway value of the itingraties prepared.

As regards London, although under the two first heads the increases were small, the actual value of the itineraries showed an increase of 41 per cent, as compared with the previous year.

World Cruise traffic suffered from the Sino-Japanese war, as some of the extra ships which the travel firms had hoped to engage, had to be sures as may, otherwise than at the expense cancelled. Nevertheless, three ships visited India and the financial result, although lower than in the previous year, was satisfactory, these results being

Earnings Rs. 2.32.020-1936-37. Earnings Rs. 1,99,102-1937-38.

Class Traffic .-Third -Three festivals engaged the attention of the Bureau. These were :-

The Rath Jatra at Puri.

(ii) The Kartiki Mela at Garhmukhtesar. The Kumbh Mela at Hardwar. (iii)

As regards (i), the results showed a considerable improvement in the traffic, amounting to 28 per cent. in passengers and 24 per cent. in earnings over the previous year.

As regards (ii), there was also an increase of nearly 12 per cent, in passengers and an increase of 13 per cent. in the earnings over the previous the far Eastern situation, still remained year.

As regards (iii), the Kumbh Mela was the subject of very intensive propaganda, involving not only all the usual methods of dissemination of information, but also the use of eroplanes for dropping leaflets, canvassing from village to village over an area of nearly 30,000 sq. miles. and the use of loudspeakers. The press rendered great help in this connection and Cooperated with the Central Publicity Bureau. The results obtained were extremely gratifying, as the attendance to the Mela was a record one, amounting to almost double the attendance of the last Mela 10 years ago.

Publicity material generally was still widely distributed and the demand for this, in spite of normal.

The tonnage of and earnings from the main commodities on Class I Railway during the last two years are shown in the table below :-

Commodity.	1936-	37.*	1937	Increase +

(b) Out of the total of 3,370 persons killed, 2,817 or 84 per cent, were other than passengers and railway servants and of this number 2.120 were trespassers, 495 were reported to be suicides and 73 were killed on railway premises otherwise than during the movement of trains, vehicles, etc. As compared with the previous year, the increase of 217 in the total number of passengers, railway servants and other persons killed was principally under the heads "accidents to trains" (111), "trespassers" (77) and "other accidents" (29).

Advisory Committees on railways in bringing policy followed :to the notice of their respective railways administrations matters affecting the general public in their capacity as users of the railway. These committees have been established and are functioning on all Class I Railways, except His Exalted Highness the Nizam's State Rallways and the Jodhpur Railway. During the year eighty meetings of the various Committees were held.

Fire. Damage by Earthquakes, and Cyclones.—The year under review was a fortunate one in that beyond the usual floods, cyclones and other natural accidents the resulting damage of which was relatively small there were no major cataclysm to contend with.

Amenities for Passengers.—Railways have of carriages, a been steadily and systematically pursuing their class carriages.

Local Advisory Committees.—In the Annual policy of effecting improvements making for Reports by the Railway Board on the working the greater comfort and convenience of passenof Indian Railways, references are made each gers to the fullest extent to which funds are year to the work that is being done by Local available. The following indicate broadly the

- services. Additional wherever run and timings changed to suit the changing needs of passenger traffic and greater recourse was had to the provision of light trains giving more frequent and rapid service on certain sections;
- (b) Conveniences. Programmes were drawn up and worked to for the provision of additional waiting rooms and halls, covered and raised platforms, separate refreshment rooms for Hindus and Mahomedans and vendors' stalls :

Arrangements for the supply of drinking water were improved, and special action taken to ensure the washing, cleaning and disinfection of carriages, and particularly latrines in third

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is con-structed on the metre-gauge, starts from Chitta-the purchase price was fixed at £11,685,681. gong and runs through Surma Valley across the North Cachar Hulls into Assam. It is worked under a limited guarantee by a company.

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a the Tintu State Italiway. In 1890 this line was leased by Government to the Fengal and North-Western Railway, Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Katihar and the East Indian Railway at Boustes and Mokameh Ghat.

Bengal-Nagpur.

The Bengal-Nagpur Rallway was commenced as a metre-gauge from Nagpur to Chhatisgarh in the Central Provinces in 1887. company was formed under a guarantee which took over the line, converted it to the broadgauge and extended it to Howrah, Cuttack and Ratis and stonded to flowers, cucas and Kathi. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year transferred to it and in the same year sanction was given for an extension to the goal-fields and for a connection with the Branch of the Rast Indian Rallway at Hariharpur.

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guarantoed rallways. It was commenced from Surat rac Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputanawas terminable in 1880, but the period was explicit inc undertaken in india. It was proceed to 1965; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Aluttra, giving broad-gauge connect with the Nagda-Aluttra, giving broad-gauge connect with the Hastern Rajputana with Delhi the working was entrusted to this Company.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on company without any Government assistance to the metre-gauge of the line system was begun in 1874 as the Ganges to the foot of the Himalayas on the Tirlut State Railway, in 1890 this line the Way to Darjeeling. These two portions was leased by Government to the Pengal of the line were amalgamated in 1884 into one State Rallway.

East Indian.

The East Indian Rallway is one of the three railways sanctioned for construction as experi-mental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Ranigan). It gives the only direct access to the port of Calcutta from North ern india and is consequently fed by all the large railway systems connected with it. Is 1880 the Government purchased the line paying the share-holder by annuties, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhund railway was amalgamated with it.

Madras and Southern Mahratta Railway.

The Madras Railway was the third of the original railways constructed as experimental times under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and re-leased to a large Company called the Madras and Southern Mahratta Railway Company.

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Alutan and Lahore and from Karachi to Kotri. The interval between Kotri and Karachi to Kotri. The interval between Kotri and that was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of his by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peahawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated withese two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-westline of the Madras Railway. Between Tutkorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon viz Raimeahwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the ist of January 1908,

INDIA AND CEYLON.

The possibility of counceting india and Ceydon by a railway across the bank of sand extend at present would not be remunerative. This ing the whole way from Rameswaram to Mannar would start from Chittagong, which is the nas been reported on from time to time, and since 1895 various schemes having been suggested.

The route runs southwards through the route runs southwards through the control of Assam.

The South Indian Rallway having been extended to Dhanusikodi, the southernmost point of Rameswaram Island, and the Ceylon Government Rallway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand banknown as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the suth indian Italiway Company, and the project contemplates the construction of a coase way from Italians kied to Talianamar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.36 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces af feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains dening being aunk well into the sand or reinforced concrete will be slipped into position, the bottom slabs being aunk well into the sand of the sea bottom. Lastly, the space cuclosed by the slabs will be filled in with and the slabs will be filled in with and

The top of the concrete work will be carried on a feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will emise the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

Indo-Burma Connection.

The raids of the Euden in the Bay of Bengal thinly populated. Only one range of bills in 1914, and the temporary interruption of communications between India and Burma, a stimulated the demand for a direct railway comment accepted the position and appointed ment accepted the position and appointed Mr. Richards, M. Inst. Q.B., to be the engineer-in-charge of the surveys to determine the best in-charge of the surveys to determine the best incute for a railway from India to Burma. The

at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assau. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about of miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the rallway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrals northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Maniper route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong Valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Mani-pur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of bills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty

COAL.

Most of the coal raised in India comes from Singareni in Hyderabad, and in Central Prothe Bengal and Bihar and Orissa—Gondwana vinces but there are a number of smaller coal-fields. Outside Bengal and Bihar and orissa the most important mines are those at another.

Provincial production of Coal during the years 1936 and 1937.

Average		0,21,00,101		2 12 3		.,	3 1 11	

In 1931, 1932 and 1933 there was a continuous decrease in production of coal from the peak figure of 23,803,048 tone in 1930. In 1934 the direction of change was reversed and production increased by 2,268,284 tons (or 11.4 per cent.) from 19,789,163 tons in 1933 to 22,057,447 tons in 1934. In 1935 the increase continued but at a less rate, by 959,248 tons (or 4.3 per cent.), to 23,016,695 tons. In 1936, however, there was again a decrease by 405,874 tons (1.8 per cent.) to 22,610,821 tons, followed, however in 1937 by an increase of 2,425,565 tons (10.7 per cent.) to 25,036,386, the higher output yet recorded. This increase was shared by all Provinces except Bengal and the Central Provinces, which showed slight decreases. The increased output of 10.7 per cent. in 1937 was accompanied by an increase of 25.0 per cent. in the total value of the coal in India from Rs. 6,24,98,404 8) in 1936, to Rs.7,81,02,439 produced £4,699,128) (£5,872,364) in 1937.

There was an increase of 5 annas 8 ples in concentration of work. During recent years a the pit's mouth value per ton of coal for India large number of collieries have been shut down as a whole, namely from Es. 2-12-3 to Es.3-1-11.; and the labour absorbed in the remainder: this

Increase in value was recorded from all provinces with the exception of Assam, the Central Provinces, Eastern States Agency, Hyderabad and Rajputana. In opposition to the trend of 1934, 1935 and 1936, the exports of coal from India in 1937 have more than doubled as compared with 1936, deducting Burma's share. Since the separation of Burma on the 1st April, 1937, it appears in these statistics as a foreign country, and in 9 months has taken a little more than Ceylon did in the year.

The average number of persons employed in the coalieled during the year showed an increase of 7.2 per cent. The average output per person employed showed a decrease from the high figure of 130.2 tons in 1934, which is practically the same as the figure for 1929, namely 130.4 tons, the highest figure recorded, to 128.50 tons in 1937. All the figures for the last eight years are higher than those previously recorded; these higher figures are due partly to an increased use of mechanical coal-cutters, and partly to concentration of work. During recent years a large number of collieries have been shut down and the labour absorbed in the remainder; this

concentration permits of a proportional reduction which accounted for 209 and 85 deaths of the supervising staff, resulting in a larger respectively. These figures may be compared tonnage per head. There was a decrease in the with the annual average for the quinquennium number of deaths by accident from 274 in 1985, Ass in 1986, to 218 in 1987. In 1985 there were for the quinquennium 192-1928, which was 274, the annual average three major accidents, at Loyabad and Bagdigi 218, and the annual average for 1920-1988, collieries in the Jharia coalfield and at Kurhurbaree colliery in the Giridih coalfield, in which thousand persons employed in 1987; the 11, 19 and 62 lives, respectively, were lost; average figure for the period 1919-1923 was in 1986 there were two, at Poidlh in the 1 38, for the period 1924-1928 was 1·16, and Raniganj field, and Loyabad in the Jharia field, for the period 1929-1933 was 1·08.

1919-1923, which was 274, the annual average

IRON ORE.

Bengal and Bihar and Orissa are the only pro- into the interior of the deposit show that the vigous in India in which iron ore is mined for hamatta becomes very friable not far below the amelting by European methods. Iron amelt-ing, however, was at one time a widespread in-dustry in India and there is hardly a district away from the great alluvial tracts of the Indus. Ganges and Brahmaputra in which slag hears are not found. The primitive iron smelter finds no dimoulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster would regard as worth his serious consideration. Barly attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the Barakar Iron-Works was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Ranigani stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hema-tite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Baniganj and are now obtaining most of their ores from the Kolhan Estate, Singh-bhum. Some years ago the Bengal Iron and Steel Co., Ltd., secured two deposits of bron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Nota Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Burn, a portion of Notu Burn, the deposit has been a portion of Note Bure, the deposit has been opened up, and now feeds the Barakar iron work. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the exist-euce of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded homatite-jaspers. The Rs. 10 per tor ore track is high-grade mioaccous homatite Rs. 40 per tor often lateritised at the outcrop. Gross-cuts manufacture.

outcrop. In fact the characteristics of this ore. including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Gos and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hæmatite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

For some years up to and including 1929 the production of iron-ore in India had been steadily increasing; India is now, in fact, the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still completely dwarfed by the production in the United States (30) million tons in 1935 and 48‡ million tons in 1936) and France (32.3 million tons in both 1935 and 1936): but her reserves of ore are not much less than three-quarters of the estimated total in the United States and there is every hope that India will eventually take a much more important place among the world's producers of iron-ore. From 2,430,136 tons in 1929 the output of ironore in India fell to 1,228,625 tons in 1933. 1934, however, there was a turn of the tide and the production recovered sharply to 1,916,918 tons, and in 1935 rose still further to 2,864,297 tons, in 1936 to 2,553,247 tons, and in 1937, to 2,896,258 tons valued at Rs.46,88,082 (£852,487).

The Steel Industry (Production) Act 1924 (Act No. XIV of 1924).—authorised, to companies employing Indians, bounties upon rails and fishplates wholly manufactured in British India from materials wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March, 1927; the industry is, however, protected to a certain extent by the varying tariffs on different classes of imported steel. As a result of a new Act, No. XXXI of 1934, provision has been made for an increase of tariffs by about half over the 1927 rates, or about Rs. 10 per ton *ad valorem* in most cases, or about Rs. 40 per ton in the case of articles not of British

MANGANESE ORE.

This industry was started some thirty closed since the commencement of work in years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked. and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysorevinces, Madras, Central India, and Mysore— the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glaxing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

The catastrophic fall in the production of manganese ore in India from the peak figures of 1927, namely 1,129,353 tons valued at £2,703,068 f.o.b. Indian ports to 212,604 tons with a value of £140,022 in 1932 has been recorded previously. In 1933 the output rose slightly to 218,307 tons but the value fell to £123,171. These are the smallest quantities and values reported since 1901, when the output was 120,891 tons valued at £122,831. In 1905 the output was 247,427 tons valued at £223,432, since when the smallest production was 450,416 tons in 1915 valued at £929,546; whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. In 1934 there was, however, a partial recovery to 406,806 tons valued at ±388,240, further increased in 1935 to 641,463 tons valued at £768,630 and in 1936 to 813,442 tons valued at £1,124,422. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one-twenty-second part of the value of the 1927 production. In fact in none of the major Indian mineral industries have the effects of the slump been so seriously felt as in the manganese industry; it is gratifying, therefore, that some measure of recovery can now be recorded, though the value of the output is still less than half the peak figure of 1927, with a much higher value.

The substantial recovery in 1936 is due mainly to increases in the Balaghat, Nagpur and Bhandara districts of the Central Provinces, and to the resumption of work in Panch Mahals. The output from Sandur State fell by a third. The most pleasing feature of this improvement the most pleasing resture of this improvement in the recovery of the Central Provinces pro-tis the recovery of the Central Provinces pro-tis the recovery of the Central Provinces pro-tis the industry as a whole had arrived at a stage duction from the trivial figure to which it had fallen in 1932 (28,789 tons) to 568,806 tons in 1936. During 1932 and 1933 the majority of mines in the Central Provinces had been closed, including several mines that had never been industry of the world.

1900 and 1901; there had been a total cessation of production in the Nagur district and almost total cessation 'n Bhandara. The amount of ground still to be recovered can be judged from the fact that the production of the Central Provinces averaged 660,559 tons annually during the quinquennium 1924 to 1928.

The partial recovery of the Indian manganese industry during 1934 and 1935 was reflected in an increase of exports, including the quantities exported from Meynungao in Portuguese India, from the nadir of 375,904 tons in 1933 to 864,698 tons in 1935. In 1936 this fell to 742,547 tons but rose to 1,151,834 tons in 1937. The United Kingdom with an increase of some 53,000 tons kingdom with an increase of some 53,000 tons retained her position as the chief importer of Indian manganese-ore. The second place as importer was taken by France with an increase of some 92,000 tons, with Japan as third with an increase of some 70,000 tons; Belgium showed an increase of 75,000 tons and the United States 34,000 tons.

The fall in the Indian output of manganeseore of recent years can be correlated with the ore or recent years can be correlated what the fall in the price of first-grade ore, c.i.f. United Kingdom ports, from an average of 22.9d. per unit in 1924 to 14.9d. per unit in 1929, and then to 9.5d. per unit in 1932 and 1938, whilst the partial recovery in output in 1934 accompanied a rise in the average price to 10.5d. per unit, to 12,26d, in 1936 and to 22,5d, in

This continued fall in the price of manganese ore from 1924 to 1932 is to be correlated with the fact that from 1924 to 1927 the rate of increase of the world's production of maganese-ore was much greater than the rate of increase in the world's production of pig-iron and steel.

And although there was a fall in the world's output of manganese-ore in 1928, there was a very large increase in 1929, greater than was justified by the increased production of iron and steel in that year, and it is evident that the world's available supplies of manganese-ore are now much in excess of normal requirements. Russia is able to place large quantities of ore on the market at a price with which many Indian producers cannot compete without a return to pre-war railway freights. The Gold Coast has also become a serious competitor of recent years. The large deposits of high-grade manganese-ore discovered near Postmasburg manganese-ore discovered near resumanuary in South Africa are also being developed. With this increasing competition and falling prices it is not surprising, therefore, that in spite of the apparent prosperity of the Indian manganese industry in 1929 and 1980, as judged from figures of production and export, yet by 1980 the industry as a whole had arrived at a stage

GOLD.

The greater part of the total output of gold it was no in India is derived from the Kolar gold field quantity of in Mysore. During the last decade the productive Central Productive Cen tion of this mine reached its highest point in when 616,758 ounces were raised. In 1906 the quantity won was \$65,208 ounces and this figure fell to 535,085 onnces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderahad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2.532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed In 1902 dredging operations Were started on the Irrawaddy river near Myltkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 onnces in 1909, but the Kolar Gold Field during 1937 was 23,881, of iell in subsequent years until in 1922 whom 15,304 worked underground.

it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way

In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330, 488.8 ozs. valued at lts. 2,08,01,943 (£1,540,885), followed by a trivial fall again in 1932, when the output was 320,681.7 ozs. valued at Rs. 2,53,51,438 (£1,906,123). In 1933 there was an increase to valued at Rs. 2,76,40,071 n 1934 the output fell to 336,108.3 ozs. (£2,078,201). In 1934 the output fell to 322.142.9 ozs., but the value increased to 322,142.9 ozs., but the value increased to Rs. 2,92,71,130 (£2,200,836), being the highest in terms of sterling since 1920. It is interesting to note that the output of 1921, which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,722.6 ozs. In 1935 the output rose again to 327,652.5 ozs. valued at Rs. 3,04,01,775 (£2,285,848), and in 1936 to 333,385. 6 ozs, valued at Rs. 3,06,02,413 (£2,300,033). In 1937 the output fell slightly to 331,748.2 ozs., valued at Rs. 3,04,80,105 (£2,291,737).

The average number of persons employed on

SALT. *

There was a considerable increase in the production of salt in India in 1937, made up of large increases in the production in Bombay and Madras, with slight decreases in the production in Northern India and Sind.

The production in Aden was practically the same in 1937 as in 1936; the production in

Burma showed a large increase.

The apparent decrease in the imports of salt in 1937 is due to the exclusion of the quantity of salt imported into Burna during the period April to December 1937, figures for which are not available.

Stock Exchanges.

There are about 475 Share and Stock Brokers in Bombay. They carry on business on the Brokers' Hall, bought in 1887 from the funds of the Share and Stock Brokers' Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Governing Board and approved by The Government of Bombay. The Board has the power to stop business in times of emergencies for 24 hours only and for any further period with the previous sanction of Government. The Oficial address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was its. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased in 1921 a number of cards were sold at its. 40,000 cach and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the

card is about Rs. 20,000.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the Bombay Stock Exchange, Ltd. This separate Exchange no longer functions. It was rovived in 1922. It has ceased to function again. A new Stock Exchange was opened in Bombay with its headquarters in Sir Phirozeshah Mehta Itoad in February 1938, known as the Indian Stock Exchange, Ltd.

For many years the Calcutta Share Market met in the open air in business quarters and was under no control except that of market custom. In 1908 the Calcutta Stock Exchange Association was formed, a Representative Committee came into existence, and the existing customs were focused into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom

In June, 1923, the Association was incorporation to a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Bs. 3 lakins divided into 300 fully paid up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares aubscribed is 223, each firm owning, and being

entitled to own, only one share.

The total number of members, including partners and assistants of member firms, is 608. The Committee has restricted the further sale of new shares until it deems it necessary to revise its decision, exception being made in the case of a partner dissociating from an existing firm. Anyone to become a member is required to purchase a share from a member and seek election and on being elected the admission fee charged by the Association is Es. 5,000. The sonduct of members and of business is controlled by bye-laws, customs and usages being fully homoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and

sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Ealiway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures. The Association issues a Year Book which contains official information relating to all stocks and shares dealt in on the Stock Exchange.

A general meeting of the shareholders annually elects a Committee which elects several Sub-Committees and Hony. Office Bearers—the President and two Joint Hony. Troasurers. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Hon. Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courte in most cases.

Committee for 1939.—J. M. Dutt, President, W. R. Elliot, E. H. Staples, W. A. Black, G. F. Berthoud, Sagarmull Nathany, H. C. Chatterjee, S. R. Mitra, Shambhu Nath Dutt, Gobind Lall Bangur, Mahaliram Sonthalia, Basant Lall, Chaturvedi, Jagannath Jhunihunwala, Bishambhar Nath Chaturvedi, B.A., LL.B.

Joint Honorary Treasurers :- Sagarmull Nathany, B. N. Chaturvedi,

Secretary: -D. Chakravirty, M.A., B.L. Editor, Year Book: -A. K. Sur, M.A.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July 1928, by Sir Stanley Jackson, the Governor of Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. The Mezzanine floor contains the offices of the Association, a well equipped Library and several retiring places for the benefit of the members. The upper three floors are tenanted by members offices.

The Madras Stock Exchange Association in Southern India of brokers dealing in Shares, Stocks and Government Securities. Promoted and Registered on 12th August 1937. It has two kinds of members—viz. Founders and Ordinary. The Founder members have to pay admission fee of Rs.500 whilst Ordinary members pay Rs.1.000. Deposit from each member is Rs.5.000 or such higher amount as the Excoutive Committee may decide. Each member further has to pay menthly subscription of Rs.25. Working hours of the Exchange are between 11 a.m. and 12 p.m. Dealings in about 18 shares of Companies are allowed on Forward monthly basis. Other shares are quoted on cash basis i.e. delivery within seven days.

President,—Mr. C. M. Kothari; Vice-President,—Mr. W. L. Knopp. Registered Office, Madras. Telephone No. 4075.

Chambers of Commerce.

Modern commerce in India was built up by | gress resolved upon the establishment of an merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these cir-cumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership beth Museum and Ruden, but alongwish these both European and Indian; but alongside these have spring up in recent years certain Asso-ciations, such as the Bombay Indian Merchanta' Chamber and Burcau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such any inclination on their part to enter into such
close relationship, because it is generally felt
that the Indian Chambers can themselves
schleve their objects better and more
effectively than a London body could
do for them, and on various occasions
the London Chamber, or the East India
Section of it have shown themselves out
of touch with what seemed locally to be
immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibra-him, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian com-mercial organization. Sir Fazulbhoy's original pian was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas boliday season, in the Town Hall, Bombay. The list of members of the Recoption Committee aboved that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. The late Sir D. E. Wacha, the then President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The ConAssociated Indian Champer of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta, the initiative in the new activities halling, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located."

Among the objects for which the Federation is established are the following :-

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- (b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business.
- (c) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation.
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.
- (f) To undertake and execute any trustathe undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- (q) To draw, make, accept, discount execute and issue bills of exchange, promiseory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

Federation of Indian Chambers of Commerce and Industry

The Federation has more than 60 Chambers of Commerce and Commercial Associations affiliated to it and is recognised by the Central Government as the premier organisation representing commercial and industrial interests in the country. The headquarters of the Federation are situated in New Delhi. There are two classes of Members, Ordinary and Associate, The following are the Office-Bearers for the year 1938-39 :-

President :- Mr. Jamshed N. R. Mehta.

Vice-President :- Diwan Bahadur Ratnasabapathy Mudaliar.

Members of the Committee :- Mr. Kasturbhai Lalbhai, Ahmedabad; Lala Padampat Singhania. Cawnpore; Mr. J. C. Setalvad, Bombay; Mr. N. L. Puri, Calcutta; Mr. A. L. Ojha, Cal-Mr. N. L. Puri, Calcutta; Mr. A. L. Ojina, Calcutta; Mr. Debes Chandra Ghose, Jalpaiguri; Mr. M. A. Master, Bombay; Mr. M. C. Chia, Bombay; Lala Karamchand Thapar, Calcutta; Mr. M. Mohamed Ismail, Madras; The Hou'ble Sir Rahimtoola M. Chinoy, Kt., Bombay; Mr. G. D. Birla, Calcutta; Mr. A. D. Shroff, Bombay; Lala Gurusharan, Lal Gaya. ALL-INDIA ORGANISATION OF INDUSTRIAL EMPLOYERS.

The Employer's Delegations to the various Baroda State Mills and Industries, glass, coal sessions of the International Labour Conference mining, tea, Delhi Factory Owners and jute felt the necessity of a central organisation in India representing employers of industrial labour in the country with a view to studying various ton. The Officer-Bearers of the Organisatic questions coming before these International Conferences from the Indian employers point of view. Mr. Walchand Hirachand, who was the President of the Federation of Indian Chambers of Commerce and Industry, with the consent of the Committee, took the initiative of launching a central organisation in December, 1932, to represent Indian employers. Any organisation representing an industry, constituents of which are employers of industrial labour, is entitled to become a member of the All-India Organisation of Industrial Employers (briefly called A.O.I.E.). Besides this membership, any industrial concern coming under the Factory Laws, is also entitled to become a member of the Organisation.

The annual subscription for the industrial associations is Rs. 25 and for individual industrial concerns Rs. 10.

The Organisation has on its roll 13 industrial associations representing Ahmeda bad millowners, Bengal millowners, Northern India employers, salt industry, national shipping, sugar industry,

Besides, there are more than 100 big The Officer-Bearers of the Organization for the year 1938-39 are :-

President :- Lala Padampat Singhania. Vice-President :- Lala Shri Ram.

Members of the Committee: -G. D. Birla, alcutta; Kasturbhai Lalbhi, Ahmedabad; Calcutta; Calcutta; Assturbna; Laibni, Anmedabed; Walchand Hirachand, Bombay; A. L. Ojha, Calcutta; I. D. Varshnaie, Bahjoi; Adamjee Hajee Dawood, Calcutta; Dr. N. N. Law, Calcutta; Hooseinbhoy A. Laijee, M.L.A., Bombay; The Hon'bie Rai Bahadur Laia Ram Saran Das, C.I.E., Lahore; Mathuradas Vissonii, Bombay; Jadu Nath Roy, Calcutta; Raj Rasna Seth B. D. Amin, Baroda; The Hon'ble Mr. N. E. Sarker, Calcutta,

Co-opted Members: - Jamshed N. R. Mehta. Karachi; D. P. Khaitan, Calcutta; M. C. Ghia, Bombay; Lala Gurusharan Lal, Gaya.

Secretary :- D. G. Mulberkar.

Office :- 28, Ferozshah Road, New Delhi-

BENGAL.

The Bengal Chamber of Commerce was found-in 1834. Its headquarters are in Calcutta. he Bengal Chamber is registered with a Kilburn & Co.): and Mr. A. N. Wardley, (Messrs. he Bengal Chamber is registered with a Kilburn & Co.). ed in 1834. Its headquarters are in Calcutta.

The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associated) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office-bearers of the Chamber for the year 1939-40:-

President :- Mr. H. H. Burn, Messrs, McLeod & Co., Ltd.

Vice-President: -- Mr. J. H. S. Richardson, Messrs, Andrew Yule & Co., Ltd.

Members:—Mr. J. A. Bell, East Indian Railway; Mr. A. O. Brown, Messrs, Mackinnon Mackenzie & Co.; Mr. H. G. Cooper, M. C. D.C.M., The Burmah-Shell Oll Storage & Distributing Co. And Dutman-Suen Oil Storage & Distributing Co. of (India) Ltd.; Mr. D. R. Kinloch, The Chartered Bank of India, Australia and China; Mr. G. B. Morton, M.C., Messrs. Bird & Co.; Mr. E. B. Pratt, Imperial Chemical Industries (India) Ltd.; Sir James Reld Kay, Messrs. James Finlay & Co., Ltd.

The Secretary of the Chamber is Mr. D. C. Fairbairn. Assistant Secretary, Mr. J. J. B. Sutherland.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The Council of State, -- The Hon'ble Mr. H. G. Stokes.

The Bengal Legislative Assembly .- The representatives of the Chamber on the Bengal Levislative Assembly are:—Mr. F. T. Homan, (The Calcutta Electric Supply Corporation, Ltd.); Mr. P. F. S. Warren, (Messrs, Jessop & Co., Ltd.); Mr. Mr. A. F. Hirtzel, (Messrs, Macnelll & Co.); Mr. L. M. Blomenstok, (Messrs, Pigott, Chapman & Co.); Mr. R. M. Sassoon, (Messrs. M. A. Sassoon & Sons, Ltd.); Mr. W. C. Wordsworth, (The Statesman, Ltd.); and Mr. D. Hendry, (Imperial Chemical Industries (India), Ltd.).

The Calcutta Port Commission .- The representatives of the Chamber on the Calcutta Port Commission are:—Sir George Campbell, M.L.A., (Messrs, Mackinnon, Mackenzie & Co.); Commdr. B. C. Lyttelton, O.B.E., D.S.C., (Messrs, Gillanders, Arbuthnot & Co.) : Sir James Reid Kay, (Messrs. James Finlay & Co., Ltd.); Mr. C. E. L. Milne-

The Calcutta Municipal Corporation,-Mr. E. The Calculus Miniscipul (Orporation,—mr. 4H. Edney, (The Imperial Chemical Industries (India), Ltd.); Mr. A. H. Galloway, (Messrs, Octavius Steel & Co., Ltd.); Mr. J. A. Gloag, (Messrs, Turner, Morrison & Co., Ltd.); Mr. J. H. Lyle, (The Oriental Gas Co., Ltd.); Mr. G. U. Pottinger, (The Burmah-Shell Oil Storage & Chemical Chemical Chemical Control Chemical Chemical Chemical Control Chemical Chem Distributing Co. of India, Ltd.); and Mr. G. S. G. Vernon, (The India General Navigation & Railway Co., Ltd.) are the representatives of the Chamber on the Calcutta Corporation.

The Board of Trustees for the Improvement of Calcutta .- Mr. F. Rooney (Bengal Telephone Co., Ltd.).

The Bengal Boiler Commission .- Mr. R. A. Cole, (Union South Jute Mill); Mr. W. Gow, (Messrs. Burn & Co., Ltd.); Mr. W. H. W. Urquhart, A.M.I. Mech. E., (Andrew Yule & Co., Ltd.).

The Bengal Smoke Nuisances Commission .-Mr. R. J. Oilver: Mr. A. R. Murray.

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:-

Calcutta Grain Oilseed and Rice Association, Indian Jute Mills Association, Indian Association, Calcutta Tea Traders' Association, Calcutta Import Trade Association, Calcutta Import Trade Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Fabrics Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers' Association, Calcutta Baled Jute Shippers' Association, Calcutta Jute Dealers' Association, Calcutta Jute Dealers' Association, Calcutta Hides and Skins Shippers' Association, Calcutta Accident Insurance Associ-Calcutta Flour Mills' Association, Calcutta River Transport Association, the Masters Stevedores Association and the Assoclation of Paint, Colour & Varnish, Manufacturers in India, Calcutta Freight Brokers' Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to cus-toms of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to mem-Robertson, (Messrs, Turner, Morrison & Co., bers as may, from time to time, annually or

otherwise be selected by the Registrar and official returns consisted of 100 officers. The usual willing to serve on the Tribunal. The Re-system of work for the benefit of the trade of the gistrar from time to time makes a list of such port is followed. The Department has its own members and assistants.

The Chamber also maintains a Licensed Measures' Department controlled by a special committee. It includes a Superintendent (G. C. Gee Smyth), Head Office Manager (Mr. F. W. Kendall) and Assistant Superintendents (Messrs. J. B. F. Henfrey, B. Perry and S. J. Warwick) a monthly abstract of pioceedings and mand the staff at the time of the last other circulars on matters under discussion.

system of work for the benefit of the trade of the provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the Calcula Prices Current, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many

BENGAL NATIONAL CHAMBER OF COMMERCE.

ESTD. 1887.

Office :-- 2. ROYAL EXCHANGE PLACE, CALCUTTA.

Telephone-Calcutta 3932; Telegrams-Conjoint.

The Bengal National Chamber of Commerce. the premier institution of the Indian Commercial representatives to the Bengal Legislative Assem-Community in Bengal, was founded in 1887. The objects of the Chamber are to aid and stimulate the development of commercial Economic Enquir aggicultural and industrial enterprises in Bengal Important bodies. and Assam and to protect the commercial interest of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community; to represent their views and requirements to the Government, railway and port authorities; to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour; to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and (The Bangeswari Cotton Mills Ltd.).

The Chamber has recently organised Industrial Museum for making an effective display of the industrial products of the Province to the best interest of the industries, particularly in the matter of pressing their claim to various forms of Governmental assistance, and also for providing expert advice to those who might be looking for proper guidance in the matter of selecting particular lines of industrial venture.

The constitution of the Chamber extends the facilities of Associate and Honorary Membership to the entire trading community in Bengal. The number of Ordinary members on the roll is about 400. Almost all the leading Indian commercial and industrial firms and persons in every branch of the inland and foreign trade in Bengal are members of the Chamber. A considerable portion of the joint stock capital invested in Bengal in banking, insurance, steamer services, cotton mills, etc., is also represented. The constitution of the Chamber provides for a close association as between the Chamber and various sectional organisations of trades and industries in Bengal.

The Chamber enjoys the privilege of electing bly, the Calcutta Port Trust, the Calcutta Improvement Trust, Bengal Industries Board, Economic Enquiry Board, Bengal, and other

The headquarters of the Chamber are at Calcutta and its affairs are administered by a committee of 32 members in addition to the President, two Vice-Presidents, and the Honorary Treasurer, with the help of the Secretary and a number of Departmental committees.

Office. -- 28, Ferozshah Road, New Delhi,

BOMBAY.

The object and duties of the Bombay Chamber, | contractors, 128 firms engaged in general as set forth in the Memorandum and Articles mercantile business. of Association, are to encourage and promote a friendly feeling and unanimity among com-mercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency to collect and circulate information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance. and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals on all subjects of general mercantile interest; and to arbitrate between parties willing to refer to, and abide by, the decision of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 194. Of these numbers 14 represent banking institutions, 16 shipping agencies and com-panies, 3 firms of solicitors, 3 railway companies. 18 insurance companies, 17 engineers and specific purpose.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is its, 360. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose. but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary consisting of the President members. and Vice-President and seven members. committee as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a

Government of Bombay Board of Communications: G. H. Richmond, Esq.

Bombay University : J. M. B. Gibbons, Esq.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber laits Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clarks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Rombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo cartled by each steamer to and from Lombay.

Four statements are issued once a month. One shows the quantity of exports of colton whole of British India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scartet cloths, printed sad dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives the number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise.

A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 10, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in these certificates the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy Season are on duty early and late.

Associated Chamber of Commerce of India.

HWAD OFFICE LOCATED IN CALCUTTA BOR 1939. President: H. H. Burn. Esa.

Millowners' Association, Bombay.

In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Rs. 1 from a member as payment for the Chamber's Sealed Certificate.

> The Committee consisting of 3 members, cluding the Chairman, is elected by including the Chairman, ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, payable quarterly, and for each member whose place of business is elsewhere is Bs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed and trade movements of the staple exports and into the Department of Commercial Intelligence imports, (q) trade enquiries for securing trade with effect from the 1st December 1922. The introductions, and (h) monthly, quarterly and joint department has its office at No. 1, Council House Street, Calcutta and is administered by the Director-General of Commercial Intelligence and statistics assisted by a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of All-India statistics.

The Government of India felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they established in 1933 the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics at their headquarters. This Bureau has now been placed in charge of the Economic Adviser to the Government of India appointed in 1938 with a Deputy-Director of Statistics Research at the headquarters.

Among the important publications for which the Director-General is responsible are the following annual volumes: --Statement of the Foreign Seaborne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—
the principal features of which are (a)
information as to tariff changes in foreign countries which affect Indian interests, (b) notices of tenders called for and contracts placed by Government departments and public dian trade statistics, (f) market reports, price overseas firms interested in Indian exports.

abroad and Summaries of the leading features of consular and other trade reports.

The Review of the Trust of India and the monthly Survey of business condition in India are now being published by the Statistical Research Bureau.

The Department also administers the COM-MERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Com-mercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the admihas now been expanded into first-class technical library containing over 19,059 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 368 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London, Hamburg, Milan, Osaka (Japan), Mombasa (East Africa), New York and Alaxandria and the Indian Trade Agent, Kabul, with His Majesty's Trade Com-missioners in India and the Dominions, and with Consular Officers in various parts of the bodies, (c) crop reports and forecasts, (d) world. And the yearly increase in its corresponding trade, (e) analysis of Inmore and more both by firms in India and by

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are sures and makes no restrictive or regulative part of the world-wide Commercial Intelligence orders. Briefly, the policy on which it is based Organisation of the Imperial Government. The is the policy of assistance without interference. Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disexpinating it to British manufacturers and exporters; by undertaking such special conditions are stationed exporters; by undertaking such special conditions are stationed in the British Empire are members of the Trade structive activities as may be found possible; (Ommissioner Service while Foreign countries and by assisting traders in the removal of their are served by the Commercial Diplomatic difficulties. The Department has nothing to do Bervice forming part of the British Diplomatic with the regulation of trade. It passes no mea-

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assist-ance in the promotion of British economic interFunction of Commissioner.—The primary call personally or to communicate their requireduty of the British Trade Commissioner comprises the collection of information in regard to poprortunities that may arise within his territory a more extended use of the information for securing and developing trade by British available in the offices and by bringing to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area; to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres; to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade; to make an annual general report on the conditions and prospects of trade in his area; and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department; to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area: and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to

the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

THE INDIAN CENTRAL COTTON COMMITTEE.

Director, Technological Laboratory .- Dr. Nazir Ahmad, O.B.E., M.Sc., Ph.D., P.Inst.P.

Office.-Vulcan House, Nicol Road, Ballard Estate, Bombay.

Secretary .- Mr. D. N. Mahta, B.A. (Oxon.), P.L.S.

Asst. Secretary .- Mr. C. J. Bocarro, M.A.

The Indian Cotton Committee of 1917-18, a full summary of whose report appears on pages 201-294 of the Indian Year Book of 1922, reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to should be established to promote the welfare of the eotton-growing industry generally, to advise the Government of India and Local Governments in regard to matters of cotton policy, especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921, and worked as an advisory body until 1928. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton, The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows :-

INDIAN CENTRAL COTTON COMMITTEE MEMBERS.

President.—Sir Bryce Burt, C.I.E., M.B.E., I.A.S., Offg. Vice-Chairman, Imperial Council of Agricultural Research, ex-officio.

(a) The Expert Advisor to the Imperial Council of Agricultural Research in Agricultural matters, ex-officio.

REPRESENTATIVES OF AGRICULTURAL DEPARTMENTS.

Madras .- Mr. P. H. Rama Reddi, I.A.S.,

Director of Agriculture.

Bombay.—The Director of Agriculture. United Provinces .- The Director of Agriculture.

Rai Bahadur S. V. Kanungo, Finance Minister, Holkar State, Representative of the Holkar

Seth Isserdas Varindmal, M.L.A., Representa-tive of the Karachi Indian Merchants' Associa-OF ition.

The Economic Botanist (Cotton) to the Government of the United Provinces, Cawnpore, Jamshed Nusserwanji, Esq., M.L.A

Lala Shri Ram, Representative of the Cotton Millowners of Delhi.

Mr. Chellaram Shewaram, Representative of the Karachi Cotton Association, Ltd.

Dewan Bahadur Sir T. Vijayaraghavacharya, K.B.E.

Mr. Mangesh Babhuta Patel, M.L.A., Shahada, District West Khandesh.

Mr. H. B. Rajdev, Deputy Director of Agri-culture, Karnatak Division, Raichur, Sardar Rao Bahadur Bhimbhai Banchodji Naik.

Dr. T. E. Gregory, Economic Adviser to the Government of India, New Delhi,

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and the Central Provinces and of the Baroda, Rajpipla, Chhota Udepur, Hyderabad, Indore, Sangli, Baria, Lunawada, Bhaderwa, Kadana, Sant, Sanjeli, and Jambughoda States and with excellent results.

The Cotton Ginning and Pressing Factories Act (XII of 1925) authoquently passed provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Bombay and Central Provinces Governments have both passed amending Acts to the Cotton Ginning and Pressing Factories Act making it obligatory on all cotton ginning and pressing factories situated in the areas to which the Act may be applied to take out licenses and prohibiting the watering, mixing or admixture of cotton. The Bombay amending Act has been made applicable to Sind also.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up-country and primary cotton marketing, and the effect of "pools" of cotton ginning and pressing factories on the price paid to the growers for their produce. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of medium staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Octoon trade and of the cotton growing industry, thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research Studentships.—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian Universities to undertake research on cotton problems under the direction of experienced research workers in India. Scholarships for training abroad are also sometimes granted.

Statistics-By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to (1) Indian raw cotton consumed in spinning mills in India, (2) exports by sea and receipts at mills of Indian cotton classified by varieties, (3) stocks of cotton held on the last day of the season by the trade at important cotton centres in India, and by the mills classified by varieties, (4) the Indian cotton crop classified according to staple length, and (5) loose cotton consumed in the spinning mills in British India and Indian States, the establishment of weekly statistical returns relating to the number of bales of raw cotton pressed in India, and the revival of rail-borne trade statistics for cotton are some of the results already achieved by the Committee in this direction. Committee also publishes a report on the accuracy of the All-India Cotton forecasts of each season.

Research.—By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provided Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory undertakes, for the trade on payment, tests on cotton and artificial silk yarn, and acts as the official testing House for the Indian Textile Industry.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants-in-sid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number thirty-seven.

The Committee also assists by means of grants to Agricultural Departments in Provinces and States and to Co-operative Cotton Sale Societies in the wider distribution of seed of improved varieties of cotton. There are 14 such seed distribution and marketing schemes in operation at present. There are also three schemes for maintenance of nuclei of pure seed.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwarl Chamber of Commerce, The Bombay Cotton Morchants' and Muccadums' Association. Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into condict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, 1.0.8. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay

Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October 1932. With effect from 1st November 1932 the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as

follows ---

Sir Purshotamdas Thakurdas Kt., C.I.E., M.B.E., (President); Haridas Madhavdas, Esq., M.B.E., (President); Sellers' Panel; Tulsidas Kilachand, Esq., Buyers' Panel; J. O. G. Barnes, Esq., Buyers' Panel; J. R. G. Buyers' Panel; J. R. Kay, Esq., Buyers' Panel; J. R. Kay, Esq., Buyers' Panel; Bhawanji A. Khimji, Esq., M.L.A., Sellers' Panel; Bhawanji A. Khimji, Esq., M.L.A., Sellers' Panel; B. B. Dalal, Esq., Sellers' Panel; Jamnadas Ramdas, Esq., Sellers' Panel; Begraj Gupta, Esq., Brokers' Panel; Ramdeo A. Podar, Esq., Workers' Panel; Madanalai Paliram, Esq., Brokers' Panel; Madanalai Paliram, Esq., Brokers' Panel; Sardar Rao Bahadur Bhimbhai R. Naik, nominated by the Indian Central Cotton Committee, Growers' Representative; M. P. Kolhe, Esq., M.L.A., nominated by the Indian Central Cotton Committee, Growers' Representative; Sardar Saheb Gur Bachan Singh, nominated by the Indian Central Cotton Committee, Growers' Representative; Dr. W. P. Patil, Msc., Ph.D., nominated by the Government of Bombay, Growers' Representative; K. S. Patil, Esq., M.L.A., nominated by the Government of Bombay, Growers' Representative.

C. M. Parikh, Esq., B. com., Secretary, A. R. Mancaes, Esq., Deputy Secretary and Manager, Clearing House, and S. A. P. Aiyar, Esq., Astatast Secretary.

Some of the objects for which the Association is established are: - To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade; to establish just and equitable principles in the said Trade; to maintain uniformity of control of the said trade; to fix or adopt standards of classification of cotton, to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all market : to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India. improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the Importation of Cotton into India in so far as it may be imported. To bring, prosecute, or defend, or sid in bringing prosecuting, or defending, any suits, actions proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, a large Trading Hall on the lines of Liverpool and New York Exchanges, Survey Rooms, Appeal Rooms, etc.

The Association has another fine Building, "The Cotton Exchange" at the corner of Sheikh Memon Street and Kalbadevi Road, wherein trading in "forward" contracts takes place. It comprises of a basement, a ground floor (Trading Hall) with two galleries and six other upper floors. There are 114 telephone cabins for members on the ground floor and the galleries. The top floor accommodates the administrative offices of the Association and the Clearing House, and the remaining five floors contain 113 rooms for members' offices.

There is a membership of 414 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

Indis has been the home of the cotton trade induced a flow of wealth into Bombay, the from the earliest times. Its cotton, known as great centre of the trade, for which there was white wool, was well-known to the ancients no outlet. The consequence was an unpreceand its cloth was familiar to the West in the days of the overland route. The name Calico "Share Mania," and when the surrender of Lee comes from the fine woven goods of Calicut, re-opened the Southern Ports widespread rule and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

importance with the opening of the sea route, able, 1937-38, the total area in all territories They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw spinners back on India for their supply of raw Bombay, Punjah, the Contral Provinces and material. When the war broke out the ship-ments of Indian cotton were 528,000 bales following table gives the rough distribution but during the last year of the war they aver- of the outurn. The figures are the estimated aged 973,000 bales. Most of this cotton was figures for the past season, and are not exact, sold at an enormously inflated price, and but they indicate the distribution of the crop:—

followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased, The exports of Indian cotton began to assume | For the last season for which returns are availreported on was computed at 25,583,000 acres and the total estimated outturn was 5,663,000 bales of 400 lbs, as compared with 24,759,000 acres and 6,204,000 bales in 1936-37.

Bombay is the great centre of the cotton whole outtain, which still consists for the most trade. The principal varieties are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas, Broach is the best cotton grown in Western India, Hinganghat cotton, from the Central Provinces, has a good repufrom the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangeric valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Colmbatores and Tinnevellys. The best of Tinnevelly. Cambodia cotton has these is been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Govern-ment have also been active in improving the class of cotton produced, by seed selection; hybridisation and the importation of exotic hybridization and the importation of exotic were really laid by the opening of the first mili cottons. Although these measures have met in Bombay in 1856. Thereafter, with occa-

part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701; prohibiting the use of sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry with a considerable measure of success, they slonal set backs from famine, plague and other have not proceeded far enough to leaven the causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 4 years :-

In the early days of the textile industry the higher counts of yarn, importing American energies of the millowners were largely con-cotton for this purpose to supplement the constrated on the production of yarn, both for Indian supply, to erect more looms, and to the China market, and for the handlooms of produce more dyed and bleached goods. This

India. The increasing competition of Japan in the China market, the growth of an indigenous in the China market, the growth of an indigenous in China and the uncertainties introduced by the fluctuations in the China indigenous consequent on variations in the exchanges consequent on variations in the price of silver compelled the millowners to Central Provinces 2:1 per cent. and Madras 2.1 per cent. The general per cent. Grey and Bleached goods represent tendency of recent years has been to spin marily 78:10 per cent. of the whole production. ANALYSIS OF WOVER GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Indian States :-

[·] Year ending 31st August.

Considering its present dimensions, the jute Company. On the working of their first half industry of Bengal is of very recent origin, year, a 15 per cent interim dividend was de The first jute mill in Bengal was started at clared, which seemed to justify the enormous Rishra in 1855, and the first power-loom was capital at which the company was taken over Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to was a tous per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee. the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the uavy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylou, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1858 he got into works, then at Scrampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengai "where the jute comes from and spin it there." This suggestion bore truit, for shortly afterwards Aciand placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in executing and operating the first sist him in erecting and operating the first juve mill in Bengal. This, as has been stated, was at Rishra, the site of the present Welling-ton mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently bappens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that slik firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Id." Four other mills followed in succes-Co., Ld." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute

"From 1868 to 1873," writes Mr. David Waliace in "The Romance of Jute," "the

from the Borneo Company, and shares touched 68 per cent, premium. The dividend for the first year, ending August 1878, was 25 per cent., for 1874, 20 per cent., and for 1875, 16 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally-the locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874—5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now Manufacturing Co. Belliaghatta-Barnagore branch Rustomiee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs, Birkmyre Bros., of Greenock fame in all thirteen new companies, coming on all in all thirteen new companies, coming on an of a heap and swelling the total looms from 1,250 up to 8,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine; Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Fardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—The Gordon Twist Mill with 1,800 spindles (now acquired by Angio-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Seraj-gunge), and the Kinnison. A full of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Bei-vedere, Auckland. Kelvin and Northbrook. wallace in 'the Romance of Jule,' while vectors, Augusta. Kelvin and Nortancious, five mills excepting the Rishra mill simply The last iccade has seen the construction of coined money and brought the total of their Hukumchand, Birla, Shree Hanuman, Gagalbhai, looms up to 1,250." To illustrate the prosperity of the industry at this period we may the exception of the last-named—are under take the dividends paid by the Barnagore Indian ownership,

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The oliwing statement shews quinquennial averages from the earliest year for which complete naturation is available with actuals for each year from 1917-18 up to 1931-32 and the figures a prackets represent the variations for each period, taking the average of the quinquennium rem 1879-80 to 1883-84 as 100:—

[·] Revised.

The production of the mills has increased to a still greater extent. The following figures show he exports of jute manufactures and the declared values for the same periods. The value of the manufactures exported by sea in 1924-25 was over thirty-three times as great as the average time of the export in the period 1879-80 to 1883-84:—

Until the outbreak of war the exports by sea lated the export rade and in 1919-20 the export of raw jute were marked by increases from year showed an increase, as compared with the to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very again made a recovery and amounted to The cessation of the war stimu- 578,000 tons,

The following table shows the exports of raw jute from British India (excluding Burma) every month from 1929-30 :-

(In tons 000.)

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10,

again in 1919-20 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 65 but rose again to Rs. 86. It again declined to Rs. 66. In 1921-22 the price rose to Rs. 73 at the end of September, but fell back again to Rs. 50 at the end of November the price having declined to 35.4 and Rs. 31, fell back again to Rs. 50 at the end of Novembe in 1917-18 it dropped to Rs. 38-8-0 but rose and recovered at Rs. 64 at the close of the year.

The following were the prices for raw Jute, month by month, from March 1938 to March 1939:—

blowing circumstances:—In 1886 the existing mills, finding that, in spite of the constant pening up of new marks, working results ere not favourable, came to an agreement, ith the late S. E. J. Clarke, Secretary to the hamber of Commerce, as trustee, to work tort time. The only mills which stood out this arrangement were the Hooghly and arajgunge. The first agreement, for six onths dating from 15th February 1886, was ibsequently renewed at intervals without break for five years up to February 15, 1891. he state of the market at the time of the newals dictated the extent of the short time. hich varied throughout the five years bereen 4 days a week, 9 days a fortnight and days a week. Besides short time, 10 per nt. of the sacking looms were shut down for short period in 1990. An important feature

The Indian Jute Mills Association now working day was increased to 15 hours, Saturne of the most important, if not the most days included, which involved an additional nportant, of the bodies affiliated to the Bengal mount of cleaning and repairing work on hamber of Commerce, was stated under the Sundays. In order to minimise this Sunday work and give them a free Sunday, an agita-tion was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Govern-ment took the matter up, but their action went no further than applying moral sussion backed by a somewhat half-bearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, more suo, could not trust themselves to carry it out without legislation, Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. A few years ago the Jute Mills Association in despair brought out an American business expert. Mr. J. H. Parks, to advise them on the possithis agreement was a mutual undertaking bility of forming a jute trust with a view to the parties not to increase their spinning exercising some control over the production wer during the currency of the agreement, and price of jute. Mr. Parks, came, and wrote the production were during the currency of the agreement, and price of jute. Mr. Parks, came, and wrote the production of the currency of the agreement. ly a few exceptions being made in the case a report which the Association promptly a few incomplete new mills.

pigeon-holed because the slump was over and working days.—With the introduction of the demand was so prodigious that there was a electric tight into the mills in 1896, the

have been followed by others, differing in points name seem columbed by others, differing in points of detail, but with the same object in view namely the restriction of production. During the past 11 years a policy of curtailment of output has been continuously in force. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent. of the trade, worked during 1982, 1983 and the greater part of 1934 for 40 hours per week, with 15 per cent. of the total complement of looms sealed; and the agreement incorporated a clause which provided that the mills would not instal any extra pro-ductive machinery or relative buildings during the currency of the agreement. The agreement the currency of the agreement. The agreement also provided machinery whereby production could be gradually increased by reducing the percentage of looms required to be kept sealed. The process of increasing production in this way was begun on 1st November 1934, when 2st per cent, of the total complement of looms were insealed, and was continued throughout 1935, a further 2½ per cent, of looms being unsealed on 1st May 1935, 2½ per cent, on 5th August and 2½ per cent, on 11th November. The remaining 5 per cent, of looms were unsealed on the 17th February 1938. Throughout this time the mills, with five exceptions, namely, Premothand, Craig, Waverley, Megna and Nuddea had, by the terms of the agreement, been granted the privilege of working 54 hours per week with a full complement of machinery and all five worked in accordance with the special terms allowed to them. This working agreement between the Association unsealed, and was continued throughout 1935, working agreement between the Association mills, however, in accordance with the requisite notice given in December 1935, terminated on the 31st March 1936 and was super-seded by an agreement, operating from the 1st April 1936, under which the mills were permitted to work up to but not exceeding 54 hours per week on single shift, with no night work.

As in the old agreement, this new agreement incorporated a clause which restricted the mills from installing any extra productive machinery or relative buildings during the currency of the agreement.

Under this agreement the mills' working hours were increased by successive stages until with effect from the beginning of August 1936 all mills in the membership of the Association were working 54 hours per week on single shift. With effect from the 1st March 1937, however, the agreement was suspended indefinitely and the position now is that the mills are at liberty to work whatever hours and to instal whatever extra productive machinery they desire.

In addition to the above working agreements which applied only to the mills in the membership of the Association, an agreement was entered into, with effect from 1st August 1932, with the five principal mills outside the Association, namely, Adamjee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per wesk up to 30 June 1933. With certain modifications this agreement was extended and became a continuing agreement subject to six months' notice of termination being given by atther party, which notice of termination could

The working agreements referred to above not be given before 1st July 1934. On the 30th we been followed by others, differing in points | September 1935 the Association gave the detail, but with the same object in view required notice and the agreement terminated until the restriction of production. During on the 31st March 1936.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent, above that of the previous year, viz., 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent, below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly of Dunkirk), Bussia (via Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent, in the five years ending 1913-14, the pre-war yoar. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The exports now approximates to 955,519 tons. The following table shows the total exports from 1929-30:—

1929-30				 957,955	tons.
1930-31				 766,649	.,
1931-32				 663,618	,,

1933-34				 672,155	٠,,
1934-35				 684,718	,,
1935-36				 801,695	,,
1936-37	(exc	luding 1	Burma)	 1,021,971	,,
1937-38		do.		 1,020,400	,,
1938-39				 955,519	,,

Indian Central Jute Committee.—A Central Jute Committee has been constituted by the Government of India with 24 members. Representation has been found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam.

The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture, which suggested that there should be a committee on the lines of the Indian Central Cotton Committee to watch over the interests of all branches of the jute trade from the field to the factory.

week up to 30 June 1933. With certain modifications this agreement was extended and bearing agreement was extended and bearing agreement subject to six the improvement of crop forecasting, of promonths' notice of termination being given by duction, of testing, and of distribution of the sither party, which notice of termination could proved seed; enquiries and recommendations.

relating to banking and transport facilities and technological research on jute recommended transport routes; and improvement of marketing in the interests of the jute industry.

The Committee will also advise the Local Governments concerned on any points within its prescribed functions which may be referred

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the Deccan hemp plant (Hibisous cannabinus), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to be introduced into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength. it was valued at £18 per ton with Bimlipatem jute at £12 10s., and Bengal first mark jute at £17 per ton. Deccan homp has been grown lairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's rejuirements of hemp were mainly supplied by the following countries in order of importance: the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be O cause Very considerable changes in the char icter of the fibre market. There will probable be labour difficulties, it is thought, in the prepaation of the hemp crops of Russia and Hungary and it is not unlikely that the worldwill look to ountries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt hat one of the early effects of the war was to irm up hemp prices. As far as Indian hemp is oncerned, values were persistently depreciated luring the first six months of 1914 owing to argo stocks held; but the closure of the Russian emp market on the outbreak of war resulted n a marked improvement in values, and there vas a keen demand and a considerable rise in rice. Exports from Calcutta during 1922-28 nade a great recovery from the previous year. The quantity advanced by 37 per cent. from 97.412 cwts. to 269.487 cwts. and the value rom Ra. 26. 93 lakhs to Rs. 36.68 lakhs.

Jute Technological Research.—Good progress on the products as been made on the five year scheme of its products.

by the Indian Central Jute Committee, which proposes to devote a sum of Rs. 1,80,000 per annum for the first three years and Rs. 1,00,000 per annum for the next two.

The Technological Research Laboratories which it is proposed to set up at Tollygunge near Calcutta, will have two blocks of buildings, the first comprising the spinning laboratory manager's office, staff office, sample store and library.

The programme of work to be carried out in the laboratories includes examination of typical samples representing the various physical and chemical characters and trade classifications. In the spinning laboratories an attempt will be made in the beginning to determine the minimum size of sample which will give reliable informa-tion regarding spinning behaviour and yarn quality. It is also proposed to have an investigation at an early date of the influence of certain valuable factors (machine speeds, etc.), on yarn quality in order that the degrees of control necessary in the various operations of a standard process may be determined. When this has been done, a standard process suitable for comparing the quality of small samples of fibre will be available, and it will be possible to proceed with the work of correlating spinning quality with measurable characters and the testing of new strains, etc.

One of the main functions of the technological research scheme is the testing of strains of jute produced by the agricultural research staff of the Committee and samples received from other sources.

The total non-recurring capital cost of the whole project will be about Rs. 3,80,000.

Statistics and Information.—The Indian Central Jute Committee hopes shortly to conclude an arrangement by which the newly appointed Indian Trade Commissioner to the United States of America will supply the Committee with periodical reports on all points bearing on the consumption of jute and jute goods in the North American Continent. Similar arrangements are likely to be made to obtain information from Europe, South Africa, Australia, and the Far East. A correspondent has already been appointed in the Argentine for this purpose.

The purpose of the Committee's scheme for the collection and distribution of statistics and information regarding jute is to collect and make available to the various interests concerned as much reliable information as possible on the production and consumption of jute and

THE WOOL INDUSTRY.

f wool grown in India itself, but of imports om foreign sources, these latter coming into adis both by land and by sea. Imports by a come chiefly from the Commonwealth of ustralia, but a certain quantity from Persia iso comes by land, while the main imports re from Afghanistan, Central Asia, Tibet and lepal. Quetta, Shikarpur, Amritsar and Rs. 84,80,000 as compared to Rs. 60.35,000

Wool exported from India consists not only Multan are the main collecting centres for wool received by land from Afghanistan and Persia whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Atghanisan. Imports of raw wool in 1987-88 amounted to

during 1936-37, while imports of woollen manu- | details are available, was 21 of which four were factures amounted to Rs. 3,30,07,000 com- in the United Provinces. The paid-up capital pared to Rs. 2.05.40.000 during 1936-37.

Exports of raw wool in 1937-38 amounted to Rs. 2.64.56.000, compared to Rs. 2,85,92,000 in 1936-37, and of wool manufactures amounted to Rs. 1,07,81,000 during 1937-38 compared Rs. 90,08,000 for 1936-37.

Production in India .- No definite information is available regarding production of wool.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest in many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with re-spect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

British India in 1935, the latest year for which a high price.

of these mills was Rs. 66,59,842 and the number of looms and spindles was 1,334 and 54,068, respectively. The average number of workers employed daily in these mills was 6,909. There are no complete figures of production, the last year for which they are available being 1921 when the quantity of woollen goods produced was 3,820,879 lbs. valued at Rs. 1,17,99,396, As regards Indian States there were five woollen mills of which four were in Mysore and The population of sheep in India is estimated at about 48 million. A reference in this connection is also invited to the estimate made in Appendix IV (pages 112-113) of the Report of the Indian Tariff Board on the Woollen Textile Indian Tariff Board on the Woollen Textile Indian mills is Indian wool, although it is Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool, although it is the Indian mills is Indian wool. is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the fluer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jalls. Amritsur had a considerable trade at one time in weaving shawls from pashm, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the ma-nufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done Mill manufacture.—The number of mills in entirely on hand looms and the carpets fetch

Silk.

declined for the following reasons :-

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, how-ever, were made to acclimatise in Europe one or two races of a temperate worm, proqued from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have

In the early days of the East India Company the Indian Silk trade prospered greatly, and sahlon has, from time to time, powerfully various sub-tropical races of the Silkworm modified the Indian silk trade. The special were introduced. But the trade gradually appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of handwith reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

India has three well-known purely indigenous silkworms; the tasar, the muga and the eri.
The first is widely distributed on the lower hills, more especially these of the great central table-land, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal and feeds on a laurel. The third exists in a established the belief that the plains of India, state of semi-domestication, being reared on or at all events of Bengal, are never likely to the castor-oil plant. From an art point of view produce silk that could compete with this new the mugasilk is the most interesting and attracproducts and that could compete what this here the may six is the most interesting and attractionalists. On the lower hills of Northern India, it was the other hand, a fair amount of success has eri Silk, on the other hand, is so extremely been attained with this (to India) new worm, difficult to resi that it is nearly always carded as, for example, in Dehra Dun and Kashmir. and spun—an art which was practised in the In Manipur, it would appear probable that Bombys mori, possibly obtained from China, of in Europe.

Indigo.

Indigo dyes are obtained from the Indigofera, another migration of the industry from Lower be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was shipped from Surat. It was carried by the Portuguese to Liebon and sold by them to the dyers of Holland, and it was the desire to obtain a more simple supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Company and so to the East. Opposi-tion to indigo in 17th century Europe was keen owing to its interference with the wood keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revivai. It had no sooner been organised, however, than troubles next arose in Bengal itself through

a genus of Leguminosae which comprises some and Eastern Bengal to Tirhut and the United and warm temperate regions of the globe, india having about 40. Western India may laboratories of Germany these the the chemical be described as the headquarters of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They existing of any natural vegetable dye. They first killed the maddar dye of Europe, then the safflower, the lac and the al dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigor-ously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural versus synthetic indigo.

> According to him, the future of natural indigo is by no means a hopeless one provided steps are taken to realise such improvements as are clearly possible. Indigo soils have deteriorated due to lack of proper manuring. Continual cropping has resulted in phosphate starvation. This can be checked by proper manuring with super-phosphates. Improvements by botanical selection and better business organisation and methods of marketing the product will also aid in hastening recovery.

Decline of the Industry.—Since synthetic indigo was put upon the market in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued misunderstandings between the planters, their 1906-07 and 1911-12, the decline continued until vators and the Government, which may without a break until the revival due to the be said to have culminated in Lord Macaulay's impossibility of obtaining artificial dyes in amous Memorandum of 1837. This led to sufficient quantities during the war.

OILS AND OIL CAKES.

pamphlet on subject published the by the Commercial Intelligence Department points out that it is both economically and ndustrially unsound for India to export her oil seeds instead of manufacturing the olis and oil akes in India. It allows other countries to reap he manufacturers' profits and at the same time leprives Indian agriculture of the great potenial wealth, as cattle-food and manure, conained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufacured in this country by more or less crude

in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundruts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any processes. Village oil mills worked by bullocks proposal to develop in India an oil-milling and presses worked by hand exist in all parts of the country and supply most of the local femand for oil. There has also been a great learned to receive the place, there exist high protective tariffs in a local form of the results have been a great because in recent years in the number of oil from India of the raw material rather than the ailis worked by steam or other mechanical manufactured product. Secondly, there is a lower. These crush all the commoner oil seeds better market for the oil cake in Europe than and development has been especially marked in India and the freight on oil seeds is less than

the freight on cake. and less expensive to transport oil seeds by sea reduced price. His projudices on this poin than it is to transport oil. While this has been have no justification in fact since experts ar the position in the European markets, Indian made oils, other than cocoanut oil, have made than village-made cake. Even when the milenough headway in Eastern markets to cake contains less oil than the village cake of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prethan in India. judiced against the use of machine-made cake as a cattle food or as manure because he constders that it contains less oil and therefore an increasing demand for most classes of less nourishment than the village-made cake. mill cake.

Thirdly, it is much easier | He is therefore unwilling to buy it except at agreed that mill cake is a better food for cattl suggest the possibility of a development there is still more oil in the cake than cattle can of those markets. where it exists, is a drawback and not an advan tage to the use of the cake as food. A consider able amount of demonstration work has been done by the Agricultural Departments Government in order to remove the cultivator's prejudices and there is said now to b

Tea.

Among plantation crops in India tea is the ing and attractive that speculators eagerly rushed most important. The indigenous tea plant, into it. The discovery of the indigenous tea is growing in a wild condition, was first discovered Sylhet and Cachar gave the impetus for an in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern, and to this day the largest company in India. It was anything but prosperous during the first ten years of its existence. But about 1852, its condition began to improve and its success made the prospects of the industry appear so promis- world."

Sylhet and Cachar gave the impetus for a expansion of the industry into the Surma valley and in a few years thereafter the whole of the upper portions of the province of Assam (bot) Brahmaputra and Surma valley) was converted into a huge tea plantation. Thus the foundation of the present tea industry were laid during the fifties of the last century. Since that period th growth of the industry has been phenomenal and in less than a hundred years the British Empir has become the tea garden and tea-shop of the

The following table shows the growth of the industry since 1885:—

		Progress of	the Ind	ustry.		
Year.	Area under tea in '000 acres.	Production in '000,000 lbs.		Yoar.	Area under tea in '000 acres.	Production in '000,000 lbs
1885-89 (average). 1900-1904 1910 1915 1920 1925 1926 1927	5.64	91 201 268 872 845 864 393 391	1928 1929 1980 1931 1932 1983 1984 1935	•••	788 804 807 809 818 826	404 433 391 894 434 384 399 394 895

It will be seen from the above table that during the last sixty years, while the area under centres of the tea industry in India, Assam alone tea has risen by over 400 per cent., the production has increased more than ten times.

Assam and Bengal are the two most important accounting for more than half the total production.

The following table shows the relative importance in 1936 of the various provinces from the point of view of the tea industry:—

	P	TOV	ince.			Ares under crop '000 acres.	Production '000 lbs.	Average daily working strength (permanent and temporary.)

			Total I	ndia		834	\$95,180	873,544

. Less than 500 acres.

Although India produces such large quantities of tea its consumption of tea is comparatively very little, being about 92 million lbs. as com-pared with 468 million lbs. in the United King-dom. The low domestic consumption, however, enables India to export large quantities to other countries, the principal among which is the Unit-ed Kingdom. In 1936-37, 77 per cent. of the total quantity of tea produced in India was exported abroad.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former.

To check over-production a scheme was therethe Legislative Assembly in 1933. During the preceding year.

first year of its operation the hopes engendered by the regulation scheme were, to a considerable extent, justified, and the industry was enabled to meet what were undoubtedly very disturbing conditions. During the year 1934-35 which was the second year of the working of the scheme, the results were however, not so satisfactory. In common with other commodities tea seems to have suffered from the diminished purchasing purchasing power of consumers and the restriction on international trade. A feature of the year was the shifting of demand from the higher to the lower and medium grades of tea.

The export quota for the year 1936-37, the fourth year of the working of the tea restriction scheme was as in the preceding year fixed at 821 per cent. of the standard exports and the year sawa steady recovery from the depressed conditions that characterised the trade in 1934-35. Stocks in the United Kingdom were not much above the normal and amounted to 174 million lbs. at the end of March 1987 as compared with 249 million lbs, at the end of March 1936, and there was a further recovery in prices. fore introduced to restrict production and to Good quality was in great demand and a wide limit exports. A Bill giving legislative effect to difference in price was recorded between good the soleme was passed at the autumn session of land common tea than was the case in the

The following table explains briefly the position as regards the export of tea from India: --

	Ye	ar.				Amount exported (million of lbs.)	Value in lakhs of rupees.
	 	1			j	2	8

The following figures show the proportion of exports of tea from India by sea sent to different parts of the world to the total exports :-

To United Kingdom To Rest of Europe To Asia To America To Australasia To Africa	1928-29 per cent. 83.0 2.0 5.8 5.7 1.6 1.9	1936-37 per cent. 84.0 1.6 5.1 7.6 0.4
	100	100

A considerable quantity of Indian tes imported into the United Kingdom is normally re-exported to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1982-83 the fall in tea prices was almost catastrophic. The average price of tea per ib. realised at the Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31. The position, however, has improved considerably since then.

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11 =100:—

			Average	price at				Average auction

(a) For teas sold with export rights.

Act of 1908 was raised to Rupee one and annas four per 100 lbs. with effect from February 17th, 1937. The total amount of duty collected in 1986-37 was Rs. 22,82,000.

With the exception of male settled labourers, the wages of workers on tea plantations showed

(b) For teas for internal consumption.

The rate of duty under the Indian Tea Cess some improvement during the year 1935-36. Among settled labourers, the average wages of men, women and children in Assam were Rs. 6-9-0, Rs. 5-2-2 and Rs. 3-9-8 respectively as against Rs. 6-11-9, Rs. 4-13-9 and Rs. 3-2-0, respectively in 1934-85.

Coffee.

subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The area under coffee in 1936-87 (including plantations of less than 10 acres) was nearly 190,000 acres, an increase of 25 per cent, over the figures for 1925-26.

The total exports of coffee increased from 150,000 cwts. in 1926-27 to 277,000 cwts. in 1927-28. In 1928-29 and 1929-80 the shipments declined and amounted to 198,000 cwts. and 184,000 cwts. respectively, but exports again rose in 1930-31 and amounted to 293,000 owts. In 1931-32 the shipments declined to 156,000 owts. but in 1932-33 exports again rose and amounted to 173,000 owts. There was a further rise during 1933-34, the total exports amounting to 186,000 cwts. In 1934-35 the exports again declined to 141,000 cwts., but there were no imports of Coffee into India.

Such historical evidence as is available on the | in 1985-36 there was a pronounced rise in the quantity exported which amounted to 216,000 cwts. It, however, again declined to 211,000 cwts. in 1936-37. The principal markets for Indian coffee were the United Kingdom, France and Norway. During 1936-37, the share of the United Kingdom declined from 73,000 cwts. to 35,000 cwts. while that of France increased from 83,000 cwts. to 87,000 cwts. Shipments to the Notherlands and Belgium increased from 1,500 cwts. and 13,000 cwts. to 5,700 cwts. and 20,000 cwts. respectively. Norway doubled her requirements from 17,000 cwts. to 34,000 cwts. Germany and Italy on the other hand curtailed their requirements from 10,000 cwts, and 6,500 cwts. to 7.000 cwts, and 3,100 cwts., respectively,

Not only does India export coffee in large quantities, but till a few years ago it also used to import it, chiefly, from Java, Ceylon and the Straits Settlements, which it used to re-exports to Mascat Territory, Iraq and the Bahrein Islands. During 1936-37,

The following table gives the figures of the production and exports of Indian coffee:-Production and Export of Indian Coffee in thousands outs.

The total production of cured coffee in | 102,908 persons (40,684 garden and 22,142 out-India during the year 1936-37 was 34 side labour permanently employed and 40,082 million ibs. as compared with 41.1 million lbs. during the previous year. The Indian Coffee Coss Act, providing for the creation of a fund to be expended by a Committee specially constituted in this behalf for the promotion of the cultivation, manufacture and sale of Indian Coffee, was passed in November, 1935. It provides for the levy of a customs duty on all coffee produced in India and exported therefrom to any place beyond the limits of British India or to Burma at a rate, not exceeding one rupee per cwt., fixed by the Governor-General in Council on the recommendation of the Coffee Cess Committee. The present rate is 8 as. per cwt.

The daily average number of persons employed in the plantations during 1936-37 was returned at 101,837 of whom 63,797 were permanently at 101,837 of whom 63,797 were permanently in 1930-31. It rose to Rs. 63-6-7 in 1932-33 employed (namely, garden labour 42,950 and but fell to Rs. 55-1-4 in 1933-34. Since then outside labour 20,847) and 38,040 temporarily in the continued to decline the declared value employed (outside labour), as compared with being Rs. 39-11-7 in 1936-37.

temporary outside labour) in 1985-86.

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices. Until the end of 1929 the fall was comparatively slow, but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s, in 1923 and 127s, in 1929 it fell to 86s, in 1930.

The declared value per cwt. of coffee was Rs. 60-11-9 in 1981-32 as against Rs. 65-8-1 in 1930-81. It rose to Rs. 63-6-7 in 1932-38

Sugar.

Indian sugar industry has made phenomenal progress in spite of the economic depression. Besides the duty, various other special advantages—consequences of the depression—have helped the rapid growth of the industry. As a result, India is now the largest sugar producing country in the world. And, the capital invested in the industry is variously estimated at between Rs. 25 and Rs. 30 crores.

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report, the revenue duty was enhanced to Rs. 7-4 per cwt. in March, 1931. In addition, a revenue surcharge of 25 per cent. (amounting to Re. 1-13 per cwt.) was imposed in September, 1931. In accordance with the Tariff Board's recommendations, Government issued a communique on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. of all classes of sugar until March 31, 1938. The total import duty along with the surcharge was Rs. 9-1-0 per cwt. till 31st March, 1934. From 1st April, 1934, the protective duty was enhanced to Rs. 7-12, but the surcharge was reduced to Re. 1-5-0 and made equivalent to the excise duty of Rs. 1-5-0 imposed on internal production. Thus the total import duty remained the same, viz., Rs. 9-1-0 per owt. From the 28th February, 1937, the protective duty was decreased to Rs. 7-4-0, and a surcharge was imposed at the rate of Rs. 2-0-0 per cwt., equivalent to the increased excise duty of Rs. 2 per cwt. on internal producexcise duty of Rs. 2 per cwt, on internal produc-tion from the same date. The total import duty from 28th February, 1937, was Rs. 0-4-0 per cwt. With effect from 1st April, 1939, the protective duty was reduced to Rs. 2-12-0 per cwt. (Rs. 7-12-0 to Rs. 7-4-0 per cwt., allowing for the A Tariff Board Ennuiry was instituted in

Sheltered behind an adequate tariff wall, the tection to be conferred on the industry for the remainder of the period of 8 years. The Tariff Board submitted its Report in December, 1937, but as the Government of India could not complete their examination of the Report before March, 1938, they continued the existing import duty on sugar up to 31st March, 1939. On the 30th March, 1939, the Government of India published the Tariff Board's Report—after a period of 15 months. The Tariff Board had recommended continuance of the protection at the existing rate, viz., Rs. 9-4-0 per cwt. upto 31st March, 1946, but the Government not agreeing with this recommendation, announced their decision to decrease the protection by Rs. 0-8-0 per cwt. pending a further Tariff Board Enquiry in 1940, and passed an Act giving protection to the industry at the rate of Rs. 8-12-0 per cwt. for a period of two years, ending 31st March, 1941, when fresh proposals will be made for determining the extent of protection to be conferred on the industry up to 1946.

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re. 1-5 per cwt. on factory produced sugar was imposed during the financial year 1034-35. Besides, it was proposed to set aside from the proceeds of the excise duty an the amount equivalent to one anna per cwt. to be -4-0, distributed among the provinces "for the purpose of assisting the organisation and opera-tion of co-operative societies among the cane-A Tariff Board Enquiry was instituted in increase in the import duty corresponding to March 1937, for determining the extent of pro-

Area under sugar-cane increased to 4,232,000 acres in 1936-37.

The area under cultivation of sugar-cane import has kept pace with increased production; from 2,677,000 acres in 1929-30, it increased to 4,440,000 acres in 1936-37 but fell to 4,440,000 8,869,000 acres in 1937-38 and to 3,108,000 acres in 1938-39. Prior to 1932-33, there were only 31 cane factories; 25 new factories were added in 1932-33 alone while another 65 new factories were started in the following year-an increase of 400 per cent. in two years. Since 1933-34, about 34 new factories of large cane crushing capacity have been established, and in 1936-37, no less than 137 factories were working. Production of sugar in India may be classified under three main heads-by modern factories working with cane, by modern refineries working with range of the state of the 1931-32, the volume of factory produced sugar has increased by approximately 700 per cent. 1936-37, India produced over tons of sugar, i.e., slightly more During 1,230,000 estimated consumption of about her 1.150.000 tons in 1936-37.

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance, from an average of approximately one million tons in the years up till 1930-31, imports fell by about 45 per cent. in the following year and dropped to about 250,000 tons in 1933-34 and degressed further to 221,000 tons in 1934-35. During 1935-36, imports fell 1934-35. During 1935-36, imports fell 1939, the duty on Khandsari sugar was decreased net import was only 11,960 tons. As a to Re. 0-8-0 per cett, but the definition the state of the state revenue losing from this source.

during 1937-38 is 13,000 ' tons. Because of the heavy duty, the yield from this source diminished from over Rs. 10 crores in 1930-31, to about Rs. 3.81 crores for the financial year ended March 81, 1935, to 8.24 crores for the year ended March 31st, 1936, to Rs. 43 lakhs, during 1936-37, and Rs. 25 lakhs in 1937-38. During 1937-38, the Government realised a revenue of about Rs. 20,00,000 only, excluding Burma from import of sugar. But owing to the shortage of produc-But owing to the shortage of production of sugar in India in the 1938-39 season, owing to shortage of cane, bad cane-crop, due to floods in United Provinces and Bihar. expected factory production of sugar is about 21 lakhs tons smaller than previous years, and about Rs. 8,50,00,000 from import of sugar. The imposition of the excise duty at the rate of Re. 1-5-0 per cwt. on factory sugar, and Re.0-10-0 on khandsari sugar, from April 1st, 1934, has yielded a revenue to the Government Rs. 97,22,000 in 1934-35, and Rs. 1,58,24,000 in 1935-36, and Rs. 2,52,62,000 in 1936-37. the increase in excise duty on factory sugar to Rs. 2 per cwt., and Re. 1 per cwt. on Khandsari sugar the yield during 1937-38 was Rs. 3,81,48,000, on sugar produced in India, excluding Burma,

Since the imposition of the excise duty it is noteworthy, that the Khandsari production net import was only 11,960 tons. As a to Re. 0-8-0 per cwt., but the definition result of dwinding imports Government are of "factory" in the Sugar Excise Duty Act, The 1934, was amended, so as to omit the reference

Factories in Burma and production in Burma, excluded after 1936-37.

to the number of workers employed with a with the definition of 'factory' thus amended view to enable duty being charged even in even with the reduced duty on Khandsari of premises where less than 20 workers are em-les. 0.8-0 per cwt. there will be a revenue ployed. The Government of India expect that of about 18. 6,00,000 during 1939-40.

In view of the astounding growth of the industry within such a short time, the following table of estimate of annual consumption and of the margin for import of sugar into India, up to 1939-40, is of interest :-

	1933-34. Tons.	1934-35. Tons.	1935-36. Tons.	1936-37. (Est.) Tons.	1937-38. (Est.) Tons.	1938-39 (Est.) Tons.	1989-40. (Est.) Tons.

India during the official year	000 757	932,000	1,015,000	1,010,000	1,150,000	1,100,000	1,000,000
Difference between produc- tion and consumption, representing margin for imported sugar entering into consumption during the official year	238,474	216,941	267,782	67,167	80,900	17,800	200,000

During the year 1937, there was a precipitate and Bihar, the higher cost of production due to fall in the price of sugar and in order to avert scarcity of cane, and curtailment of the crushing internal unrestrained competition a Sugar Syndicate was brought into existence, compri-sing over 90 mills. Later in the year, the industry approached the Government for legislative interference with a view to avoid over-production of sugar and to overcome internal unrestrained competition, which brought down the price of sugar to an uneconomically low level. The Governments of the U.P. and Bihar, to whom these representations were made. billist, to whom these representations were made, have passed Sugar Factory Control Acts, and have made it compulsory for every mill to obtain a licence for working sugar factories from the Government. One of the conditions of the grant of licence to a factory has been members the Act and the Control of the conditions of the grant of licence to a factory has been members and the Act and the Control of the co grant of neence to a factory has been membership of the Indian Sugar Syndicate. The Indian Sugar Syndicate has thus been given legislative recognition by the Governments of the U.P. and Bihar, and all mills working in the provinces of the U.P. and Bihar are compelled to sell their sugar through the Syndicate. The Governments of the U.P. and Bihar have also appointed a joint Control Board consisting of the representatives of the U.P. and Bihar Governments, the representatives of the industry, and of cultivators and consumers.

During the year 1937, the Government of India imposed a ban on the export of sugar from India, by sea, to any country except to Burma, for a period of five years.

During the 1938-39 season, the price of sugar rose considerably due to the high price of cane fixed by the Governments of United Provinces

season, and the necessity of importation of foreign sugar. The price of indigenous sugar was also determined by the price of imported sugar at the ports.

It is also of interest to note that the production of gur for direct consumption is increasing since 1931-32.

		gur. (Tons.)
1931-32	••	 2,758,000
1932-33		 3,240,000
1933-34		 3,486,000
1934-35	••	 8,701,000
1935-36		 4,101,000
1936-37		 4,481,000
1937-38	(Est.)	 4,200,000

It may be noted also as a matter of interest that India is the largest producer of sugar among all the countries in the world, the total yield of raw sugar (gur) being 5,275,000 tons. (Vide the Indian Bugar Industry—1988 & 1939, Annual by Mr. M. P. Gandhi.)

The Indian Sugar Industry is now the second largest industry, next in importance to only the Cotton Textile Industry, giving employment to over 100,000 workers.

INDIAN TOBACCO.

The tobacco plant was introduced into India and five curing were started at the Imperial by the Portuguese about the year 1605. As Agricultural Research Institute, Puss, with the in other parts of the world, it passed through definite object of solving the question of the a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of Nicotians are cultivated, but only two are found in India, namely, N. Tabacum and N. rustica. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal more especially the District of Rangpur; (2) Madras, Trichinopoly, Dindigui, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigui in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cierar wranner. Some cigar factories have been cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry,

India ranks with China and the United States as one of the three largest tobacco growing described as follows in an official report:—
"The indigenous varieties of tobacco grown on nearly a million acres in this country give a product which is good enough for the hooka and the biri, but which is not suitable for the manufacture of cigarettes. India requires a tobacco of the colour, flavour and texture of that which is commonly called Virginian. Trials with some well-known American tobaccos at Puss have shown that these exotics can be successfully grown in this country, and that it may be possible to produce a bright cigarette tobacco with the curing methods devised." Before the War some cigarettes were rolled locally from imported leaf but imports of leaf amounted only to a quarter of a million ib.
a year. No cigarette tobacco leaf was grown.
Total imports of cigarettes in 1918-14 were
only 1½ million ib. After the War cigarette
smoking began to extend beyond the European
population and those who had partially adopted
European habits.

Already in 1920 the Indian Leaf Tobacco Development Company, a subsidiary of the Imperial Tobacco Company of India, had been ex-perimenting with American varieties in the Guntur district of the Madras Presidency, and by 1925 had succeeded in producing on a commercial scale a cigarette tobacco, but with a colour (the product was air cured) far short of that desirable in a good cigarette leaf. That Company has consistently continued and extended its efforts and experiments. In 1925-27 experiments, which included comparison of American

definite object of solving the question of the regular local supply of a good cigarette tobacco leaf of the American type. Much progress has been made. Several of the Provinces have also undertaken the work, which since 1934-35 has been co-ordinated and aided by the Imperial Council of Agricultural Research.

Local tastes in cigarettes differ and most of the leaf grown, though acceptable locally, is unsuited in flavour for the cigarette trade of the United Kingdom, But the object of this research and experiment is not merely the partial satisfaction of a local demand. In the past few years a proportion of the cigarette leaf grown in India has been sufficiently good in texture and mild and neutral in flavour to be used in the manufacture of cigarettes in the United Kingdom when blended with other leaf. This is an instance of the beneficial long range results of the grant of preference. A pressing local need set a problem to local scientific agriculture, but the prospect of entry into the United Kingdom market raised by the grant of preference has given to that problem a high and definite standard for ultimate achievement.

In 1928, no Indian leaf was flue-cured. Imports of unmanufactured leaf and cigarettes each amounted to 5 million lb. In the three years 1934-85 to 1936-37 these imports only averaged 3 million lb. and three-quarters of a million lb. respectively. No detailed figures of the local respectively. No detailed figures of the local production of eigarettee are available. But it is estimated that in 1935 over 2,000 flue-curing barns were in operation and 13 reconditioning plants; that 46,000 acres were planted with seed of Virginian types and another 65,000 acres with indigenous types and crosses producing leaf which could be used in the manufacture of cigrattee for local communition. cigarettes for local consumption; that 30 million lb. of leaf were used locally in the manufacture of cigarettes, and that whereas ten years previously all the tobacco exported from India to the United Kingdom was sun-cured country leaf, nowadays probably approaching 90 per cent. of it is flue-cured "American" leaf, a portion of which is, as we said, suitable for and used in cigarettes in the United Kingdom.

In 1937, the latest year for which complete figures are available, no less than 19,052 thousands lbs. of Indian tobacco were exported to the United Kingdom, and it is believed the 1938 figures are even higher. The United Kingdom, indeed, offers great score for expansion of the Indian tobacco trade, but lately there have been complaints that prospects of wider sales have been militated against by the inferior quality of some of the leaf exported from India.

In India, weight of leaf rather than quality has for centuries most frequently been the basis of sales by the small cultivators. The better grade tobecces, including the best of the recent kinds suited for cigarettes, are grown for the most part on contract for manufacturers or tie efforts and experiments. In 1925-27 experiments, which included comparison of American manufacturing interest in the United Kingdom varieties, cross breeding, methods of cultivation obtain their supplies of Indian leaf chiefly from

or through allied interests in India. Most of | United Kingdom market. the remaining leaf which reaches the United Kingdom is shipped, not by growers but by small merchants and financiers to merchants or brokers for sale on consignment.

As a first step in the improvement of marketing methods an effort is being made to introduce into both the internal and the export trade some system of uniform grading.

In the early months of 1937 legislation applicable to the whole of British India (excluding Burma) was passed by the Central Legislature to provide for the grading and marketing of certain agricultural produce, including tobacco. The Agricultural Produce (Grading and Marketing) (Tobacco) Rules, issued under this legisla-. tion in March 1937, prescribe grade designations, definitions of quality, methods of marking and packing for unmanufactured flue-cured and san-cured Virginia and sun-cured Natu (country) Anyone desiring to grade and mark tobacco with the prescribed grade designation marks must first secure the authorisation of the Agricultural Mark ting Adviser. Grading is not compulsory; but the grower or dealer can, if he wishes, obtain an official grade for the produce competitive position of Indian tobaccos in the making.

There have despatched to the Unite consignments of Guntur United Kingdom trial cigarette graded and marked in accordance with the rules. These consignments have been favourably received and the export trade in tobacco shows every sign of entering a flourishing period.

The most important tobacco tracts in British India are-(i) the Combatore and Dindigal tract of Madras, where the Usi-Kappal and Wara Kappal varieties are largely grown, the ware happed varieties are largely grown, one former supply the Trichinopoly cigar; (ii) the Oodavari Delta of Madras; (iii) the Rangpur tract of Bengal; (iv) the Districts of Bihar and Orissa; (v) Guerat in Bombay and (vi) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvesed during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broomgrades should be used for trading not only on the the degree of fermentation of the leaves, different internal market but also for export. The qualities of tohacco are obtained. A black outcome of these experiments will be of interest variety is used in India for cake tobacco and to other Emnire growers for successful. to other Empire growers, for successful grading this is the most common product but a certain and better marketing should strengthen the amount of yellow leaf is grown for cigar

THE LAC INDUSTRY.

insect which lives in the twigs of certain trees. The insects are extensively cultivated, especially in Northern India. Lac is an important constituent in numerous industrial processes.

The chief use of lac in India is in polishing furniture. But this can obviously absorb only a limited quantity of the produce. Another use is in "hot" inequering of wooden toys, penholders, etc., but here again the consumption, though increasing is still very small. Refuse lac is sometimes used in the manufacture of bangles and for filling hollow gold and silver articles. But all the above uses together probably do not account for 1 per cent, of the total lac produce.

Shellac moulding appears to be confined in India only to the manufacture of gramophone records; and this manufacture, partly for climatic reasons, is not extensive. Shellac was

Lac is a resinous substance secreted by an lable to replace it. Among high-class gramophone records, those with a shellac base are undoubtedly the best.

> The steady improvement in the lac industry since 1900 has been largely due to the growth of the gramophone industry. At present 40 to 50 per cent. of the total world output of lac is consumed in the manufacture of gramophone records. There is yet a large potential market for gramophones in the East.

With improvements in heat resistance and mechanical strength, a wide field of application which the synthetic resins have opened up can still be exploited by shellac, either alone or in combination with other resinous materials. The Indian Lac Research Institute at Namkum in Bihar and its fellow research organisations in London and New York are engaged in investionly one of many other materials for the mould-ing trade till the rise of the gramophone industry billtles of improvements in cultivation, pest gave shellac the unique place which it now control, &c., which will lead to the production occupies, no synthetic resin having yet been of a better grade of raw material.

INDIAN FILM INDUSTRY.

a Congress and Exhibition in Bombay.

The first Indian film "Harischandra" was produced by Mr. D. G. Phalke in the year 1913. and since then the development of the industry has been both extensive and rapid. With the coming of talkies the pace of progress substan-tially increased. Early development took place in Bombay, which has been described as the film producing concerns, and the total pro-"Hollywood of India." From Bombay the duction of feature films, of an average length industry spread to other provinces, and it of 14,000 ft., comes on an average to about is now well established in Bengal as also in 200, at an average cost of about Rs. 1,00,000 Madras, in which it has made remarkable per film. It is thus estimated that about progress in recent years. The principal film Rs. 2,00,00,000 are spent annually in the producing studies in India are located at Bombay, production of pictures.

The Indian Film Industry at the present learns to occupy eighth place among the claims to occupy eighth place among the climbatore, Erode, Rajahmundry, Salem, industries of India. It is 25 years old and celebrated its Silver Jubilee in 1939 by holding and Karachi

> Although exact figures are not available in certain cases, it is estimated roughly that about Rs. 17 crores are invested in the production, distribution and exhibition branches of the industry, in which about 40,000 people earn their livelihood. There are about 75

The Cocaine Traffic.

The form of cocaine chiefly used in India is men and patrols whose duty is to shadow the Cocaine Hydrochloride. This sait forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid several cases of importation of Japanese cocaine cocaine—of which this is a sait—is obtained were detected, the importers being Japanese from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Nativos as a stimulant. Tea made is said to be very effectual in keeping people in India for 1935-36 shows that he total quantity

Spread of the habit .- The cocaine traffic in India which seems to be reaching in alarming proportion in spite of jegislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in l'aris the drug is mostly used by prostitutes or by men as an aphredistac. The habit has spread chiefly to those classes which are prohibited by religion or esser rules from partaking of liquor and the well-known Indian intoxicating drugs,

Smuggling.-So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sallors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine cuters India are Bombay, Karachi, Calcutta, Madras, Marmagoa and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahors, Mooltan, Surat and

were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

The Review of the Customs Administration during the year was 139 ozs. 330 grs. The entire quantity was seized by the Customs Staff, Calcutta. Selzed cocaine is purified and supplied to the Government Medical Stores Depots in India and to some extent to licensed chemists and druggists.

It is no longer possible to buy cocaine from any betchut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—I his varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and improtetion by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitions is allowed to transport, Medical practitioner is allowed to transport, or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a bona fide precription from a duly qualified biedical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1012 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Ex. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or Ahmedabad. Delhi especially is notorious for a term which may extend to 2 years or for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Customs houses. It is packed in parcels of so as to enable accurity to be taken from newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cumpleyly section for the pulseburnet of buseavers. The retail trade in the towns is very cumplingly section for the pullshment of houseowners organized and controlled. In addition to the who let their houses to habitual cocaine actual retailers, there is a whole army of watch-

The Opium Trade.

Mention opium and half the Western world of India undertook in order to lessen the danger directs its thought to India, as though India of smuggling into China, and as an earnest of were a most unscrupulous producer of the most their desire to assist that country, strictly to noxious drug on earth. Refer to the League of confine the remainder of Indian opium export Nations' proceedings in regard to opium and to the legitimate demands of the non-China again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries. So much for the internal position.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lav down.

The China Trade .- The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to: (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes; (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure. Shanghai and Canton excepted; (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China; and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire is the only country that has made any conto stamp out the opium trade and opium siderable sacrifices of the kind. consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China pari passe with the reduction of exports from India.

markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by their letter to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent. yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. India

Indian Uses of Opium .- There is a funda. mental difference between the problem in India ther things, to reduce production in China and that in foreign countries, particularly in America and Europe. America and Europe and imposed by the agreement, the Government phia and it is on the experience of the abuse of these drugs in those countries that much of Majesty's Government. The Conference, after the condemnation of Indian policy is based, an exhaustive discussion of the phenomena It is accepted that the consumption of opium presented by the various areas selected for in America and Europe is in effect hardly less functionally and in the light of the personal disastrous than that of morphia and cocaine, knowledge of the representatives of the different And the reason is that to Americans and Europeans oplum is an unacoustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long ance to drigs to the use of which cary as a habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, which is the habit of the rar Eastern races, rather than of the Indian-races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (e.g., the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India to these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst. to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time-honoured.

Present Policy .- The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to express.

Opium is under the current Indian constitution a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simia by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local These conditions are effectively enforced by the Governments at the special instance of His excise departments of the various provinces.

Provinces and of the reports of the local commit-tees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipurin the United Provinces where it can only be cultivated under license. Importation into British from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British is India's progressively and rapidly being reduced. The sown area in British India which produced the crop of 1931-32 was 37,012 acres, i.e., 26.3 per cent. of the area in 1922-23, and 20 per cent. of that in 1912-13. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reduction was resumed in 1938.

The population of British India according to the 1931 Census is 271,526,992, and the consump-tion per head in British India, excluding Aden, inclusive of the opium used for veterinary purposes but excluding that consumed for purposes but excluding that consumed on medicinal purposes was 11.04 grs. per head of the population. The population of Aden in 1931 was 50,809 and the opium consumption per head was 12.3 grs. Since 1931 the consumption rate has further diminished.

Close supervision is maintained over the licensed vendors in all parts of British India; the conditions of their licenses require that the shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the

GLASS AND GLASSWARE.

Glass was manufactured in India centuries before Christ, Pliny mentions "Indian glass" as being of superior quality,

As a result of recent archeological excavations, a number of small crude glass vessels, indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian references to glass are in the Mahavamsa the Chronicles of the Sinhalese, Kings (806 B.,C.) when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton that by the sixteenth century, glass was an established industry in India, producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were rough.

Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this direction. Since then, a number of concerns have started. Some of them have falled. They devote themselves mainly to the manufacture of bangles and lampware side by side with bottlemaking on a small scale.

In its present stage, the industry takes two well-defined forms—(1) Indigenous Cottage Industry and (2) the modern Factory Industry. The Indigenous Cottage Industry, which is represented in all parts of the country, has its chief centres in the Firozabad District of the United Provinces and Belgaum District in the South. It is mainly concerned with the manufacture of cheap bangles made from glass cakes or blocks, made in larger factories. The industry at present is in a flourishing state and supplies nearly one-third of the Indian demand for bangles. However, it is now faced with Japanese competition, and already the Japanese silky bangles are ousting the old type Indian products.

The modern Factory Industry in glass is still in its infancy in India. The existing factories mostly stop at producing glass cake for bangles as in Firozabad or a simple kind of lampware and bottles. There is one factory in the United Provinces, which since 1929 has been manufacturing sheet glass. The Indian glass industry has not advanced to the stage of manufacturing artistic glassware.

Records of the earlier ventures have shown that failure in some cases was due in part at least to preventible causes. Foremost among these, were lack of enlightened management, lack of expert attention and, in many cases, small attention to choice of site. Specialisation, too, has been lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously, like lampware, bottles and bangles. Paucity of sufficient fluid capital for initial expenses has also been another contributory factor in bringing such ventures to grief.

In October 1931, the inquiry into the glass industry was referred by the Government of India to the Indian Tariff Board. The Board submitted its report in March 1932. It recommended the grant of protection for ten years and outlined proposals for protective duties on the following basis:—(1) Sheet and Plate Glassiculding figured and ribbed glass—Rs. 4 per 100 sq. feet or 25 per cent., ad valorem, whichever is higher; bangles, beads and false pearls—50 per cent., ad valorem; glass and glassware of certain specified types, like tumblers, tiles, shades, chandeliers—50 per cent., ad valorem.

These findings however were not acceptable to the Government of India, who considered that the absence of indigenous supplies of raw materials constituted a disadvantage to the industry, which could not possibly be balanced by any advantages which it might possess in other respects. This, however, does not imply rejection of the recommendation, because Government have decided to postpone their final decision in the matter. For the present Government have decided to afford the glass manufacturing industry a certain measure of relief by way of a rebate of duty on imported soda-ash.

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. The trade and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vickstitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by

the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Houses.—The fifteenth report of the Imperial Economic Committee state that Indian hides, both raw and partially tanned, are largely used for the upper leather of boots partially tanned skins are used for fancy leather articles, bookbinding and for covering the small rollers used in cotton mills for drawing

the thread. Raw sheepskins are used for similar articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of glace kid, of which commodity the United States is the chief producer.

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre. Directly an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom, but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta before the war, largely the result of the work of German firms established there, had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes. among which may be cited fiscal changes, the entry into the trade of new and at first inex-perienced firms, the increased cost of arranging for supervision at up-country points. It has, however, been recovering its reputation.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisa-tion and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent, on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries. Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries ex-

plained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have, in fact, the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent, export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire, and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate. The export duty on raw skins was abolished by the budget for 1985-36.

indigenous methods.—India possesses a large selection of excellent tanning materials such as Acadia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolams. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

COIR.

Coir is the trade name given to the fibre the husk against a revolving spiked drum which obtained from the husk of the coconut fruit. combs and extracts the fibre. The shorter India and Ceylon have a virtual monopoly in the production of this by-product of the coconut industry and its development in these countries has been rendered possible by the fact that there coconuts are usually harvested when the husk and used in the manufacture of brushes, etc. of the fruit is still green, though the coconut within is ripe. Good quality coir can only be produced from the fresh green husk of the ripe fruit. If the nut is not fully ripe the fibre in the husk has not developed its full strength. and if the fruit has dried out the fibre is weak, dark coloured and difficult to extract.

fibres collect in the drum and after cleaning are classed as "muttress fibre." The longer fibres are retained in the hand of the operator and are classed as "britle fibre" which is exported About 75 per cent. of the Ceylon produce is exported as raw fibre, and only 25 per cent. as yarn or manufactured coir.

The Indian industry, as far as the export trade is concerned, is confined to the backwater regions of the Malabar coast, Cochin, Travancore, and to the Laccadive and Divi Islands, which In Ceylon, the extraction is done to machanical are administered by the Madras Government. means on a factory scale after the water have been retted in water for two or three treats, and of coir yarn forms a well organised cottage under such methods it is not personal to obtain industry. The freshly harvested nuts are either the colour or cleanliness of the tarry retted purchased by merchants who convey them down indian coir. The process consists of holding Such places are situated along the tidal reaches colour, which is, in reality, a gauge of proper of the backwaters, and sites for retting are retting. The best quality of coir is a goldenselected in places where the ground contains a yellow colour and the lowest grade is a grey considerable admixture of sand. Here, pits are colour which shows that the husks have either considerable admixture of sand. Here, pits are colour which shows that the husks have either dug, either in the backwater itself or on the been over-retted or that the condition for banks and after lining these with palm leaves they are filled with the husks. When filled they are covered with plaited coconut leaves and weighed down with soil or mud. The husks are left to ret in these pits for a period of about eight months, the tidal rise and fall of the water and the porous nature of the ground ensuring constant water movement through the mass of retting husks and thus supplying aeration for the necessary bacterial action. At the end of this period, the husks are removed from the retting pit, washed in clean water and distributed among the local people who extract the fibre. This is usually spare time work done by the women of the house. Firstly, the outer skin of the huskis removed and the huskis then beaten with a wooden mallet on a block of wood or stone. This separates the fibre from the decaying pithy matter in which it is embedded in the husk. The fibre thus extracted is dried in the shade and then beaten or willowed with thin bamboo canes. The fibre is then returned to the merchant who further cleans this in a revolving drum furnished with projecting cane spikes. The fibre is sorted out into colour grades and distributed among the local people who spin this into yarn. The fibre is first made into "slivers" and is then either spun by hand or on a wheel. This is again returned to the merchant who again grades this for colour and splices the short lengths into a continuous length of 450 yards. It is then tied into bundles and is disposed of to the factories where it is either baled up for export or is manufactured into matting, door mats, braid, ship's fenders, rope, etc.

manufacture and for export, according to its products.

retting have not been satisfactory.

Properly retted coir is of the highest quality. It is much more easily spun than machine made coir, because the fibres are clean and free from adhering pith and a much more even yarn is obtained. It is much stronger than machinemade coir because none of the long or "bristle" fibres have been removed in the process of extraction. The colour is not only attractive, but is an indication that retting has been carried through to the correct stage.

Coir fibre, when made into ropes, is extremely clastic and thus yields to heavy strains, and it therefore has special uses. It does not rot easily when exposed to atmospheric conditions, or to salt or fresh water, and in manufacture it is found to take dves readily.

The value of the Indian trade is considerable: the imports into Great Britain alone, which represent less than 20 per cent. of the Indian exports, are shown in the Board of Trade returns to amount in value to more than one million pounds per annum. It is an industry which provides a profitable occupation to the densely populated back water tracts of Western India. and it provides the raw material in the shape of yarn and fibre for a considerable industry in Europe. More than 80 per cent. of the manufactured coir products imported into the United Kingdom are produced in India and more than 90 per cent. of the coir yarn. The imports of coir fibre from India are inconsiderable and amount to only 25 per cent. of the quantity imported. The export of coir fibre from India represents in value only 0.35 per cent. of that of the total India. The yarn is very carefully graded, both for of the total Indian exports of coir and coir

INDIAN INVENTIONS AND DESIGNS.

While India will have to depend for some time to come on foreign manufacturers for her supply of textile machinery, power plants and other industrial requirements, Indian engineers and chemical experts will have ample opportunity to exercise their inventive skill in various other directions. These may include agricultural implements, domestic appliances, drying and moistening apparatus, labour-saving devices, small manufactures in hardware, pumps, water lifts, furniture and metal ways, railway signalling and controlling, railway vehicles, buildings and structures, valves and cocks, latrines, closets and sanitary appliances. There will also be new chemical processes an apparatus including the manufacture of vegethe near future.

A hand book to the Patent Office in India which is published by the Government Press, Delhi, gives the various Acts, rules and instructions bearing on the subject together with links for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the saving devices, small manufactures in hard-ware, pumps, water lifts, furniture and metal wares, construction of roads and permanent indicates wherein they differ from English law and procedure.

The existing Indian Patent Law is contained in the Indian Patents and Designs Act, 1911, as amended in 1930 and the Rules of apparatus including the manufacture of vege-lact, 1911, as amended in 1930 and the Rules of table products, foodstuffs, treatment of oil 1933. The Patent Office does not deal with seeds, the use of by-products and waste trade marks or with copyright generally in materials, use of starchy raw materials for the sizing of yarn and cloth, tailow substitutes, fall under the Indian Copyright Act III of manufacture of caustic soda, soda sab, bleaching lost. There is, in fact, no provision of law in products for use in the various industries which the sountry will be engaged in developing in Marks Act, (IV of 1889) which forms Chapter XVIII of the Indian Penal Code. XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matter of major interest. One main difference exists however, as owing to the absence of provision of law for the registration of Trade Marks. India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1855, atter an agitation that had been carried on littuily for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action and, owing to some informalities, the Act itself was repealed in the following year. In 1850 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1888, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burms, but it does not embrace the Native States. Of the latter Hyderabad (Decoan), Mysore, Gwallor, Baroda, Travancore, Marwar, Cochin, Kashmir and Jamu have ordinances of their own, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. A patent granted in British India does not extend to the United Kingdom or to any other British Possession, but under the reciprocal arrangement an applicant for an Indian patent has 12 months priority in the United Kingdom, Australia, Canada, New Zosland, the Irish Free State, the Union of South Africa and Caylon and vice versa. The object of the Act or 1911 was to provide a simpler, more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail.

New Legislation.—Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1980 and includes the following:—

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years instead of 14 years.

Patent of Addition will be granted on the eriginal patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent.

Fresh provisions are made for the use of an invention by Government.

Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms.

Several other facilities are given under the Indian Amended Act of 1980 on the lines of the present British Patent Act.

What constitutes patentable invention—
The term invention means any manner of new manufacture and includes an improvement, while manufacture includes any art, process or manner of producing, preparing or making an article and also the article prepared or produced by manufacture.

Thus a bare discovery or a new principle cannot be patented; the invention or improvement must include some form or manner of manufacture, and may consist of a machine or apparatus or a composition or compound or a process of manufacture. It must be in the form of a method or means or production of a vendible article.

A game of skill or chance without the means of playing it or a method of calculation or writing music, medical prescriptions, vegetable or natural substances suitable for food, an ornamental design for a piece of furniture or for a sari or other textile fabric do not constitute patentable inventions.

Patents will, however, be granted for new and useful inventions or improvements relating to any art or process or a machine or article of manufacture or a composition of matter. Thus a machine or appliance will constitute a mechanical patent; a new method of manufacturing an article which reduces a number of steps to a single operation will form a process patent while metal alloys, chemicals, paints, soaps, varnishes and dyes will be included in compound or composition patents.

A patent may be obtained for a new method of applying a known article or a new contrivance applied to a new object or purpose and which yields a new rosult. A new contrivance or device applied to old objects for producing a new and useful result is also patentable. An old substance produced by a new process is a new manufacture; so also a novel and ingenious combination of old parts yielding useful results.

The mixture of two or more substances in certain definite proportions forming a compound substance of advantage and utility for its useful properties will be subject-matter for a patent as also a chemical process with or without the mechanical devices necessary for it.

In the case of chemical inventions the chemical and physical properties of bodies and their constitutions cannot form subject-matter for a patent, but they may be utilised for manufacturing foodstuffs, dyes, beverages and other useful and vendible compounds or compositions which can be covered by a patent. It should also be noted that in chemical processes the article or substance if produced may be old, but if the mode of producing the known substance is new the process will be patentable.

There has been a large expansion of insurance; business in India during the last decade. This is shown by the fact that the total business remaining in force with Indian Life Offices at the end of the year 1927 was Rs. 60,00,00,000 and by the end of 1938, had grown to Rs. 1,75,00,00,000. The total new sums assured by the offices in 1936 amounted to nearly Rs. 88,00,00,000, the largest of any of the previous ten years. Again, the total life assurance income of Indian companies was Rs. 4,29,00,000 in the year 1027; while in 1986 it was Rs. 11,35,00,000, a figure which exceeded the preceding year's income by over Rs. 2.00.00.000.

DISTRIBUTION OF COMPANIES

The total number of companies which are subject to the provisions of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 was 379 according to the "Indian Insurance Year Book 1937." Of this total 232 are constituted in India and the rest abroad. The total number of Indian Life Offices which are subject to the Indian Life Assurance Companies Act is 213, 178 being proprietary and 35 mutual.

Of the 232 Indian Companies, Bombay heads the list of Provinces with 69 companies, Bengal comes second with 50. Other provinces

as the

Assam and Burma, 2 each; and the North West Frontier Province, 1. Out of the 147 non-Indian Companies 70 were constituted in the United Kingdom, 30 in the British Dominions and Colonies, 17 in the Continent of Europe, 16 in the United States, 9 in Japan, and 5 in Java.

Rs.

Most of the Indian companies carry on life assurance business only. They are 185 in number, and of the remaining 47 Indian companies, 28 carry on life business along with other insurance business and 19 carry on insurance business other than life. Most of the non-Indian companies carry on insurance business other than life. Out of the total number of 147 non-Indian companies, 122 carry on insurance business other than life, 12 carry on life business only and 13 carry on life business along with other insurance business. Of the latter 25 companies, 16 are constituted in the United Kingdom, 7 in the British Dominions and Colonies and 1 each in Germany and Switzerland.

During the year 1936, 4 Indian companies were established with the object of transacting life assurance business and 2 commenced life assurance business under the Indian Life of the 202 Indian Companies, Bombay assurance business under the Indian Life heads the list of Provinces with 69 companies, Assurance Companies Act. Of these companies, Bengal comes second with 50. Other provinces 2 were established in the Bombay Presidency, have the following number of companies:

2 were established in the Bombay Presidency, have the following number of companies.

2 in Bengal, and 1 each in Madras and the Punjab. During the last five years, the number vinces, 12; Delhi 10; the Central Provinces, of new life assurance companies formed in 5; Bihar, 4; Sind and Ajmer-Merwark, 3 each; India is approximately 90. As against these new companies, 21 companies went into liquidation during the same period of which over a half were established in Sind and came to grief mainly on account of the unsound business they were transacting on the dividing plan.

DIVIDING INSURANCE BUSINESS

Some Indian companies transact life assurance business on the dividing plan under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The defects of dividing insurance business are many. Most of the companies which transacted dividing insurance business for long. This class of dividing business as well as the other on the call system has been prohibited under the new Insurance Act. 1938. "It is accordingly highly essential that those companies which still transact this class of business should stop it forthwith and consult such as the other on the call system has been procompanies which still transact this class of business should stop it forthwith and consult business into ordinary life assurance business on sound principles," declares the "Insurance Year Book."

PROVIDENT INSURANCE SOCIETIES

In addition to the insurance companies which are subject to the provisions of the two Acts of 1912 and 1928, there are 554 societies which are registered under the Provident Insurance Societies Act, 1912 and transact mostly dividing insurance business. The remarks about "Dividing Insurance Business" are applicable to these societies also. Very few of the existing provident societies are survivors of those which a quarter of a century ago numbered about 1,200. When the Provident Societies Act of 1912 was passed, the majority of these societies, 290 are established in Bengal, 47 in the Bombay Presidency, 60 in the Madras Presidency, 82 in the Punjab and 26 in Sind, and the remaining societies are scattered over the other provinces of India.

NEW LIFE BUSINESS

The total new life assurance business (excluding business on the dividing plan) effected in India during the year 1936 amounted to 273,000 policies assuring a sum of Rs. 403 crores and exceed and yielding a premium income of Rs. 241

lakhs, of which the new business done by Indian companies amounted to 239,000 policies assuring a sum of Rs. 36 crores and having a premium income of Rs. 184 lakhs. The share of the British companies in respect of new sums assured was Rs. 4½ crores, of the Dominion and Colonial companies Rs. 5½ crores, of the single German company Rs. 1 crore and of the single Swigs Company Rs. 1 crore.

The average sum assured under the new policies issued by Indian companies was Rs. 1,504 and under those issued by non-Indian companies Rs. 3.148.

The total life assurance business effected in India and remaining in force at the end of 1936 amounted to 1,261,000 policies assuring a total sum of Rs. 261 crores, including reversionary bonus additions and having a premium income of Rs. 13 crores. Of this the share of Indian companies is represented by 989,000 policies assuring a sum of Rs. 168 crores and having a premium income of Rs. 7½ crores.

ANNUITY BUSINESS

Annuity business continues to be slight in India. This class of business, for various reasons, does not appear to be as popular as in the West. The total new annuity business effected during the year 1936 was for the amount of Rs. 14½ lakhs per annum, of which the share of Indian companies was Rs. 30,000 per annum. The total amulty business remaining in force at the end of that year was for the amount of Rs. 86 lakhs per annum, of which the amount payable by Indian companies was Rs. 14 lakhs per annum. Some Indian Life Offices have extended their operations outside India, mostly in British East Africa, Ceylon and Straits Settlements. The total new sums assured by these offices outside India in 1936 amounted to Rs. 14; crores yielding a premium income of 11 lakhs and the total sums assured, including reversionary bonus additions remaining in force at the end of 1936, amounted to Rs. 7 crores laving a premium income of Rs. 36½ lakhs.

The total new sums assured by Indian Life Offices in 1936 amounted to nearly Rs. 38 crores and exceeded the previous year's figure by Rs. 5 crores.

INDIAN LIFE OFFICES' BUSINESS

The following table shows the New Business effected by Indian Life Offices during each year since 1926, the Total Business remaining in force at the end of the year, the Total Life Assurance Income of Indian Companies and the Life Assurance Funds.

The total deposits made by Indian Life Offices with the Reserve Bank of India, Calcutta, under section 4(1) of the Indian Life Assurance Companies Act, 1912, up to the 31st December, 1937, amounted to Government securities of the face value of Rs. 1,94,77,000 as against securities of the face value of Rs. 1,73,88,000 in deposit on the 31st December 1936.

TOTAL LIFE INCOME

The total life assurance income of the Indian companies in 1936 amounted to Rs. 11-35 crores and exceeded the preceding year's income by over two crores. The income consisted of Rs. 844 laks under premiums, Rs. 178 lakhs under interest and Rs. 118 lakhs under other receipts.

LIFE FUNDS AND INTEREST YIELD

The life assurance funds increased by Rs. 4½ crores during 1936 and amounted to Rs. 40½ crores at the end of that year. The average rate of interest earned on the life funds during the year after deduction of income-tax at the source, was 4½ per cent.

The net rates of interest realised by the Indian Life Offices in each of the past six years are as follows:—

Year 1931 1932 1933 1934 1935 1936

Rate of

Interest .. 5.42 5.38 5.17 5.08 4.93 4.69

POST OFFICE INSURANCE FUND

Besides the Indian Life Offices, there are some pension funds, mostly connected with Government services, which are exempt from the operation of the Indian Life Assurance Companies Act of 1912. The Indian Post Office Insurance Fund is also exempt from the operation of that Act. The Post Office Insurance Fund was instituted by the Government of India in 1833 for the benefit of the postal employees, but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund for the year ending 31st March, 1937:—total number of policies 94,588; total sums assured and bonuses Rs. 19,56,73,000; total income Rs. 1,02,09,000; laffe Assurance Fund Rs. 7,46,34,000.

NON-LIFE BUSINESS

The net Indian premium income of all companies under insurance business other than life assurance during 1936 was Rs. 2½ crores of which the Indian companies' share was Rs. 74 lakhs and that of the non-Indian companies Rs. 2 crores.

The total amount is composed of Rs. 137 lakhs from fire, Rs. 52 lakhs from marine and Rs. 85 lakhs from miscellaneous insurance business.

The Indian companies received Rs. 36 lakhs from fire, Rs. 11 lakhs from marine, and Rs. 27 lakhs from miscellaneous insurance business. The non-Indian companies received Rs. 101 lakhs from fire, Rs. 42 lakhs from marine, and Rs. 58 lakhs from miscellaneous insurance business.

From the net figures given above it is not possible to form a correct estimate of the total business effected in India as a considerable portion of Indian business of both Indian and non-Indian companies is re-insured outside India. The Indian companies which transact a substantial amount of marine insurance business also operate outside India. These companies had a net premium income of Rs. 70 lakhs in 1936 from business outside India.

It will be seen that the bulk of the investments are in stock exchange securities which constitute about 70% of the total assets and amount to Rs. 34½ crores after allowing for an investment fluctuation fund of Rs. 76 lakhs provided for in the balance sheets.

The total assets in India of non-Indian companies amount to Rs. 49 crores. The bulk of this amount —Rs. 38 crores—represents the Indian assets of companies constituted in the United Kingdom and Rs. 10 crores those of companies constituted in the Dominions and Colonies. The Indian assets of the American companies amount to Rs. 2 lakhs, those of the Continental companies to Rs. 27 lakhs, of the Japanese to Rs. 7 lakhs and of the Javanese to Rs. 1,000 only. Out of this total amount of Rs. 49 crores, Rs. 44 crores represent Indian assets of companies which carry on life assurance business in Indian either solely or along with other insurance business.

The expenses of management of Indian companies in 1936 was 24 1 per cent of the total income as against 24 8 in 1935. In 1913 the percentage was 18 0.

The dividend to shareholders in 1936 was ·7 per ent. as against · 5 in 1935. It was the lowest in 1915, 1919, 1924, and 1930 being · 3, and the highest in 1928 being 1·8.

CLAIMS AND VALUATIONS

In 1913 the claims by death were responsible for 32.9 per cent. of the companies outgo, and those by survivance for only 9.7. In 1923, the figures were: by death, 21.0, and by survivance, 15.7. In 1933, the respective figures were: 13.9 and 13.3, and in 1936, they were 13.6 and 12.8.

One hundred and sixty-five Life Offices submitted their accounts and business returns for the year 1936 under the provisions of the Indian Life Assurance Companies Act. The Insurance Year Book contains the results of the latest valuations of 91 of these Life Offices, a majority of which have undergone more than one valuation. The valuations disclosed a surplus in the case of 72 companies and deficit in the case of 19 companies. The total surplus of these 72 companies amounted to Rs. 4,11,00,000, of which Rs. 3,65,00,000 was allocated to policy-holders and Rs. 30.00.000 to shareholders and the balance was either set aside as an additional reserve or carried forward unappropriated. The deficit in the case of 19 companies amounted to Rs. 6,25,000. Of these the deficit in the case of 17 companies, was covered by the paid-up capital, thus proving their solvency but precluding the payment of bonus or dividend. In the case of the remaining two companies, the deficit was not covered by available assets, and they were taking steps to transfer their business to other Life Offices.

NEW INSURANCE LEGISLATION

Fundamental changes have been made in the Insurance Law by the new Insurance Act which came into operation on July 1st 1939.

The Central Government have adopted legislation regarding compulsory third party motor insurance, as a result of the report made by the Motor Vehicles Insurance Committee. The Central Government have, however, left it to the Provincial Government to put this provision into workers and for this purpo effect within four years of the date of the Act other data are being collected.

coming into force. The Act came into force on July 1st 1939. As a result of comprehensive enquiries made by the Motor Vehicles Insurance Committee in all quarters of India, it was found that the rate of deaths per motor vehicle was at least 93 per 10,000 compared with 59.4 (the highest figure) in Italy and 7.4 (the lowest) in New Zealand.

The figures for non-fatal accident in India were also found to be high, though there is reason to believe that a large number of such accidents were not reported.

The Committee pointed out that the introduction of compulsory insurance will not suffice by itself to eradicate the dangerous incidental to motor transport. If steps were not taken to minimise the number of accidents, any scheme of compulsory insurance might fail because of its expense.

One quotation will serve to show how necessary are the proposals urged in the Report :--

'We have received evidence that overloading of public vehicles, both passenger and goods, is common. We ourselves observed, at a place in Sind, a bus full inside, with a heavy load of lugguage on the roof and a further complement of passengers on top. Goods vehicles are frequently loaded beyond the maker's specifications, with a dangerous strain on their machinery particularly the brakes.

"We were informed in Bombay that accidents had been caused by such vehicles bringing down the ghats, loads which were in excess of the limit of safety. In Karachi town the statistics show that on an average every goods lorry plying in the town has an accident involving injury to a person once every 15 months.

SOCIAL INSURANCE

Social Insurance Legislation is foreshadowed by the Bombay Government for certain types of workers and for this purpose statistics and

Finance.

organisation of India is in many respects a diture, like those on education and sanit reflection of her constitutional development. In which bulk largely in Provincial budgets. the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was allpowerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Vicerovalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of Indla, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These con-tributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient, to last only so long as was necessary for the Government of Indla to reduce its post-war expenditure and develop its re-venues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion indeed it was only the first phase. The Government of India had taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces were left with resources either almost static, like land ing the existence of such a duty from the outset revenue, or actually declining, as with excise of federation. We are advised that the probable where steps are being taken to reduce the net yield of the tax for all-India at a reasonable

The gradual evolution of the present financial | fronted with the great growing sources of expenditure, like those on education and sanitation

A Review.

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Pinance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review is said to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less in income tax than they were entitled to.

Regarding possible new sources of revenue; Federal or Provincial, the Federal Finance Committee reported as follows:—

Federal.

Excise on Tobacco.-The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend ilcenses and fees, but that an excise duty imposed in the near future could not the relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small establishments and even as a domestic industry. Vend licenses and fees can obviously be imposed only by the Governments of the Units, and their imposition by the Provincial Governments is now being encouraged by the Government of India. The difficulties in the way of a federal excise may be overcome in course of time, but it would be unsafe for us to rely on this in the near future.

Excise en Matches—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplatconsumption of alcoholic liquor in response to rate, with due allowance for reduced consumpthe strong Indian sentiment towards prohibition. At the same time the Provinces were con-2.50 crores would be raised in British India.

Other Excises.—It is possible that other It will be seen from our later proposals in excise duties may occupy an important place regard to powers of taxation that the federalisain the fiscal Policy of India in the future, but we do not feel warranted in relying upon the introduction of such measures in the early vears of federation.

Monopolies.-We have examined suggestion, made at the Round Table Conference, that federal revenues should be augmented by a few selected monopoles. From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of ralsing revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives, which has been suggested as a possible monopoly, is already subject to licence. Public utility monopolies stand on rather a different footing; but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps.—In the Peel Report it was observed that said for federalising Commercial Stamps on the lines of various proposals made in the past, but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure.

In proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudge the possibility that, as part of the general federation settlement with the States, it might be found desirable to include these duties away the sources of federal revenue. duties among the sources of federal revenue. This consideration might well outwelgh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax.-From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super-tax on companies in British India, the yield at present would be negligible.

Provincial.

Taxation of Tobacco.—We have already east briefly with this question and have dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that ex hypothesi the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised; and as that development takes place an excise levied at the factory by one Unit of the Federation

tion of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units. If it so desired.

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties.—Bombay is, we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties, and the attempt was unsirecessful. We understand that even that Government would have preferred that legislato should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units; but clearly the facts would not justify reliance on them as a source of revenue in the near future. (Here it may be noted that in 1938 the Government of India deputed a special officer, Sir Alan Lloyd, of the Central Board of Revenue, to conduct an investigation into the possibilities of instituting a system of death duties in India. The upshot of the investigation was that the Government of India decided not to proceed with the proposal to impose death duties, as most provincial Governments were opposed to it.)

Terminal Taxes .- We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. We are not prepared to regard terminal taxes as a normal source of revenue.

Incomes .- We Taxation of Agricultural have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered, as we were commissioned to do, the more limited question of "the possibility of empowering individual Provinces, if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of Income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax iaw and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income; and we doubt whether any provision need be inserted in the constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to levied at the factory by one Unit of the Federation taxation by it, except with the consent and would be a tax on consumers in other Units. co-operation of the other Government.

Government expressed its intention of taxing to the provinces so that finally 50 per cent.

agricultural incomes. The Government of of the distributable total has been relinquished Bihar took steps to introduce legislation to this in the intermediate five years, so long as the end, while the Governments of Bombay and portion of the distributable sum remaining with Madras were known to be examining the centre, together with any contribution position.)

Niemeyer Report.

A necessary prelude to the introduction of the Constitutional Reforms was an investigation of their safety in the light of the financial situa-tion and prospects of India. The investigation was carried out by Sir Otto Niemeyer whose report was published in April 1936. The Report proposed immediate financial assistance from the beginning of provincial autonomy to

Annual cash subventions are as follows: To the U. P. Rs. 25 lakhs for 5 years only, to Assam Rs. 30 lakhs, to Orissa Rs. 40 lakhs, to the N. W. F. Province Rs. 100 lakhs (subject to reconsideration after 5 years), and to Sind Rs. 105 lakhs to be reduced by stages after 10 years.

The total approximate annual relief in lakhs aimed at by Sir Otto Niemeyer is as follows:— Bengal Rs. 75, Bihar Rs. 25, C. P. Rs. 15, Assam Rs. 45, N. W. F. Province Rs. 110, Orissa Rs. 50, Sind Rs. 105, and U. P. Rs. 25, extra recurrent cost to the centre Rs. 192 lakhs.

We are aware of no reliable data for estimating the introduction of provincial autonomy, but the yield of such taxation. (Here it may be subject to the provise to section 138 (2) of the noted that during 1938 more than one Provincial Act. The centre is to distribute the income-tax

As regards the provincial share of the proceeds from income-tax, Sir Otto Niemeyer recom-mended that half of the proceeds should remain with the Centre, while the other half should be distributed among the provinces on the following percentage division:—Madras 15, Bombay 20, Bengal 20, U. P. 15, Punjab 8, Bihar 10, C. P. 5, Assam 2, N. W. F. Province 1, Orissa 2 and Sind 2.

from the beginning of provincial autonomy to certain provinces partly in the form of cash subventions and partly in the form of cancellation of the net debt incurred previous to April 1936, and partly in the form of distribution to the jute growing provinces of a further 12½ per cent, of the jute tax. the percentage allocated, within the first ten years of provincial autonomy. But this, he said, largely depended on the financial condition of the railways and their ability once again to contribute to general revenues. His remarks on this point were :-

> "The position of the railways is frankly disquieting. It is not enough to contemplate that in five years' time the railways may merely cease to be in deficit. Such a result would also tend to prejudice or delay the relief which the provinces are entitled to expect.

"I believe that both the early establishment Orissa is to get a further non-recurrent grant of effective co-ordination between the various modes of transport and the thorough going of Rs. 19 lakhs and Sind of Rs. 5 lakhs by six overhaul of railway expenditure in itself are equal steps beginning from the sixth year from vital elements in the whole provincial problem."

RECENT INDIAN FINANCE.

India, in common with other countries of the deterioration under Finance headings was world, felt the full force of the economic blizzard worm, tent the till force of the coording Dizzard [153, 376] lakins and on commercial departments which began in 1930 and attained its maximum the following year. The net result from of Rs. 118 lakins. This meant a total deterioration the Government of India's point of view estimates for the current year, and as those was the introduction during 1931 of two Budgets, the ordinary Budget in the spring deficit would be Rs. 17.24 crores. To meet of the year and a supplementary Budget contains the supplementary Budg taining fresh taxation proposals in September. when Sir George Schuster faced the Legislative Assembly at the end of February, he had a sorry tale to tell. Trade depression, outpled with evil disobedience movement, had completely vitlated the estimates made for 1980-81. These estimates showed a surplus of Rs. 86 lakhs; the revised estimates worked upto a deficit of Rs. 13.56 crores, which the Finance Member said would remain uncovered and would be added had seriously vitiated the revenue estimates in the to the unproductive debt.

Rs. 376 lakhs and on commercial departments of Rs. 18.10 cross as compared with the budget estimates for the current year, and as those provided for a surplus of Rs. 86 lakhs the net deficit would be Rs. 17.24 cross. To meet this deficit the Finance Member announced a cut of Rs. 175 lakhs in army expenditure and retrenchment to the extent of Rs. 98 lakhs In civil expenditure, making a total saving of Rs. 273 lakhs. The estimated deficit was reduced thereby to Rs. 14.51 crores, which he proposed to cover by fresh taxation.

Supplementary Budget.—It soon became evident that the worsening of the trade depression February budget, and in September Sir George Turning to the estimates for 1931-32, the Schuster came before the Legislative Assembly Finance Member said they must face a fall in with a Supplementary Finance Bill. He tax revenue, as compared with the current proposed to deal with the situation on three Budget estimates, of no less than Rs. 13.16 distinct lines, firstly, to reduce expenditure; arcres, including a drop of Rs. 8 crores in Cussepondly, to impose an emergency out in salaries; toms and 4½ crores in income-tax. The total and thirdly, to impose fresh taxation.

The 1932-33 Budget.—Presenting the 1932-33 The 1937-33 Budget.—Shortly the story of budget on March 7, 1922, the Finance Member the 1937-38 Budget speech was that for the explained that the circumstances were somewhat year about to close an anticipated surplus The 1932-33 Budget .- Presenting the 1932-88 unusual. The supplementary budget had been of Rs. 6 lake had turned into a deficit of Rs. 197 introduced only six months earlier. He did not, lakes. This disappointment was largely due therefore, propose to ask the House at the present stage to approve any extensions or For the year about to open it was shown that

The 1933-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. He results for the two previous years. He estimated the general position for 1933-34 to be the same as for the current year, neither better nor worse, and in particular that India would be able to maintain the same purchasing power for commodities imported from abroad.

announced the imposition of an excise duty on sugar, a reduction in the silver import by 21 annas to 5 annas per ounce and the abolition of the export duty on raw hides. Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their losses by imposing a levy on matches at the rate of Rs. 2-4-0 per gross of boxes on matches made in British India. Favourable changes in postal and telegraph charges were announced.

The 1935-36 Budget.—This Budget was expected to show a surplus of Rs. 150 lakhs available for tax reduction. The Silver duty was reduced to 2 annas an ounce. The export duty on raw skins was abolished. The remaining on raw skins was abolished. The remaining surplus of Rs. 1,42 lakhs was disposed of, first, in restoring the emergency cuts in pay, and second, in taking off some of the surcharge on income-tax. This surcharge was reduced by one-third; the cost was Rs. 1,36 lakhs, leaving a nominal surplus of Rs. 6 lakhs.

The 1936-37 Budget.—In opening the 1936-37 budget the Finance Member announced that the final accounts for 1934-35 had exceeded the anticipated surplus of Rs. 327 lakhs and had actually provided a surplus of Rs. 4,95 lakhs. The revised forecast for 1935-36 also anticipated a surplus of Rs. 242 lakhs. For 1936-37 the revenue expected was Rs. 87,35 lakhs.

The Finance Member then announced that the remaining sum of Rs. 1,97 lakhs from 1935-36 would be transferred to a revenue reserve fund to help out the finances of the first year of Provincial Autonomy. The surplus for 1936-37 was estimated at Rs. 2,05 lakhs, and this was disposed of in two ways. First, the remaining surcharge on income-tax and supertax was cut by a half, leaving it at one-twelfth of the original figure: further, income-tax on incomes between Rs. 1,000 and Rs. 2,000 a year was abolished. Second, a postal concession was made by increasing the weight of the one-anna letter from half to one tola, and adopting a scale of an additional half-anna for every additional tola. The effect of these changes was to reduce the surplus to Rs. 7 lakhs.

present stage to approve any extensions of the plan for raising revenue which would have been Rs. 342 lakhs except which would have been Rs. 342 lakhs except for an amount available in the revenue reserve fund. This prospective deficit was met by a series of imports. The import and excise duties on sugar and silver were raised. On silver, both duties were raised from two annas an ounce to three annas an ounce. On sugar there was an increase in the excise duty on khandsari sugar from ten annas per cwt. to Rs. 1-5 per cwt., and on sugar other than khandsari or palmyra from Rs. 1-5 per cwt. to Rs. 2-0 per cwt. At the The 1934-35 Budget.—In order to provide an same time, the import duty on sugar was raised even balance for 1934-35 it was necessary to from Rs. 9-1-0 per cwt. to the rate at which the find means of improving the position to the excise duty was leviable on sugar other than extent of Rs. 153 lakhs. The Finance Member Further, the existing salt duty which was due to expire was continued for another year. Lastly certain changes were introduced in the postal rates for book-pattern and sample packets, and for parcels. The existing rates of income-tax and super-tax were continued for a further period of a year.

The 1938-39 Budget .- Introducing the 1938-39 Budget, the Finance Member explained that expenditure for the year about to close had been increased through the cost of military operations made necessary in Waziristan which totalled Rs. 176 lakhs. The results showed that the financial year would require Rs. 109 lakhs from Revenue Reserve Fund to balance the Budget. When it was introduced the estimate was for a nominal surplus of Rs. 7 lakhs after utilising the whole of the Revenue Reserve Fund of Rs. 184 lakhs.

Revenue for 1938-39 was expected to be Rs. 85,92 lakhs, with expenditure at Rs. 85.88 lakhs, leaving a surplus of Rs. 9 lakhs. No changes in the taxation system were proposed, so that the 1938-39 Budget was generally regarded as a status quo budget, although it had certain special features in respect of defence expenditure and the financing of provincial autonomy.

Defence.—The outstanding feature of the Budget was the increase in defence expenditure. Rs. 38 lakhs of increase was to be taken from the ordinary revenue. An additional sum of Bs. 80 lakhs was to be expended representing a free balance in the Defence Reserve Fund and balances in the military expenditure equalisation funds not immediately required. This sum would finance improvements in India's coastal defences, the erection of a factory to make India self-sufficient in the matter of high explosives and would pay for a scheme of mechanisation of certain Indian units under consideration. The sum of £100,000 a year hitherto paid to the British Government towards the naval defence of India was no longer to be paid. British Government agreed to forego amount on condition that the Government of India maintained a seagoing fleet of not less than six modern escort vessels to be free to co-operate and, in addition, to fulfil their responsibility for local naval defence of Indian ports.

The Finance Member's chief aims in connection with the 1938-39 Budget were to find the money required to pay for the inauguration of Provincial autonomy and to hand over to the Provinces as large a share of revenue as possible, while at the same time safeguarding the Central finances on which the progress and prosperity of the Centre and the Provinces alike depend. While the and the Frovinces aime depend, while the separation of Burma caused a net loss of Rs. 2\(\frac{1}{2}\) crores, the payments to the Provinces under the Neimeyer Award had that year amounted to Rs. 1,98 lakhs. Thus to start the Provinces in a sound state their previous debts to the Centre were to a considerable extent cancelled and the remainder consolidated at a lower rate of interest, at a loss to the Centre, but of course with a corresponding gain to the Provinces of about a crore. Additional grants-in-aid to deficit Provinces amounted to Rs. 56 lakhs and there were additional payments from the proceeds of the jute duty of Rs. 54 lakhs besides Rs.2,19 iakhs on account of the original 50 per cent, of this duty. Then with the improvement in railway revenues a start was made on the distribution of income-tax receipts to the Provinces—Rs. 1,38 lakhs in 1938-39 and an expected Rs.1,28 lakhs in 1939-40.

With only a nominal surplus at the end of 1938-39 there could be no question of reducing taxation. Nor could any further central grants be afforded for rural development, Since the main responsibility for social and economic betterment had devolved on the Provinces, the Centre's primary obligation was to hand over as much revenue as possible to the Pro-vincial Governments for them to spend on their own schemes of rural development and on other ameliorative measures. A good start was made that year and the steps taken to ensure the soundness of the Central finances were designed to provide for the continuance of the task of releasing 7 crores of income-tax to the Provinces to the fullest extent possible.

The 1939-46 Budget.—Presenting the 1939-40 Budget, the Finance Member stated that the position as at March 31, 1939 disclosed a net deficit of Bs.2,65 lakhs. This would be met out of the sum of Rs.3,00 lakhs provided in the 1938-39 Budget for reduction or avoidance of debt, which meant that there would be virtually no debt repayment from revenue during the year about to close, though fortunately there would be no net addition to indebtedness. The basic reason for the deficit was the trade recession during the past year which had resulted in a drop in receipts from Customs Puties of Rs. 3,67 lakhs. On the Expenditure side there was a net diminution of Rs. 1,18 lakhs, made up of a reduction of Rs. 18 lakhs in Civil Estimates counterbalanced by an increase of Rs. 1,00 lakhs in Defence Services. Increased receipts came from Central Excise Duties, Corporation Tax, Taxes on Income and Oplum Duties; decreases were recorded by Currency and Mint, and Railways' contribution. The net result was as stated above.

with the Royal Navy for the defence of India Rs. 82,15 lakhs as compared to Rs. 83,00 lakhs in the revised estimates for the past year. Customs Duties were estimated to yield Rs.40.10 lakhs as against the last year's revised estimates of Rs. 40,14 laklis. The former figure allowed for a sum of Rs.39 lakhs payable to the States of Cochin and Travancore as their share of the customs revenue of Cochin Port, so they were really budgeting under customs for an increase of Rs.35 lakhs. The estimate for Central Excise duties, at Rs.8,28 lakhs, followed the previous revised estimates with minor variations. The main component of this figure was Rs.4,00 lakhs from the duty on sugar. As a result of a proposed change in the system of levying excise on khandsari sugar, an increase of Rs.51 lakhs was expected under this head, this increase being included in the previous figure of Rs. 4,00 lakha

> The new system of income-tax, based upon the Income-Tax (Amendment) Act and the " slab system" of assessment (for details of which see under "Income Tax") was expected to yield an increase of Rs.1,31 lakhs over the previous year. But after allowing for the decline in trade the net increase would be only Rs.50 lakhs. The Posts and Telegraphs Department, it was anticipated, would produce an extra Rs.12 lakhs over the year 1938-39.

> Expenditure.—On the Expenditure side, the total figure was Rs.82,65 lakhs, or Rs.8,00 lakhs iess than the revised estimates for the previous year. This was largely explained by decreases of Rs.1,73 lakhs under Interest Charges and Rs.1,00 lakhs under Defence, coupled with the continuance of certain economy measures. The Defence Budget stood at Rs.45,18 lakhs, the reduction already mentioned being due to three heads ' (1) The receipt of an additional £500,000 under the Garran contribution from the British Exchequer; (2) The transfer to the Imperial Establishment of four British Battalions, one Cavairy Regiment and five Tank Companies and (3) Drawing on military Sinking Funds to the extent of Rs.49 lakhs. Under Interest Charges, savings were possible through reduced bonuses payable on Post Office Cash Certificates, and through a large scale conversion operation the previous summer. Thus, on the basis of the adoption of the new rates for income-tax, etc., and of the maintenance of existing taxation, the position as at March 31, 1940 would be as follows. Revenue, Rs.82,15 lakhs. Expenditure, Rs.82,65 lakhs. Prospective Deficit, Rs.50 lakhs.

> Changes.—This prospective deficit the Finance Member proposed to meet by an increase of 100 per cent. in the tariff duty on imported raw cotton. The previous duty was six pies per lb., it was raised to one anna per lb. As deseign cotton was entering the country at the rate of 700,000 bales per annum, this doubling of the duty was estimated to yield Rs.55 lakhs thus converting the prospective deficit into a nominal surplus of Rs.5 lakhs.

The other changes embodied in the Budget were the new rates of income-tax and super-tax drawn up on the "slab system," and a decrease in the exercise duty on khandsari sugar from one Revenue.—Turning to the financial year rupee to eight annas per cwt. At the same 1939-40, total revenue estimates amounted to time, the definition of "factory" in the Sugar Excise Duty Act was altered to omit any referlakhs. For the rest, it was provided that the ence to the number of men employed, thus existing inland postage rates and the existing bringing all khandsari factories within it and raising the actual yield from the excise by Rs.51 of one year.

WAYS AND MEANS.

The following is a summary of the estimates of ways and means in India during 1938-39 and 1939-40:—

THE LAND REVENUE.

The principle underlying the Land Revenue reviewed by the Civil Courts. It is the duty system in India has operated from time immediate the Government is the supreme landiord and the Government is the supreme landiord and future dispute, whether affecting the interests the revenue derived from the land is equivalent of the State or of the people. The intention to rent. On strict theoretical grounds, exists a literaction may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The former gives protection and legal security. latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual culti-vator. The Permanent Settlement was introvator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each ment of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occuthe Fermanent Settlement in Bengal the occu-pant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Stranbey's India (revised edition, 1911):—"He has to deter-mine the amount of the Government demand led to much simplification of the Settlement; the impost falls as low as 35 and even 25 per Officer's Proceedings, and to much greater cent, and only rarely at the proportion of one rapidity in the completion of the Settlements, half the rental exceeded. In regard to Ryos-All the work of the Settlement Officer is liable wart tracts it is impossible to give any figure to the supervision of superior officers, the that would be generally representative of the assessments proposed by him require the sanction Government's share. But one-fifth of the of the Government before they become final gross produce is the extreme limit, below in binding: and his judicial decisions may be which the incidence of the revenue charge

tenures fall into two classes-peasant-holdings and landlord-holdings, or Ryotwars and Zemia-dari tenures. Broadly speaking, the difference between the two in a fiscal sense is that in Ryotwar! tracts the ryot or cultivator pays the revenue direct; in Zemindari tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of Ryotvarr holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the vil-lage being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, ryotwari tenure is on an individual basis, and the Government is on an individual assis, and the dovernment enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by unearned incre-ment." The Government, however, may at a new settlement re-classity a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the and to make a record of all existing rights and class of tenure, and the character and circum-responsibilities in the land. He has a staff of stances of the holding. Under the Permanent experienced subordinates, almost all of whom stances of the holding. Under the Permanent of the district assigned to him is a work which formerly required several years of constant Southeast
demand. In reply to this memorial and other the words of the Resolution quoted above regresentations the Government of India (ford Curron being Viceroy) issued a Resolution and defence of their Land Revenue Policy, rented, impoverished, and oppressed."

In it was stated that "under the existing of the Resolution of t practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, to-gether with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In Zemindari tracts progressive moderation is the keynote of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in Ryotwari tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheap-ened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance-(a) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not per salum; (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the in-terests of tenants against landlords, and also cereses or tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punish Land Alleration Act to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, the following should be consulted by realiers passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which deriver and considerable groportion of its revenue that the land, to later in the interest of the land, to later in the interest of the considerable interests of the considerable proportion of its revenue that the land, to later in the interest of the land, to later the later of the land and progress. This Act greatly senting the classes. This Act greatly senting the alienation land & Co.; M. Joseph Challley's "Administration and Progress, 1911," (Macmilot the outlivator by problems of the land in payment of the later than the land the process by which the millan & Co.; 1910), and the Annual Administration of money-lenders. A good deal of legis-Government.

varies greatly. About sixteen years ago, the lation affecting land tenure has been pasted devernment of India were invited in an inflation time to time in other provinces, and it is a lating the lating and the lating the lating and the lating and the lating and the lating and the lating are lating as the maximum dovernment where under the Permanent sattlement (in

Government and Cultivator.

While the Government thus interferes hetween landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated:—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable unprontable lands) have thus been promane to the State no less than to the individual; whereas under a Zemindari or kindred system the State would have gained nothing, however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the ryots in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurungzebe from a much smaller Empire.

Since the coming into operation of provincial autonomy in April 1937, there has been a great impetus towards land revenue reform in most provinces, the primary object being to better the lot of the tenant by modifying Zemindari rights and usages, and by altering the system of land revenue assessment. To this end, legislation has been introduced in practically all the autonomous provinces during the years 1937 to 1939 and widespread changes are in process of being made everywhere,

The literature on the subject is considerable.

EXCISE.

The Excise revenue in British India is deriver from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum. braudy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the rotal receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Ont-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the stillhead duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete.

There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous pative pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called leries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangefrom the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been—

First: farms of large tracts: Second: farms of smaller areas: Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for dis-tilling and the like. The Provincial Govern-ments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the Heensed distil-lers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum stillhead duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

Reforms.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise was made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation.

Sap of the date, palmyra, and coccanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liqued and from shoplicense fees. In Bengal and Burma

the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandles and whiskles, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption.

PROHIBITION.

provincial Since the introduction of autonomy in April 1937, it has become the avowed policy in principle of all provincial Governments to discourage the consumption of alcoholic beverages; but the Congress administrations have gone further and have adopted an active policy of enforcing prohibition within a period of years. The measures taken by them have varied from province to province, but generally speaking, they have taken the form of declaring certain areas, either urban or rural, "dry, and within those areas the production, sale and consumption of liquor has been banned. Thus in Madras, the Salem district has been declared "dry"; a special excise regime has been set up and active steps are being taken to wean the populace from the use of liquor. Early reports indicated that a considerable measure of success had been attained, but more recently it has been officially admitted that "enthusiasm for prohibition is waning." In the United Provinces, Bihar, Orissa, the Central Provinces and Assam, similar steps are being taken to prevent the people of certain areas from drinking alcohol

In Bombay, the experiment (although the Government decline to regard the scheme as experimental, holding it to be their settled policy) has gone a stage further. The second largest city in the province, Ahmedabad, has been officially "dry" since September 1938, and it has been announced that the capital, Bombay, is to go "dry" as from August 1939. In each case a system of personal permits is allowed. In Ahmedabad, these permits, giving the right to consume a limited number of "units" of alcohol a month, are granted to Europeans and "confirmed addicts." In Bombay, it is proposed to restrict "permits" to persons of non-Asiatic domicile, though an appeal has been made even to them to conform to Indian sentiment on the subject. In Madras, newspapers and magazines published within the province are forbidden to publish liquor advertisements; in Bombay, Government propose to enact a similar law.

Although Excise is a provincial subject, it may be noted that foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff. The proceeds of this duty go to the Government of India, and there is as yet no indication that the Central authorities have adopted prohibition as a general principle. Indeed, the prospects are that the provinces which favour prohibition will have their own enforcement without the active assistance of the Central Customs Department at the ports. Thus the cost of enforcement, already high, may be increased by the need to employ a special Customs preventive staff controlled by the provinces concerned. As to the financial implications of Prohibition, they are far-reaching. In Bombay Province alone,

Government propose during the year 1939-40 to sacrifice a revenue of Rs. 1,40 lakhs derived from Excise, while in a full year the sacrifice will be in the neighbourhood of Rs. 250 lakhs (for total prohibition in the province), or about a quarter of the whole provincial revenue. This loss it is proposed to make good by a series of new taxation measures. A further complication is caused by the existence of Indian States, whose territory is inextricable mingled with British India, which have not yet adopted a prohibitionist policy. The Congress Governments rely upon their co-operation to prevent smuggling, but the fact remains that in many States alcohol is manufactured on a large scale and forms a considerable proportion of the State revenues.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant cnaras, or the resinous matter which forms an active drug when collected separately; and bhang, or the dried leaves of the hemp plant whether reale or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

Opium.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of suction sales in Calcutts to traders for export to foreign countries having been stopped with effect from 7th April 1928. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It was decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent. annually in each subsequent year until exports were totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply; rock salt from the Salt range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Raiputana, sait brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contain an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara sait. Important works for the manufacture of that salt were opened in Dhrangadhra State in that saft were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengai render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Livernool, Germany Aden, Bombay and Madras. Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous sait manufactured by Government Agency, and the same.

The sait revenue was inherited by the British remainder under license and excise systems. overnment from Native rule, together with a In the Punjab and Rajputana the sait manufactories are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactories are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun. on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

> From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Re. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent., between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Re. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 29th Septemher 1931. It was raised to Rs. 1-9-0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on sait were always kept similar, but by the Indian Sait (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 41 annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by 2 annas. In April 1936 the import duty was reduced to 11 annas per is maund, while the excise duty remained the

CUSTOMS.

The import duties have varied from time to time according to the financial condition of lians specially chosen for this duty, before the the country. Before the Mutiny they were infroduction of the Imperial Customs Service in five per cent.; in the days of financial stringency | 1906. Since that date, of the five Collectorship the country. Before the Mutmy they were introduction of the imperial customs between the five per cent.; in the days of financial stringency 1906. Since that date, of the five Collectorship which followed they were raised to 10 and in a 5the principal ports (Calcutta, Bombay, Madras, some cases 20 per cent. In 1875 they were Rangoon, and Karachi) three are ordinarily reduced to five per cent; but the opinions of Free Traders, and the agitation of Lancashire venanted Civillans"). The other two are manufacturers who felt the competition of the reserved for members of the Inperial Customs Indian Mills, induced a movement which led to Service. the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were reimposed.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (a) from members of the Indian Civil Service-3 vacancies, and (b) by the Secretary of State—19 vacan-cies. There are in addition a few Gazetted Officers in what is known as the Provinctal Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service; The "subordinate" staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in changes have from time to time been made in India in 1860, in order to meet the financial the system, and the present schedule was condisiocation caused by the Mutiny. It was isolidated in the Act of 1886. This imposed a levied at the rate of four per cent. or a tax on all incomes derived from sources other little more than 94d. In the pound on all incomes it than agriculture which were exempted. On of five hundred rupees and upwards. Many incomes of 2,000 rupees and upwards it fell

at the rate of five ples in the rupee, or about to meet the emergency of that year. 61d. in the pound; on incomes between 500 and surcharges were subsequently scaled down in 2 000 rupees at the rate of four pies in the rupee or about 5d. In the pound. In March 1908 abolished until after the passage of the Income the minimum taxable income was raised from Tax (Amendment) Act of 1939. That Act itself 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income-Tax as a means of raising fresh revenue.

The Supplementary Finance Bill of 1931 imposed surcharges on income-tax and super-tax India Budget of 1939.

succeeding years, but were not completely was the sequel to an exhaustive inquiry from 1935 onwards by a committee consisting of Khan Bahadur J. B. Vachha, C.I.E., Commissioner of Income-Tax in Bombay, and Messrs. C. W. Auers and S. P. Chambers of the British Inland Revenue Department. Their report covered a wide field and made numerous recommendations. most of which were incorporated in the Act of 1939, a summary of which is given below. Among other recommendations was that for the adoption of the "slab" system instead of the "step" system, and this was duly done in the

RATES OF INCOME-TAX.

BASED ON SLAB SYSTEM.

INCOME-TAX

(a) Individuals, Unregistered Firms, Hindu Undivided Families and Associations of persons (other than Companies).-

					Rate.
First	Rs.	1,500	of	income	Nil.
Next	,,	3,500	,,	,,	9 pies in the rupee.

Balar	ce of income	7 annas in the rupee.

(b) Companies and local authorities .-

1 anna in the rupee on the whole income (no exempted slab). No surcharge is charged in respect of either Income-Tax or Super-tax.

INCOME_TAX REFORMS.

As already mentioned, the publication of the Income-Tax Inquiry Report in 1936 was followed by important reforms and far-reaching legislation. Among the reforms was the bringing into force, as from April 1, 1939, of the "slab" system of income-tax assessment, details of which are given in the foregoing table. The post of Income-Tax Officer to the Government of India was created and Mr. S. P. Chambers was appointed to it.

The new Income-Tax (Amendment) Act of 1939, which was passed after protracted debate in and much modification by the Central Legislature, was intended to bring up to date the procedure of the Income-Tax Department and to render its methods more efficient. It embodied provisions designed to stop up existing loopholes and prevent evasion of income-tax law: also to adjust categories of income-tax payers so as to mulct the wealthy minority more while giving relief to the small man. The chief operative clause was Clause 4, the provisions of which are :---

In respect of foreign income, persons who are not resident in British India pay on income arising or received in British India only. Persons who are resident but not ordinarily resident in British India pay on income arising in British India and on foreign income brought into British India. Persons who are resident and ordinarily resident in British India pay on income arising in British India, on foreign income brought into British India, and also on foreign income not brought into India, with a deduction of Rs. 4,500 on the last mentioned class of income. Where foreign income-tax is payable on income arising abroad, one-half of the Indian tax, or one-half of the foreign tax, whichever is the lower, is allowed as a deduction from the tax payable. Where foreign income cannot be brought into India owing to exchange restrictions, the income-tax on that income is not collected until such time as it can be brought in.

As to the definitions of "residence", they are as follows: To be resident, a person must either be in British India for at least half the year or have a house maintained in British India and visit it at least once during the year, or have been in British India for at least 365 days out of the previous four years and visited British India at least once during the year. To be ordinarily resident, a person must have been resident for nine out of the previous ten years and must also have been in British India for 730 days in the previous seven years. A company is deemed to be resident in India if it is controlled in India or if more than half its income arises in British India.

Other important provisions of the Act are those providing for the setting up of an Appellate Tribunal (to start functioning after two years) whose personnel will consist of an equal number of judicial members and accountant members and whose purpose will be to hear appeals by assessees from the findings of the Assistant Commissioner of Income-Tax; relief to be granted in respect of life insurance premiums, provident fund contributions and superannuation contributions fund with special concessions to Michael and the contributions fund with special concessions to Michael and the contributions fund with special concessions to the contributions fund with special concessions to Hindu undivided families; the abolition of the previous exemption of leave salary, that is, salary earned in India but payable out of India salary earned in India but payable out of India to assesses while they are on leave out of the country; a changed system of depreciation allowance from the former prescribed percentage of the original cost of the asset to a prescribed percentage of the "written down value" of the asset; and finally, a most important change, extension of the liability to pay income-tax from all persons called upon by an income-tax officer to make a return, to all persons whose total income exceeded Rs. 2,000 in the previous year. This liability to pay income-tax becomes obligatory upon those whose incomes exceeded Rs. 2,000 in the previous year and failure to ask for and fill in a return form without reasonable for and fill in a return form without reasonable cause involves a liability which may be as much as one and a half times the tax payable.

HISTORY OF THE COINAGE.

The Indian mints were closed to the un-the gold accumulated in the Paper Currency stricted coinage of silver for the public from Reserve. In that and the following month a restricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for including the rupees issued in connection with the colnage at the mints for the public of gold the conversion of the currencles of Native and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with a separate fund called the Gold Reserve Fund

crore of rupees was coined and over 17 crores of rupees in the year ending the 81st March 1910 States. From the profit accruing to Government on the coinage it was decided to constitute the Native States of Rhopai and Kashmir, the as the mort effective guarantee against tempo-currency of those States was replaced by Gov-rary fluctuations of exchange. The whole ernment rupees. The re-coinage of these profit was invested in storling securities, the rupees proceeded through the two years 1897 interest from which was added to the fund. In and 1898. In 1899 there was no coinage of 1906 exchange had been practically stable for rupees; but in the following year it seemed that eight years, and it was decided that of the coinage was necessary, and it was begun in coinage profits devoted to this fund, six crores February 1600, the Government purchasing the should be kept in rupees in India, instead of silver required, and paying for mainly with being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the Royal Mint at Bombay. It stated:—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be in-curred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new coins of the nominal value of Rs. 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,205,372 sovereigns were coined dur-ing the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established an ew ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten ples per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine skity-fourths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard in September 1931 but the buying and solling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of "Beld by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 5,000 bunces of raw gold.

Silver.

The weight and fineness of the silver coin

_	FINE SILVER grains.	ALLOY grains.	TOTAL grains.
Rupee	165	15	180
Half-rupee	82}	71	90
Quarter-rupee or 4- anna piece	411	31	45
Eighth of a rupee or 2-anna piece	20	12	221

One rupee = 165 grains of fine silver. One shilling = 80_{1}^{4} grains of fine silver. One rupee = shillings 2 0439.

Copper and Bronze.

Copper coinage was introduced into the Bengal Prosidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows:—

	troy.
Double pice or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna	50
Pie being one-third of a pice or one-	

a. 10 a.s 10.10	, ,, , , , , , , , , , , , , , , , , , ,		Standard weight in grains troy.	Diameter in milli- metres.
Pice			75	25.4
Half-pice		٠.	371	21 15
Pie			25	17.45
		N	ickel.	

The Act of 1906 also provided for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres and its least diameter 19 8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel has been withdrawn from circulation. In March 1939, it was announced that a new half-anna coin was to be introduced about September in the same year. The coin will be of cupro-nickel, of the same design as the square-cut two-anna nickelpiece, but much smaller in size.

The Currency System.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these pay-ments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the un-restricted coinnge of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees the to pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II. THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupes should be fixed at one shilling and four-pence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should (reely circulateside by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately elevenpence halfpenny, and they were sold to the public at one and four pence, the profits were consider-able; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupes.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and four-pence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contenplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of builton or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold

circulation to support the gold standard, gold tended to accumulate in India in embarrasing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—thatisto say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial relisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient

for the Secretary of State to stop selling Council Bills, and it would firm up ; meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent domand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirtyseconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirty seconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. to the extent of between eight and nine millions sterling were sold, which regularied the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold Import point by the unlimited sale of Council Bills at gold point in London; it was prevented from failing below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

III. THE CHAMBERLAIN COMMITTEE.

This brings us to the year 1913. There were many critica of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupes. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expendi-ture; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in sliver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were

lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the obiter dicta of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in The Times, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of sliver for coining purposes from Messra.

Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairman-ship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limits should be fixed to the

amount of the Gold Standard Reserve, one-half of which should be held in gold; that the silver branch of the Gold Standard Reserve should be aboliahed; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt in conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a

passing commendation to the idea of a State Bank. Sir James Begble, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR.

The report was in the hands of the Government | of India shortly before the outbreak of the war. Someimmediatesteps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000 being sold up to the end of January There were withdrawais from the Post office Savings Banks, and a net sum of Rs. 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver.

If we take the three years 1916-17 to 1918-19
the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom. chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27‡ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control confining remittance to the finance of articles of rational importance. The next step was to raise the rate for the sale of Council Bilis, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

Date of Introduction.		Minimum Rate for Immediate Telegraphic Transfers.	
3rd January 1917		1	41
28th August 1917		1	5
12th April 1918		1	6

15th September 1919		2	0
22ad November 1919		2	2
12th December 1919)	2	4

V. THE 1919 COMMITTEE.

The effect of these measures however was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below:—

(i) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(66) The reduction of the fineness or weight of the rupes, the issue of 2 or 8-rupes coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(iii) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconverti-

ble cannot be entertained.

(ir) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices. has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(v) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at

a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(vi) The development of Indian industry would not be seriously hampered by a high rate

of exchange.

(vii) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(viii) To postpone fixing a stable rate of exchange would be open to serious criticism and

entail prolongation of Government control.

(ix) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of

sterling. The stable relation to be established bet-(x)ween the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words at the rate of one rupee for 11'80,016 grains of fine gold, both for foreign exchange and for

internal circulation.

If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills; (b) abstention from purchase of silver; (e) use of gold to meet demands for metal-lic currency. If it should be absolutely neces-sary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(xii) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term There is no obligation to sell drafts to meet all trade demands; but, if without inservenience or with advantage the Secretary of state is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists. there is no objection to his doing se, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary, but when sterling is again equivalent to gold, it will remain uniform.

The Government of Indiashould be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(xiii) The import and export of gold to and from India should be free from Government control.

(xiv) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities. with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(xv) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substi-tuting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coluing purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold : all other recommendations are subsidiary thereto. But in this they were not unanimous; an important member of the Committee, Mr. Dadiba Dalai, of Bombay, appended a minority report in which he urged the adoption of the following courses:—

- (a) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohur with rupess related thereto at the ratio of 15 to 1.
- (b) Free and unfettered imports and exports by the public of gold builion and gold coins.
- (c) Free and unfettered imports and exports by the public of silver bullion and silver coins.
- The existing silver rupees of 165 grains of fine sliver at present in circulation to continue full legal tender.

- (s) As long as the price of sliver in New York is over 92 cents, Government should not manufacture sliver rupees containing 165 grains fine sliver.
- (f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.
- (g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(h) "Reverse" drafts on London to be sold

(h) "Reverse" drafts on London to be sold only at 1s. 329-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below is. 43-32d, per rupes.

VI. THE TWO SHILLING RUPEE.

The fundamental recommendation of the Committee was that the rupee should belinked to gold and not to sterling, in view of the decline in the value of sterling; that it should be linked at the rate of two shillings instead of the standard value, one and fourpence: all other recom-mendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupes debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the gilver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted .- The Currency Committee's Report was signed in December 1919. but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue. the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest ductnations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Beverse Councils in India at gold export point to prevent exchange from failing below the official standard. Now when the

Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchanges, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factorin the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange; the market rate jumped up to two shillings light pence.

Effect of the Rise.—The effect of a rise in schange has been well described in the words of the Currency Committee's Report; it is that a rising exchangestimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding oredit. The only Indian staples which were in demand over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong, orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled a important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

chesked the export of Indian cotton. Japan is interest buyer of Indian cotton, and when her interchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came lato the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure.—Government strug-gled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence halfpenny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addi-tion to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators profits. Considerable groups of speculators pooled their resources and followed the same In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Countils and the laws and the smallest allotment cils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Governments announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-chirty abconds. But this had little practical effect. The tiddings for Reverse Councils continued on a pary big scale and the market rate for exchange was always twopence or three pence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures .- Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the above the threat during a light of the commendations of the Currency Committee. the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one; due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent, of the Note Issue, the invested portion being limited to Rs. 20 erores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached \$40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a failing exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. Twe very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange southed the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the last of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade ; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reverse Councils before abandoning

their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India was Rs. 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamiathis expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII. COMMISSION OF 1925-26.

period of great caution in dealing with Indian theless the Committee arrived lowed. Left alone Exchange established itself 1st, 1926. round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in Presidency Banks were merged in the Imperial Bank of Indian a State Bank in all but name, and the Bank entered into a contract Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasti-city was established in the currency by the power to issue emergency currency up to Rs. 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now pur-chases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and staved there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupes remained on the statute book, the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strong legal tender, and should be ly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative; a resolution was passed in the made as to the form of the note.

These unfortunate experiments induced a Assembly hostile to the whole body. Neverourroncy. The currency quacks having had their in November 1925 and took evidence in way, and proved their ignorance, went out of bellil, Bombay and Calcutta. It salled for the field, and the wholesome policy of leaving the field, and the wholesome policy of leaving the field of the field o

> The main recommendations of this Commission are summarised in the actual report in the following terms, and they are textually reproduced in order that they may be above question:-

- The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.
- (ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the estab-lishment of a Central Banking system.
- (iii) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.
- (iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.
- (v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.
- (vi) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.
- (vii) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government Treasuries.
- (viii) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the A suggestion is

- (iz) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.
- (z) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested
- (xi) The legal tender quality of the sovereign and the half-sovereign should be removed.
- (xii) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.
- (xiii) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.
- (xiv) One-rupee notes should be re-introduced and should be full legal tender.
- (xv) Notes other than the one-rupee note should be legally convertible into legal tender money, i.e., into notes of smaller denomination or sliver rupees at the option of the currency authority.
- (xvi) No change should be made in the legal tender character of the silver rupee.
- (zvii) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.
- (xviii) The proportional reserve system should be adopted. Gold and gold securities ahould form not less than 40 per cent. of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent. of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.
- (xix) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.
- (zz) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.
- (23) A figure of Rs. 50 crores has been out the Government of fixed as the liability in respect of the contractification in the rupee circulation. Recommendations are made to secure that an amount equal that the efforts were expected to one-fith of the face value of any increase consider Secretaries of State or decrease in the number of allver rupees in some which was often

- issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.
- (xxii) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.
- (xziii) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conductve to smooth working.
- (zziv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.
- (xxv) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all barks operating in India, should be centralised in the hands of the Reserve Bank, Section 23 of the Government of India Act should be amended accordingly.
- (xxri) The transfer of Reserve assets should the place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.
- (xxvii) During the transition period the currency authority (i.e., the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchauge at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.
- (xxviii) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.
- (xxtx) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.
- (xxx) Measures should be taken to promote the development of banking in India.
- (xxxi) Every effort should be made to remedy the deficiencies in the existing body of statistical data.
- A Minute of Dissent.—Whilst all the members of the Commission signed the report, one of their number, Sir Purshotamdas Thakordas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that the efforts were emasculated by successive Secretaries of State, who had in visome which was often called the Gold

no standard at all. On the question of the that may seriously shake the confidence of the Gold Standard, he stressed the importance people in the currency system recommended." of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his col-As for the proposed Reserve Bank, leagues. Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed gold. At that time the Government was pressed to stabilize at the then ratio, and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency, the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms :--

"I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold, which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s. 6d. is accepted and acted upon, India will be faced during the next few years with a disturbance in her economic organisawith a disturbance in her economic organisa-tion, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a dis-turbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, un-natural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1s. 6d., the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete.

Exchange Standard, but which was in effect the gold resources of the country to an extent

A Survey.—The official summary of the Report, and the summary of the minute of dissent, given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to The Bankers' Magazine by Sir Stanley Reed, Which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable, if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked:—

"What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams, who described it as a 'limping standard.' The Royal Com-mission declares that 'in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange. Later they show that 'the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency..... Under the Indian system, contraction is not, and never has been, automatic.

"However, the standard limped along until the third year of the war. The exchange value of the rupee was stable; prices adjusted themselves to the ratio; Indian trade and industry developed. From the narrow stand-point of profit and loss, the investment of the point of profit and loss, the investment of the reserves, instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at £17,962,466. But it had three great disadvantages: it did not inspire public confidence; it placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it; and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks, afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggeson this the order when allowance has been made for all misunders tandings and misapprehensions, the fact remains that a large measure of distrust in the present system is justified by its imperfections.

"There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely, it took the former alternative; the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Babing-ton Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event, but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent' ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920, and the two shilling rupes has since been a legal fiction. Left free from administrative action. the rupes fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards, and has been in the neighbour-hood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes realised in London that under these vicisations the indian standard has legally perished. In the words of the report, 'The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control.

"The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India, to link the rupes to that standard, and to provide for its statutory control, automa-tic working and stability; to bring the control of currency and of credit under a single autho-rity and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency.—"In the course of their inquiries in India the Commiscourse of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold buillon standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member. Sir Basil Blackett, whose work in India is of the greatest value.

"The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold builton in disposal of 200 crores of silver rupees, or 687 million fine ounces, in ten years; the acquisition in all of £103 millions of gold; and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1'12 crore.

"This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices, throughout the world. The reaction on the silver market from the dethronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs. 3 crores a year.

"The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds sher might require for her own development, it could hardly be expected to provide credits for a scheme which would unset the cold and for a scheme which would upset the gold and allver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution own recommendations. The internative evolution of a policy which promises a cure for India's currency bills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard.—"The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupes, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The easence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured Government to buy and sell gold bullion in deformance to buy and sell gold was labeled to put a gold coin in circulation; after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously sigble link between real, but conspicuously

"This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard; its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies it is desired to close. The gold buillon standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded; it involves the demonetization of the sovereign to which a sentimental influence attaches. But whilst it does not do those things, it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme, which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

"We must, however, face the obligation which a gold buillon standard imposes on the currency authority in India; indeed the Commission do not attempt to burke it. 'The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless. . . it has been undertaken by every other country that has adopted an effective gold standard; and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Covernment of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification, and at the time, which we specify.' It is important, therefore, to examine the reserves and

"The reserves held for the purpose of maintaining the value of the token currency are two-fold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows:—

Paper Currency Reserve.

			Rs.	Crore
Silver coin	••			77.0
Silver bullion	• •			7 · 7
Gold coin and bull	on			22.3
Rupee securities				57.1
Sterling securities	••	••	• •	21.0
			-	
				185 · 1

(The gold coin and builion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee.)

"The Gold Standard Reserve amounts at present to £40,000,000 invested in Gold and in British Treasury Bills and other sterling securities. "In theory the two reserves fulfil entirely different functions. The Paner Currency

"In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve, accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amaignmated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute; that gold and gold securities should form not less than 40 per cent. of the whole, with 50 to 60 per cent. as the ideal; and that the holding of gold, which now stands at about 12.8 per cent. should be raised to 20 per cent. as soon as possible, and to 25 per cent. in ten years. Generally, they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be acape.

"The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—"The majority of the Commission, Sir Purshotamdas Thakordas being the only dissentiont, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one 'shilling and sixpence to the rupee. Round this point controversy in India will be concentrated; it is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence; the Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August, 1917.

"One principle advanced in Sir Dadiba Dala!" prophetic minority report in 1919, that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible, which during the war would have been disastrous. I must retterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell: the attempt to stabilise the ruppe

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade; after it was abandoned in Sep-tember, 1920, the rupes fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession Thereafter, under the innence or a succession of abundant harvesta, it recovered. In 1923, it was one shilling and fourpence sterling; in Ocober, 1924 one and sixpence sterling and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

"It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four, the permanent standard might have been reestablished without undue disturbance. Sir Purshotamdas Thakordas asserts in his minute of dissent that 'the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. was appointed to question. Indeed, they have presented to us the issue in this regard as a fatt accompli, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country.

"It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India; as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation a true gold standard, statutory in its com-position and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the 'conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large, and as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage." shotamdas Thakordas, in a closely-reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

"The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence; no

Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent, of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

"Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half-way house; the rate must be either the de facto one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months, but of hours or minutes. There would be an immedi-ate rise in prices of twelve and a half per cent., with a consequent reduction of real wages by that proportion; there would be convulsive disturbance of the foreign trade; there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over-valued in the past; it is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six: the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Note Issue .- "Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency; the actual currency of India is a token, the silver rupees and another thinks is cover, the surer rupees and another token, the note convertible into rupees. Ever since the breakway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coining which followed recovery from the famine of 1899-1900; it compelled heavy surchass of 1899-1900; it compelled heavy surchass of 1899-1900; by the control of the co heavy purchases of silver, which invariably rose in prices as the Government came into the market : and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48d, an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or remay reform which must be taken sooner or this obligatory convertibility is likely to be so favourable at the present when, by making the new favourable at the present when, by making the new favourable into gold bars for all purposes, a more solid right of convertibility is attached to them than they have every had since allow a solid to has a solid his attached. had since silver ceased to be a reliable standard of value. Both propositions can be accepted in their entirety.

"The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself; it was always conratio could be operative for over a year without vertible on demand; but from increased facili-inducing this result. But it is clear that the ties for the encashment of notes, beginning with adjustments, especially in regard to wages in the introduction of universal notes of small denomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, 'and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them.' There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

"The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option; but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. Indis is suffering from a surfet of rupees, the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver hampered India for so market which has many years is exceptionally favourable, and should be seized without hesitation."

The reception of the Report followed very cleesly the lines indicated as probable in the article in The Bankers' Magazine which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the deaire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so ioud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency using reague.

with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of buillion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect:—

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The New Ratio.—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost or transport from Bombay to London. A rate of one shilling five pence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate. World trade depression in the last few years made it increasingly difficult for the Government of India to maintain the statutory ratio, but their difficulties were solved when Great Britain went off the Gold standard in September 1981, and the rupee was linked to sterling. By the end of the year exports of commercial gold from India had begun to show their effects, and on December 30 the T.T. rate had risen to $1/6\,{\rm rs}_5$ compared with $1/5\,{\rm g}_2^2$ on September 18.

The characters of the Reserves which are the backbone of the Indian currency system are shown overleaf.

THE RESERVE BANK.

received the assent of the Governor-General on

erens it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage;

and whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system :

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures;

It is hereby enacted as follows :-

- (1) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency trom the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of this Act.
- (2) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued.

Share Capital .- (1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

- those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.
- (3) A shareholder shall be qualified to be regis-tered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register; and no be associated with the Central Board for the person who is not-
- (s) domiciled in India and either an Indian subject of His Majesty, or a subject of a State in India, or
- (b) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty
- (e) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, than one-fifth of the number of shares assigned or any other law for the time being in force in to the register, the Central Board shall slice the

The following Act of the Indian Legislature or a scheduled bank, or a corporation or comreceived the assent of the Governor-General on pany incorporated by or under an Act of Parliament or any law for the time being in force
Bank of India Act, 1934:—

Bank of India Act, 1934:—

Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India, and having a Dranch in Driggs Anus, shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the winder of a shareholder otherwise. any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

- The Governor-General in Council shall, by notification in the Gazette of India, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (b) and (c) of sub-section (8) to be the Parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists.
- (5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely :-
- (a) to the Bombay register-one hundred and forty lakhs of rupees :
- (b) to the Calcutta register-one hundred and forty-five lakhs of rupees :
- (c) to the Delhi register—one hundred and fifteen lakhs of rupees.
- (d) to the Madras register—seventy lakhs of rupees.
- (e) to the Rangoon register—thirty lakhs of rupees:

Provided that if at the first allotment the total nominal value of the shares on the Delhi (2) Separate registers of shareholders shall be less than one hundred and fifteen lakhs of (2) coparate registers, as defined in the First Schodule, in two equal portions to the Bombay and the Calcutta register.

- A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by nonofficial members of the respective Houses shall purpose of making public issue of shares and looking after the first allotment of shares.
- In allotting the shares assigned to a register, the Central Board shall, in the first instance allot five shares to each qualified applicant who has applied for five or more share; and, if the number of such applicants is greater than one-fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.
- British India relating to co-operative societies remaining shares firstly, up to the limit of one-

half of such remaining shares, to those applimay exercise all powers and do all acts and cauts who have applied for less than five shares. things which may be exercised or done by the and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

- (8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakes and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.
- (9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned.
- (10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9).
- (11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

Increase and reduction of share capital—(1) The share capital of the Bank may be increased or reduced on the recommendation of the Central Board, with the previous sanction of the Governor General in Council and with the approval of the Central Legislature, to such extent and in such manner as may be determined by the Bank in General meeting.

- (2) The additional shares so created shall be of the nominal value of one hundred rupees each and shall be assigned to the various registers in the same proportions as the shares con-stituting the original share capital.
- (3) Such additional shares shall be fully paid up, and the price at which they may be issued shall be fixed by the Central Board with the previous sanction of the Governor General in Council.
- (4) The provisions of section 4 relating to the manner of allotment of the shares constituting the original share capital shall apply to the allotment of such additional shares, and existing shareholders shall not enjoy any preferential right to the allotment of such additional shares.

 - (4) make loans or advances;
- (5) draw or accept bills payable otherwise than on demand:
- (6) allow interest on deposits or current accounts.

Central Banking Functions.

The Bank shall undertake to accept monies for account of the Secretary of State in Council and the Governor General in Council and such and the Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues and such States in India as may be approved of and notified by the Governor General in Council in the Gazette of India, and to make payments up to the amount standing to the credit of their accounts respectively, and to carry out their exchange, remittance and other banking operations, including the management of the public debt.

(1) The Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues shall entrust the Bank, on such conditions the same which all their tions as may be agreed upon, with all their money, remittance, exchange and banking transactions in India and, in particular, shall deposit free of interest all their cash balances with the Bank :

money transactions at places where the Bank has no branches or agencies, and the Governor General in Council and Local Governments may hold at such places such balances as they may require.

- (2) The Governor General in Council and each Local Government shall entrust the Bank on such conditions as may be agreed upon, with the management of the public debt and with the issue of any new loans.
- (8) In the event of any failure to reach agreement on the conditions reterred to in this section the Governor General in Council shall decide what the conditions shall be.
- (4) Any agreement made under this section to which the Governor General in Council or any Local Government is a party shall be laid, as soon as may be after it is made, before the Central Legislature and in the case of a Local Government before its local Legislature also.

Benk Notes.—(1) The Bank shall have the sole right to issue bank notes in British India, and may, for a period which shall be fixed by the Governor General in Council on the recommendation of the Central Board, issue currency notes of the Governor General in Council, and the provisions of this Act applicable to bank notes shall, unless a contrary intention appears, apply to all currency notes of the Governor General in Council or by the Bank in like manner as if such currency notes were bank notes, and references in this Act to bank notes shall be construed accordingly.

(2) On and from the date on which this Chapter comes into force the Governor General in Council shall not issue any currency notes.

Issue Department.—(1) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinatter defined in section 34.

(2) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve.

Bank notes shall be of the denominational uses of five rupees, ten rupees, fifty rupees, one hundred rupees, five hundred rupees, one thousand rupees and ten thousand rupees, unless otherwise directed by the Governor General in Council on the recommendation of the Central Board.

The design, form and material of bank notes shall be such as may be approved by the Governor General in Council after consideration of the recommendations made by the Central Board.

(1) Subject to the provisions of sub-section (2), every bank note shall be legal tender at any place in British India in payment or on account for the amount expressed therein, and shall be guaranteed by the Governor General in Council.

(2) On recommendation of the Central Board the Governor General in Council may by notification in the Gazette of India, declare that with effect from such date as may be specified in the notification, any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank.

The Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Notwithstanding anything contained in any enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Governor General in Council or the Bank the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note:

Provided that the Bank may, with the previous sanction of the Governor General in Council, prescribe the circumstances in and the conditions and limitations subject to which the value of such currency notes or bank notes may be refunded as of grace and the rules made under this proviso shall be laid on the table of both Houses of the Central Legislature.

The Bank shall not be liable to the payment of any stamp duty under the Indian Stamp Act, 1899, in respect of bank notes issued by it.

- (1) If in the opinion of the Governor General in Council the Bank fails to carry out any of the obligations imposed on it by or under this Act, he may, by notification in the Gazette of India, declare the Central Board to be superseded, and thereafter the general superintendence and direction of the affairs of the Bank shall be entrusted to such agency as the Governor General in Council may determine, and such agency may exercise the powers and do all acts and things which may be exercised or done by the Central Board under this Act.
- (2) When action is taken under this section the Governor General in Council shall cause a full report of the circumstances leading to such action and of the action taken to be laid before the Central Legislature at the earliest possible opportunity and in any case within three months from the issue of the notification superseding the Board.

No person in British India other than the Bank or, as expressly authorized by this Act, the Governor General in Council shall draw, accept, make or issue any bill of exchange, hundi, promissory note or engagement for the payment of money payable to bearer on demand or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person:

Provided that cheques or drafts, including hundls, payable to bearer on demand or otherwise may be drawn on a person's account with a banker, shroff or agent.

- Any person contravening the provisions of section 31 shall be punishable with fine which may extend to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.
- (2) No prosecution under this section shall be instituted except on complaint made by the Bank.

Assets of the Issue Department.

- (1) The assets of the Issue Department shall consist of gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined.
- (2) Of the total amount of the assets, not less than two-fifths shall consist of gold coin. gold bullion or sterling securities:

Provided that the amount of gold coin and gold bullion shall not at any time be less than forty crores of rupees in value.

The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes payable in British India as are eligible for purchase by the Bank under sub-clause (a) or sub-clause (b) of clause (2) of section 17 or under clause (1) of section 18:

Provided that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the assets or fifty crores of rupees, whichever amount is greater, or, with the previous sanc-tion of the Governor General in Council, such amount plus a sum of ten crores of rupees.

- (4) For the purposes of this section, gold coin and gold bullion shall be valued at 8.47512 grains of fine gold per rupee, rupee coln shall be valued at its face value, and securities shall be valued at the market rate for the time being obtaining.
- (5) Of the gold coin and gold bullion held assets, not less than seventeen-twentieths shall be held in British India, and all gold coin and gold bullion held as assets shall be held in the custody of the Bank or its agencies :

Provided that gold belonging to the Bank which is in any other bank or in any mint or treasury or in transit may be reckoned as past of the assets.

- (6) For the purposes of this section, the sterling securities which may be held as part of the assets shall be securities of any of the following kinds payable in the currency of the United Kingdom, namely :--
- (a) balances at the credit of the Issue Department with the Bank of England;
- (b) bills of exchange bearing two or more good signatures and drawn on and payable at any place in the United Kingdom and having a maturity not exceeding ninety days :
- (c) government securities of the United Kingdom maturing within five years:

Provided that, for a period of two years from the date on which this Chapter comes into force, any of such last mentioned securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding

amount of the currency notes of the Government of India and bank notes for the time being in circulation.

(2) For the purposes of this section any currency note of the Government of India or bank note which has not been presented for payment within forty years from the lat day of April following the date of its issue shall be deemed not to be in circulation, and the value thereof shall, notwithstanding anything con-tained in sub-section (2) of section 23, be paid by the Issue Department to the Governor General in Council or the Banking Department, as the case may be; but any such note, if subse-quently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor General in Council.

On the date on which this Chapter comes into force the Issue Department shall take over from the Governor General in Council the liability for all the currency notes of the Government of India for the time being in circulation and the Governor General in Council shall transfer to the Issue Department gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin, bullion and securities shall be transferred in such proportion as to comply with the requirements of section 33:

Provided that the total amount of the gold coin, gold bullion and sterling securities so transferred shall not be less than one-half of the whole amount transferred, and that the amount of rupee coin so transferred shall not exceed fifty crores of rupees :

Provided further that the whole of the gold coin and gold bullion held by the Governor General in Council in the gold standard reserve and the paper currency reserve at the time of transfer shall be so transferred.

 After the close of any financial year which the minimum amount of rupee coin held in the assets, as shown in any of the weekly accounts of the Issue Department for that year prescribed under sub-section (1) of section 58, is greater than fifty crores of rupees or one-sixth of the total amount of the assets as shown in that account, whichever may be the greater the Bank may deliver to the Governor General in Council rupes coin up to the amount of such excess but not without his consent exceeding five crores of rupees, against payment of legal tender value in the form of bank notes, gold or securities :

Provided that if the Bank so desires and if the amount of gold coin, gold bullion and sterling securities in the assets does not at that time exceed one-half of the total assets, a proportion not exceeding two-fifths of such payment shall be in gold coin, gold bullion or such sterling securities as may be held as part of the assets under sub-section (6) of section 33.

period, dispose of such securities notwithstanding anything contained in section 17.

[LightWise of the Issue Department and in the saceta, as so shown, is less than fifty liabilities of the Issue Department shall be of the assets, as so shown, whichever may be

the greater the Governor General in Council shall deliver to the Bank rupee coin up to the smount of such deficiency, but not without its consent exceeding five crores of rupees, against payment of legal tender value.

(1) Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Governor General in Council, for periods not exceeding thirty days in the first instance, which may, with the like in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding fifteen days, hold as assets gold coin, gold bullion or sterling securi-ties of less aggregate amount than that required by sub-section (2) of section 33 and, whilst the holding is so reduced, the proviso to that sub-section shall cease to be operative:

Provided that the gold coin and gold bullion held as such assets shall not be reduced below the amount specified in the proviso to sub-section (2) of section 33 so long as any sterling securities remain held as such assets.

(2) In respect of any period during which the holding of gold coin, gold bullion and sterling securities is reduced under sub-section (1), the securities is reduced under sub-section (1), the Bank shall pay to the Governor General in Council a tax upon the amount by which such holding is reduced below the minimum "pre-scribed by sub-section (2) of section 35; and such tax shall be payable at the bank rate for the time being it force with an addition of the time being in force, with an addition of one per cent, per annum when such holding exceeds thirty-two and a half per cent, of the total amount of the assets and of a further one and a half per cent. per annum in respect of every further decrease, of two and a half per cent, or part of such decrease :

Provided that the tax shall not in any event be payable at a rate less than six per cent. per Anniini

The Governor General in Council shall undertake not to re-issue any rupee coin delivered under section 86 nor to put into circulation any rupees, except through the Bank and as provided in that section; and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of disculation or by delivery to the Governor General in Council under that section.

- (1) The Bank shall issue rupes coin on demand in exchange for bank notes and currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin which is legal tender under the Indian Coinage Act, 1906.
- (2) The Bank shall, in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or other coins which are legal tender under the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation; and the Governor General in Council shall supply such coins to the Bank on demand. If the Governor General in Council set any time fails to supply such coins, the Bank shall be released from its obligations to supply them to the public.

Obligation to cell storling.—The Bank shall sell, to any person who mikes a demand in that behalf at its office in Bombay, Calcutta.

Delhi, Madras or Rangoon and pays the purchase price in legal tender currency, sterling for immediate delivery in London, at a rate not below one shilling and five pence and forty nine sixty-fourths of a penny for a rupee:

Provided that no person shall be entitled to demand to buy an amount of sterling less than ten thousand pounds.

Obligation to buy sterling.—The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London, at a rate not higher than one shilling and six pence and three-sixteenths of a penny for a rupee:

Provided that no person shall be entitled to demand to sell an amount of sterling less than ten thousand pounds:

Provided further that no person shall be entitled to receive payment unless the Bank is satisfied that payment of the sterling in London has been made.

Cash reserves of scheduled banks.—(1) Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent, of the demand liabilities and two per cent, of the time liabilities of such bank in India as shown in the return referred to in sub-section (2).

Explanation .- For the purposes of this section liabilities shall not include the paid-up capital or the reserves, or any credit balance in the profits and loss account of the bank or the amount of any loan taken from the Reserve Bank.

- (2) Every scheduled bank shall send to the Governor General in Council and to the Bank a return signed by two responsible officers of such bank showing-
- (a) the amounts of its demand and time liabilities, respectively, in India,
- (b) the total amount held in India in currency notes of the Government of India and bank notes.
- (c) the amounts held in India in rupee coin and subsidiary coin, respectively,
- (d) the amounts of advances made and of bills discounted in India, respectively and
 - (e) the balance held at the Bank,

(*) the balance new at the balas, at the dose of business on each Friday or if Friday is a public holiday under the Negotiable Instruments Act, 1881, at the close of business on the preceding working day; and such return shall be sent not later than two working days after the date to which it relates :

Provided that where the Bank is satisfied that the furnishing of a weekly return under this sub-section is impracticable in the case of any scheduled bank by reason of the geographical position of the bank and its branches, the Bank may require such bank to furnish in lieu of a weekly return a monthly return to be dispatched not later than fourteen days after the end of the month to which it relates giving the details specified in this sub-section in respect of such bank a the close of business for the month,

- (3) If at the close of business on any day before the day fixed for the next return, the may be to such co-operative bank as if it were balance held at the Bank by any scheduled bank.

 A recorded to the minimum prescribed in subsection (1), such scheduled bank shall be liable to pay to the Bank in respect of each such day to pay to the Bank in respect of each such day penal interest at a rate three per cent. above the bank rate on the amount by which the balance with the Bank falls short of the prescribed minimum, and if on the day fixed for the next return such balance is still below for the next return such askance is still below the prescribed minimum as disclosed by this return, the rates of penal interest shall be increased to a rate five per cent. show the bank rate in respect of that day and each subsequent day on which the balance held at the Bank at the close of business on that day is below the prescribed minimum.
- (4) Any scheduled bank failing to compay with the provisions of sub-section (2) shall be liable to pay to the Governor General in Council or to the Bank, as the case may be, or to each, a penalty of one hundred rupees for each day during which the failure continues.
- (5) The penalties imposed by sub-sections (3) and (4) shall be payable on demand made by the Bank, and, in the event of a refusal by the defaulting bank to pay on such demand, may be levied by a direction of the principal Civil Court having jurisdiction in the area where an office of the defaulting bank is situated, such direction to be made only upon application made in this behalf to the Court by the Governor General in Council in the case of a failure to make a return under sub-section (2) to the Governor General in Council, or by the Bank with the previous sanction of the Governor General in Council in other cases.
- (6) The Governor General in Council shall, by notification in the Gazette of India, direct the inclusion in the Second Schedule of any bank not already so included which carries on the business of banking in British India and
- (a) has a paid-up capital and reserves of an aggregate value of not less than five lakhs of rupees, and
- (b) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913. or a corporation or a company incorporated by or under any law in force in any place outside British India.

and shall by a like notification direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid-up capital and reserve becomes at any time less than five lakhs of rupees, or which goes into liquidation or otherwise ceases to carry on banking business.

The Bank shall compile and shall cause to be published each week a consolidated statement showing the aggregate of the amounts under each clause of sub-section (2) of section 42 exhibited in the returns received from sche-duled banks under that section.

The Bank may require any provincial co-operative bank with which it has any transac-tions under section 17 to furnish the return referred to in sub-section (2) of section 42,

Agreement with the Imperial Bank—
(1) The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor General in Council, and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side, and shall further contain the provisions set forth in the Third Schedule:

Provided that the agreement shall be conditional on the maintenance of a sound financial position by the Imperial Bank and that if, in the opinion of the Central Board, the Imperial Bank has failed either to fulfil the conditions of the Agreement or to maintain a sound financial position, the Central Board shall make a recommendation to the Governor General in Council, and the Governor General in Council, after making such further enquiry as be thinks fit. may issue instructions to the Imperial Bank with reference either to the agreement or to any matter which in his opinion involves the security of the Government monies or the assets of the Issue Department in the custody of the Imperial Bank, and in the event of the Imperial Bank disregarding such instructions may declare the agreement to be terminated.

(2) The agreement referred to in sub-section (1) shall, as soon as may be after it is made, be laid before the Central Legislature.

General Provisions.

The Governor General in Council shall transfer to the Bank rupes securities of the value of five crores of rupees to be allocated by the Bank to the Reserve Fund.

After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent, per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Governor General in Council:

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(1) Notwithstanding anything contained in the Indian Income-tax Act, 1922, or any other enactment for the time being in force relating to income-tax or super-tax, the Bank shall not be liable to pay income-tax or super-tax on any of its income, profits ro gains.

Provided that nothing in this section shall referred to in sub-section (2) of section 42, affect the liability of any shareholder in respect and if it does so, the provisions of sub-sections of income-tax or super-tax. (2) For the purposes of section 18 of the Indian Income-tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income-tax any dividend paid under section 47 of this Act shall be deemed to be "Interest on Securities."

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under this Act.

- (1) Not less than two auditors shall be elected and their remuneration fixed at the annual general meeting. The auditors may be shareholders, but no Director or other officer of the Bank shall be eligible during his continuance in office. Any auditor shall be eligible for re-election on quitting office.
- (2) The first auditors of the Bank may be appointed by the Central Board before the first annual general meeting and, if so appointed, shall hold office only until that meeting. All auditors elected under this section shall severally be, and continue to act as, auditors until the first annual general meeting after their respective elections:

Provided that any casual vacancy in the office of any auditor elected under this section may be filled by the Central Board.

Without prejudice to anything contained in section 50, the Governor General in Council may at any time appoint the Auditor General or such auditors as he thinks fit to examine and report upon the accounts of the Bank.

Every auditor shall be supplied with a copy of the annual balance-sheet, and it shall be his duty to examine the same, together with the accounts and vouchers relating thereto; and every auditor-shall have allst delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor General in Council if appointed by him, employ accountants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank.

(2) The auditors shall make a report to the charcholders or to the Governor General in Council, as the case may be, upon the annual balance-sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Central Board, whether it has been given and whether it is satisfactory. Any such report made to the shareholders shall be read together with the report of the Central Board, at the annual general meeting.

Returns.—(1) The Bank shall prepare and transmit to the Governor General in Council a weekly account of the Issue Bepartment and of the Banking Department in the form set out in the Fifth Schedule or in such other form

- as the Governor General in Council may, be notification in the Gazette of India, prescrib. The Governor General in Council shall cam these accounts to be published weekly in the Gazette of India.
- (2) The Bank shall also, within two month from the date on which the annual account of the Bank are closed, transmit to the Governo General in Council a copy of the annual account signed by the Governor, the Deputy Governor and the Chief Accounting Officer of the Bank and certified by the auditors, together with report by the Central Board on the workin of the Bank throughout the year, and th Governor General in Council shall cause sucl accounts and report to be published in the Gazette of India.
- (3) The Bank shall also, within two month from the date on which the annual accounts of the Bank are closed, transmit to the Governo General in Council a statement showing the name, address and occupation of, and the number of shares held by, each shareholder of the Bank.

Agricultural Credit Department.—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

- (a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Governor General in Council, Local Governments, provincial cooperative banks, and other banking organisations.
- (b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks and any other banks or organisations engaged in the business of agricultural credit.
- (1) the Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into force, make to the Governor General in Council a report, with proposals, if it thinks fit, for legislation, on the following matters, namely:—
- (a) the extension of the provisions of this Act relating to scheduled banks to persons and dirms, not being scheduled banks, engaged in British India in the business of banking, and
- (b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank.
- (2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Governor General in Council.
- (1) The Local Board of any area may at any time require any shareholder who is registered on the register for that area to furnish to the Local Board within a specified time, not being leas than thirty days, a declaration, in such form as the Central Board may by regulations prescribe, giving particulars of all shares on the said register of which he is the owner.

- (2) If it appears from such declaration that any shareholder is not the owner of any shares which are registered in his name, the Local Board may amend the register accordingly.
- (3) If any person required to make a declaration under sub-section (1) fails to make such declaration within the specified time, the Local Board may make an entry against his name in the register recording such failure and directing that he shall have no right to vote, ither under section 9 or section 14, by reason of the shares registered in his name on that register.
- (4) Whoever makes a false statement in declaration furnished by him under subanv section (1) shall be deemed to have committed the offence of giving false evidence defined in section 191 of the Indian Penal Code, and shall be punishable under the second paragraph of section 193 of that Code.
- (5) Nothing contained in any declaration furnished under sub-section (1) shall operate to affect the Bank with notice of any trust, and no notice of any trust expressed, implied or constructive shall be entered on the register or be receivable by the Bank.
- (6) Until Local Boards have been constituted under section 9 the powers of a Local Board under this section shall be exercised by the Central Board in respect of any area for which a Local Board has not been constituted.
- (1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in liquidation save by order of the Governor General in Council and in such manner as he may direct,
- (2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor General in Council and the shareholders in the proportion of seventyfive per cent. and twenty-five per cent. respectively :
- Provided that the total amount payable to any shareholder under this section shall not exceed the paid-up value of the shares held by him by more than one per cent. for each year after the commencement of this Act subject to a maximum of twenty-five per cent.
- (1) The Central Board may, with the previous sanction of the Governor General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.
- (2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely :-
- (a) the holding and conduct of elections under this Act, including provisions for the holding of any elections according to the principle of proportional representation by means of the single transferable vote :
- (b) the final decision of doubts or disputes regarding the qualifications of candidates for in pursuance of a proclamation of His Majesty election or regarding the validity of elections; as a branch of His Majesty's Royal Mint, shall

- (c) the maintenance of the share register, the manner in which and the conditions subject to which shares may be held and transferred, and, generally, all matters relating to the rights and duties of shareholders;
- (d) the manner in which general meetings shall be convened, the procedure to be followed thereat and the manner in which votes may be exercised :
- (e) the manner in which notices may be served on behalf of the Bank upon shareholders or other persons :
- (f) the manner in which the business of the Central Board shall be transacted, and the procedure to be followed at meetings thereof:
- (g) the conduct of business of Local Boards and the delegation to such Boards of powers and functions :
- (h) the delegation of powers and functions of the Central Board to the Governor, or to Deputy Governors, Directors or officers of the Bank:
- (i) the formation of Committees of the Central Board, the delegation of powers and functions of the Central Board to such Committees, and the conduct of business in such Committees :
- (j) the constitution and management of staff and auperannuation funds for the officers and servants of the Bank;
- (k) the manner and form in which contracts binding on the Bank may be executed:
- (1) the provision of an official seal of the Bank and the manner and effect of its use :
- (m) the manner and form in which the balance-sheet of the Bank shall be drawn up and in which the accounts shall be maintained;
- (n) the remuneration of Directors of the Bank:
- (o) the relations of the scheduled banks with the Bank and the returns to be submitted by the scheduled banks to the Bank ;
- (p) the regulation of clearing-houses for the scheduled banks;
- (g) the circumstances in which, and the conditions and limitations subject to which the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded; and
- (r) generally, for the efficient conduct of the business of the Bank.
- (3) Copies of all regulations made under this section shall be available to the public on payment.
- In the Indian Coinage Act, 1906, for section 11 the following section shall be substituted, namely :-
- "11. Gold coins, coined at His Majesty's Royal Mint in England or at any mint established

not be legal tender in British India in payment or on account, but such coins shall be received by the Reserve Bank of India at its offices, branches and agencies in India at the bullion value of such coins calculated at the rate of 8.47512 grains troy of fine gold per rupee."

The Indian Paper Currency Act. 1923, the Indian Paper Currency (Amendment) Act, 1928, the Indian Paper Currency (Amendment) Act, 1925, and the Currency Act, 1927 are hereby repealed.

In sub-section (8) of section 11 of the Indian Companies Act, 1918, after the word "Royal" the words "Reserve Bank" shall be inserted.

The Reserve Bank began work with the opening of the financial year 1938-36. The Bank made a net profit of Rs. 53,42,100 for the year ended December 31, 1986.

Report for 1938.

The report of the Central Board of Directors of the Reserve Bank of India for the year ended December 31, 1938 states that after the payment of expenses of administration and provision for sundry Habilities and contingencies, the net profit amounts to Rs. 38, 45, 137. Of this amount, the sum of Rs. 17,50,000 will be utilised for payment to shareholders of a dividend at the rate of 8) per cent. per annum, being the cumulative rate fixed by the Governor-General in Council in accordance with section 47 of the Reserve Bank of India Act, 1934, leaving a surplus of Es. 20,95,137 for payment to the Governor-General in Council in accordance with the said Section.

Number of Shareholders.

The total number of shareholders has declined considerably since the inception of the Bank in April 1985. Another characteristic feature of the distribution of shares is the increase in the number in the Bombay area at the expense of other areas, principally Calcutta and Rangoon.

Under Section 14(8) of the Reserve Bank of and establishment charges alone as Rs. 34,33,565.

621

India Act, 1984, each share-holder has on vote for each five shares subject to a maximum of ten votes so that if this tendency continue blocks of shares might become concentrated in the hands of a few holders, with the effect of restricting the electorate and the risk of detracting from the representative character of the directorate chosen by it.

The Directors, therefore, reported the position to Government in 1937, with the suggestion that they might consider the limitation of the share that a holder may register in his name to a maximum of 200 shares. Up to March 1938, however, Government had taken an action on suggestion for the limitation of the maximum the holding of shares.

Bank Notes.

In January 1938 the Reserve Bank issued its own notes of the denominations of Rs. 5 and Rs. 10. This was followed later during the year by the issue of bank notes of the denominations of Rs. 100, Rs. 1,000 and Rs. 10,000. During the year under report the Bank also started the issue of Burma bank notes in new designs. of denominations similar to those in use in India.

Scheduled Banks.

The total number of scheduled banks increased from 54 to 57 during the course of the year. The advantages of contact with the central bank of the country are being increasingly recognised by the joint-stock banks. Their steady develop-ment was unfortunately marred by a local banking crisis in South India in June 1938, following upon the closure of the Travancore National and Quilon Bank. Despite this setback, total advances and discounts of scheduled banks rose from Rs. 114-87 crores to Rs. 118-91 crores.

I.- GENERAL.

Agricultural Conditions in India.—In spite unabated until the end of the financial year, of her rapid industrialization in the last 1937-38, and even in the beginning of 1938-39. nantly an agricultural country and her well-primary producers lay probably in the un-being greatly depends on the prosperity of her large agricultural population. In the depression started in 1936. which started at the end of 1929 agricultural and raw-material producing countries suffered Prices of most of the items of India's agricul-even more severely than industrial countries and tural production attained their maximum in the the Indian cultivator was in sore distress on

twenty-five years India still remains predomi- The causes of this reversal in the fortunes of the

the Indian cultivator was in sore distress on account of the disastrous slump in agricultural precipitously, the fall being 25 per cent. and pripes. When the upward movement started in which he was interested was painfully slow months. Thus, raw cotton declined from in which he was interested was painfully slow months. Thus, raw cotton declined from and halting and it was only in the middle of raw inte fell off in value from May 1937 to 1936 that primary commodities began their definite upward movement. As the year reached its highest level in April 1937 dropped advanced the rise almost became a boom, and primary prices rose to levels which they had primary prices rose to levels which they had of 1937 they had attained peak levels. But then they declined almost continuously, the these boom conditions were too artificial to last and April 1937 witnessed a sudden reversal of the below the highest level or 35 per cent. below the upward trend in business conditions. Prices level in March 1938 being 41 per cent. first part of 1937 and thereafter they declined and April 1937 witnessed a sudden reversal of the below the hignest level or 35 per cent. Delow the upward trend in business conditions. Prices level in March 1937. The price of rice was in the commodity and share markets fell sharply fairly steady throughout 1937-38 and the and confidence in the future was again rudely preceding year, and that of linseed was, on the shaken. The markets tried to steady them selves during the summer of 1937 after the during 1936-37. But these apparent deviations effects of the first shock were over and prices from the general trend were due to crop and of primary commodities railied to some extent, other factors peculiar to these commodities. But confidence could not be restored and from On the whole, the year under review witnessed October 1937 the markets became extremely a steep fall in the prices of India's staple agriculusteady and the downward trend continued tural products.

British India during 1937-38, compared with the preceding year, showed an expansion in imports result, the surplus of India's exports over imports of private merchandise in 1937-38 was very much reduced and amounted to Rs. 16 crores as compared with Rs. 51 crores in the preceding year. A large part of the increase in value of imports was due to a rise in the prices of imported commodities. In the case of exported commodities, prices also showed an advance. It has been roughly estimated that, compared with 1936-37, the volume of imports rose by 11 per cent., while the increase in value was of 23 per cent. On the export side, there was a decrease of 6 per cent. in volume, but of 2 per cent. in value.

The visible balance of trade as measured by statistics of private merchandise and treasure. was in favour of India to the extent of Rs. 30 crores as compared with Rs. 65 crores in 1936-The balance of remittances of funds in the year under review was minus Rs. 30 crores as compared with minus Rs. 71 crores in the preceding year. The figures relating to remittances estimated accurately.

Belance of Trade.—The overseas trade of | include the more important Government transaction tions, but do not take into account (a) net payments in India of British postal orders and of foreign money orders of countries which settle their accounts through London and (b) Government transfers on account of Iraq and Mauritius. The net payments in respect of the former amounted to Rs. 52 lakhs in 1937-38 as against Rs. 39 lakhs in the preceding year, while there were no transactions under the head during 1936-87 and 1937-38. Taking India including Burma as an economic unit for this purpose. there was a favourable balance of trade in visible items to the extent of Rs. 58 crores as compared with Rs. 92 crores in 1936-37, the balance of remittances of funds being minus Rs. 84 crores as against minus Rs. 71 crores in the preceding year. The following table shows in detail the position of India's balance of trade on preseparation as well as post-separation basis. The invisible items that enter into India's balance of accounts, such as shipping services, private remittances and exports and imports of capital, insurances, tourists' expenditure, etc., are not included in the table as these cannot be

Note.—The sign + means net exports and the sign — net imports.

(a) Exclusive of the value of railway materials imported direct by State Railways working under company management, which was not paid for in the ordinary way and was not, therefore, taken into account in arriving at the balance of trade.

⁽b) I relusive of figures for Burma for which separate statistics are not available,

II-IMPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles imported into British India:—

NOTE—Consequent upon the separation of Burma the foreign trade statistics of British India for 1937-38 include the trade of British India with Burma but exclude the trade of Burma with foreign countries other than British India. Direct comparison with the figures recorded for the years prior 1937-38 is therefore vituated. With a view to remedying this defect attempts have been made to adjust the figures for the years 1935-36 and 1936-37 so as to afford a comparison with those for 1937-38 and the results are embodied in this Review. It should be distinctly understood that these adjustments have been carried out in so far as the available data permit and the figures for the years 1935-38 and 1936-37, thus revised, are necessarily approximate, but sufficiently accurate to provide a basis for analysing the trade in essential details.

Cotton manufactures (Rs. 18.55 lakks).— The price of raw cotton during 1937-38 showed a generally downward movement with short intervals of reaction, especially during the last quarter of the year. At the beginning of the year, the price of American Middling cotton year, the price of American Midding cotton in New York stood in the neighbourhood of 14.98 cents per lb. and after having steadily declined to its lowest point 7.84 cents on November 19, it approached 8.78 cents towards the end of March 1938. The decline in the price of the raw material had practically no effect in stimulating imports of cotton manufactures into India. Of the two principal suppliers, the United Kingdom was more active to meet home demands and outstanding orders, which, however, slackened off later in the year and in the last quarter, she was faced with heavy stocks and with the prospect of seriously restrictstocks and with the prospect of seriously restricting her output. Japan, on the other hand, whose supplies are regulated by the new Protocol of the Indo-Japanese Agreement, experienced a difficult year. There was a serious dislocation of Japanese exports in consequence of the difficulties of the yen and exchange restrictions and of the Sino-Japanese

Prices of all classes of imported cotton manufactures during the first half of the year were generally higher than in the preceding year but in consequence of the enormous crop harvested in the United States of America, these were not maintained during the latter half of the year. The total value of cotton manufactures imported into British India during 1937-38 was Rs. 151 crores, almost the same as in the preceding year. Compared with 1935-36, the value showed a drop of Rs. 3,17 lakhs or 12 per cent.

Imports of twist and yarn declined in quantity from 27 million lbs, in 1936-37 to 22 million lbs. in 1937-38 but higher prices accounted for an increase in value from Rs. 2,44 lakhs to Rs. 2,51 lacrease in value from MS. 2,44 iakins to MS. 2,51 lakhs. The average declared value of imported twist and yarn rose from 14 as, 5 p. in 1936-37 to Re. 1-2-3 in 1937-38. It is noteworthy that imports during 1937-38, which were largely concentrated on counts 31-40—the class most interest and the class most interest in the class i very much on a reduced scale, there being improvement in the relatively small group of coarser counts. On the other hand, the production of Indian yarn showed a considerable increase which was distributed over all classes. It is interesting to observe that the production of counts above No. 40, which formed over 7 per cent. of the total Indian production in 1937-38 as against nearly 6 per cent. in the preceding year, rose from 62 million lbs. to 85 million lbs., the increase being attributed to have a superstantial of Egyptian African and larger importations of Egyptian, African and American cotton. Of the total imports, the United Kingdom supplied 30 per cent. and Japan 67 per cent, as compared with 27 per cent, and 55 per cent, respectively in the preceding year. Unsettled China was practically out of the

as against Rs. 11,95 lakhs in 1986-87, thus showing a decrease of 2 per cent. The decline was in grey goods, while white and coloured goods showed increases. Both the United Kingdom and Japan suffered considerable losses in grey goods, but, while Japan improved her supplies of both white and coloured goods, there were larger consignments of only coloured goods from the United Kingdom. iarger consignments of only coloured goods from the United Kingdom. Expressed in percentages, imports from the United Kingdom of grey goods declined as compared with 1936-37 by 55 per cent., the corresponding decrease in the case of Japan being 46 per cent. In the case of white goods which are largely of United Kingdom origin, the United Kingdom lost 12 per cent., while Japan increased her supplies by 48 per cent. Under coloured goods, imports from the United Japan by 6 per cent. The following table showing the declared values per yard of grey, white and coloured goods imported from the United Kingdom and Japan during the last three years, illustrates the fact that increased price quotations for grey and white goods were largely responsible for the reduced imports from the United Kingdom. Coloured goods which cover a large varjety of specialised fabrics were not, however, affected by a rise in prices.

Silk, raw and manufactured (Rs. 2,86 lakks).—In the year under review, Japan maintained her lead in the trade both in raw slik and in slik manufactures. In all these lines there were increases in quantities and values as compared with the previous year. Imports of raw silk rose in value from Rs. 65 iakhs to Rs. 95 lakhs, to which Japan contributed Rs. 57 lakhs and China Rs. 31 lakhs as against Rs. 36 lakhs and China its, of lakins as against ine, so mains and Rs. 26 lakins, respectively, in the preceding year. Of the total imports of silk yarn amounting to 2.5 million lbs, valued at Rs. 61 lakins in 1937-38, Japan supplied 1.8 million lbs, valued at Rs. 48 lakins. The remainder came chiefly from Italy (Rs. 6½ lakins) and China (Rs. 5½ lakins). Imports of silk piecegoods advanced from 20.4 million vards valued at Rs. 78 lakins lakha). Imports of site piecegoous auvances from 20.6 million yards valued at Rs. 78 lakhs to 22.9 million yards valued at Rs. 90 lakha in 1937-38, of which Japan supplied 18.7 million yards valued at Rs. 78 lakhs. Imports from China were comparatively small and were valued at nearly Bs. 12 lakhs. Goods of silk mixed with other materials also came chiefly from Japan and to a far less extent from from Japan and, to a far less extent, from China and Germany, imports of which totalled over 7 million yards valued at Bs. 88 lakhs as compared with 6 million yards valued at Rs. 32 lakhs in 1936-87. Japan supplied 6 million yards valued at Rs. 29 lakhs during the year under review.

Artificial silk (Rs. 4,87 lakks).—The total value of the imports of artificial silk and manufactures rose from Rs. 8,71 lakhs in 1936-37 to Rs. 4,87 lakhs in 1937-38. With the exception of piecegoods made entirely of artificial silk, all the other descriptions recorded increases. Imports of artificial silk yarn amounted to 31-6 million lbs. valued at Rs. 2,06 takhs as compared with 17-6 million lbs. valued at Rs. 99 The imports of cotton piecegoods into British laks in the preceding year. Japan was, as India totalled 591 million yards in 1987-38 and usual, the principal supplier and the consignation of the preceding year, in the yalue of these imports was Rs. 11,69 laks in Imports from Italy and the United Kingdom

also showed increases and amounted to 2.8; million lbs, and 497,000 lbs. respectively. The average declared value per lb. of imports from Japan during 1937-38 was 10 as. 4 p. as compared with 8 as. 11 p. in the preceding year, corresponding figures for imports from Italy being 10 as. 11 p. for 1937-38 and 9 as. 10 p. for 1936-37. Imports of piecegoods made entirely of artificial Imports of piecegoods made entirely of artificial silk declined from 98·1 million yards with a total value of Rs. 2.27 lakhs in 1936-37 to 89·7 million yards valued at Rs. 2.18 lakhs in the year under review. About 98·7 per cent. of the total quantity imported in 1937-38 or 88·5 million yards (Rs. 2.10 lakhs) came from Japan as against 99·2 per cent. or 97·3 million yards (Rs. 2.22 lakhs) in the preceding year. The declared value per yard of imports from Japan was 88 s. 10.0 as compared with 28 as 8n Japan was 8 as, 10 p, as compared with 3 as, 8 p, in 1936-37. Imports from the United Kingdom were comparatively small being valued at nearly Rs. 6 lakhs as against Rs. 3 lakhs in 1936-37. Goods of artificial silk mixed with other materials were received in much larger quantities, the total imports amounting to 16.1 million yards valued at nearly R. 49 lakhs in 1937-38 as compared with 11.8 million yards valued at Rs. 85 lakhs in 1936-37. Here again, Japan dominated the supplies. Nearly 15 million yards (Rs. 37 lakhs) came from that source as against 10.6 million yards (Rs. 26 lakhs) in the preceding year. The remainder came mainly from the United Kingdom (Rs. 5 lakhs), Germany (Rs. 8 lakhs) and Italy (Rs. 1 lakhs). The average declared value per yard of imports from Japan was 4 as. 0 p. and of those from the United Kingdom, 12 as. 8 p. as compared with 8 as. 11 p. and 12 as. 9 p., respectively, in the preceding year.

Weel, raw and manufactured (Rs. 4.15 and it raw wool and woollen manufactures in the year under review showed a noticeable expansion and were valued at Rs. 4.15 lakhs se against Rs. 2,66 lakhs in 1936-37. Raw wool was in better demand in Indian mills, imports of which totalled over 8 million lbs, valued at Rs. 85 lakhs as compared with 7 million lbs, valued at Rs. 86 lakhs in the preceding year. Supplies from Australia and steel, the United Kingdom advanced from 3-8 million lbs, show tons and 2-1 million lbs, respectively. Imports of worsted yarn also increased from 950,000 lbs. ton 1 of million lbs, but those of knitting wool compensained almost on the level of the preceding year.

year and amounted to 1·2 million lbs. in 1987-38. In both these lines, Japan was the leading supplier, she having sent 1·5 million lbs. of worsted yarn and 821,000 lbs. of knitting wool The remainder during the year under review. came chiefly from the United Kingdom. There was an increase in the imports of woollen and worsted piecegoods which totalled 6.7 million vards (3.3 million lbs.) valued at Rs. 1.13 lakhs as against 4.9 million yards (2.5 million lbs.) valued at Rs. 77 lakhs in 1936-87. Receipts from Japan showed a considerable increase and amounted to 4.5 million yards valued at Rs. 57 Rs. 31 lakhs. Imports from the United Kingdom showed a small variation in quantity and amounted to 1-5 million yards, but higher prices accounted for an increase in value from Rs. 38 lakhs in the preceding year to Rs. 41 lakhs. Arrivals from other countries included Rs. 8 lakhs from Italy and Rs. 5 lakhs from Germany. Imports of woollen goods mixed with other materials also showed an advance ifrom 2.0 million yards valued at Rs. 27 lakhs in 1936-37 to 3.6 million yards valued at Rs. 51 lakhs in 1937-38, of which the United Kingodm supplied 2.7 million yards valued at Rs. 38 lakhs as against 1.7 million yards valued at Rs. 28 lakhs in the preceding year. Supplies from Japan, though steadily on the increase, were comparatively small, being valued at Rs. 71 lakhs in the year under review. Consignments from Italy amounting to Rs. 2 lakhs in value showed an increase while those from Germany valued at Rs. 1 lakh, remained almost stationery.

Iron & Steel (Rs. 8,21 lakks).—There is a limited demand for foreign pig fron in India and imports, mostly from the United Kingdom, amounted to nearly 1,900 tons valued at Rs. 2 lakhs in 1937-38 as compared with 1,200 tons valued at Rs. 1 lakh in 1936-37. The declared value per ton of imported pig fron was Rs. 110, the corresponding figure for the preceding year being Rs. 83. Imports of ferro-alloys rose from 1,300 tons valued at Rs. 2½ lakhs to 3,100 tons valued at Rs. 7½ lakhs. Manufactured fron and steel, excluding pig fron and old fron and steel, excluding pig fron and old fron and steel, excluding pig fron Rs. 5,25 lakhs to Rs. 8,18 lakhs in value. The declared value per ton nearly reached Rs. 224 during 1937-38 as compared with Rs. 160 during the preceding year.

The following table shows the quantities and values of the principal descriptions of iron and steel imported into British India during the last three years:—

(a) Includes 2,097 cars from Germany.

Hardware (Rs. 3.31 lakhs),-Imports increase

Mineral elle (Rs. 17.45 lakks).—The world's production of crude oil in 1937 exceeded all previous records. With the exception of production of crude on in 1907 exceeded an orevious records. With the exception of Roumania, most of the producing countries registered increases in varying proportions. The production of kerosene and motor sprit (including aviation petrol) in Burma which supplies the bulk of India's requirements was activated at 148 million regions and 44 million. supplies the bulk of india's requirements was estimated at 146 million gallons and 64 million gallons, respectively, in 1937-88 as compared with 188 million gallons and 74 million gallons, respectively, in the preceding year. An outstanding development on the supply side of the Indian oil market is the entry of Bahrein oil which is distributed in India by the organisation set up by the California Texas Oil Company. The total imports of mineral oils of all kinds rose from 407 million gallons in 1936-37 to 475 million gallons in the year under review.

Chemicals (Rs. 3.33 lakks.)—The total imports of chemicals into British India increased in value from Rs. 2,54 lakks in 1936-37 to Rs. 3,38 lakhs in 1937-38. Sodium compounds represented 48 per cent, of this total, imports of which were valued at Rs. 1,42 lakhs as compared with Rs. 1,08 lakhs in the preceding year. Imports of sodium carbonate and caustic soda, chiefly from the United Kingdom, increased from Rs. 50 lakhs and Rs. 85 lakhs to Rs. 60 lakhs and Rs. 43 lakhs, respectively; of sodium hydrosulphite from Rs. 4 lakhs to Rs. 14 lakhs, while sodium silicate showed a small decrease. Acids as a class, of which acetic and citric are

of lakhs, of zinc compounds from Rs, 81 lakhs to hardware were valued at Rs. 3,31 lakhs in Rs. 13 lakhs and magnesium compounds from 1937-36 as compared with Rs. 2,64 lakhs in Rs. 4 lakhs to Rs. 4 lakhs. Calcium compound 1936-37, showing an increase of 25 per valued at Rs. 7 lakhs showed an increase, while comb. Higher prices partly accounted for this lead compounds at Rs. 1 lakh recorded a small decrease. Of the total imports of suiphur valued at Rs. 26 lakhs in 1937-38 as compared with Rs. 20 lakhs in the preceding year, Italy supplied 65 per cent. and Japan 27 per cent. as against 37 per cent, and 35 per cent. respectively, in 1936-87. Among other chemicals, bleaching powder, copper sulphate, glycerine, alum sulphate, glycerine, alum sulphates showed increases, powder. and aluminous sulphates while naphthalene and copperas recorded a decline.

Drugs and Medicines (Rs. 2,36 lakhs).— The total value of imported drugs and medicines increased from Rs. 1,98 lakhs to Rs. 2,36 lakhs. Imports of proprietary and patent medicines were valued at Rs. 74 lakhs as compared with Rs. 64 lakhs during the preceding year. The United Kingdom accounted for Rs. 32 lakhs, Germany, for Rs. 18 lakhs and the United States of America, for Rs. 14 lakhs. There was also an increase in the imports of quinine salts which were valued at Rs. 26 lakhs as compared with Rs. 23 lakhs in 1936-37. The principal suppliers were Germany and the United Kingdom. The former increased her share from Rs. 81 lakhs to Ra. 12 lakhs, while the contribution of the latter remained almost steady at Rs. 7 lakhs, camphor came, as usual, in large quantities from Japan and Germany which supplied 812,000 lbs, and 717,000 lbs. respectively, out of a total of 1,771,000 lbs. valued at Rs. 22 lakhs.

Paper and Pastebeards (Ra. 4.15 lakks).— Imports of paper and pasteboard increased materially in quantity and much more in value. the most important, were imported to the value of Rs. 10 lakin as compared with Rs. 8 lakin in rose by 20 per cent. from 2-5 million cwis, to the preceding year. Imports of potassium 3 million cwis, the corresponding increase in compounds rose from Rs. 24 lakin to Rs. 12 value being from Rs. 25 lakin to Rs. 3,60 lakins or 59 per cent. Printing paper is always the took the largest quantity, nearly 1.8 million chief item and recorded an increase from 937,000 gallons valued at Rs. 83 lakhs and was followed owts. Valued at Rs. 81 lakhs to 1,221,000 cwts. by Bengal with 1.5 million gallons valued at twist. Valued at Rs. 1,89 lakhs. Sweden and Norway Rs. 73 lakhs their respective imports in the together supplied 277,000 cwts., as compared preceding year being 1 million gallons valued with 250,000 cwts. in 1936-37; while the supplies at Rs. 78 lakhs and 1 4 million gallons valued at from Germany, which are mainly of Scandinavian Rs. 70 lakhs. Sind and Madras also increased origin, amounted to 391,000 cwts. as against their requirements to Rs. 464 lakhs and Rs. 27
408,000 cwts. in the preceding year. Imports lakhs, respectively. Over 75 per cent. of the from Austria showed a marked expansion, having total quantity of imported liquors consisted of from Austria showed a marked expansion, having total quantity of imported liquors consisted of amounted to 192,000 cwts, as compared with 29,000 cwts, in the preceding year. Arrivals from the United Kingdom and Japan also from 3.4 million gallons valued at Rs. 69 lakhs increased to 53,000 cwts, and 25,000 cwts, respectively. Imports of writing paper and envelopes rose from 146,000 cwts, valued at Rs. 75 lakhs in 1936-37 to 179,000 cwts, valued at Rs. 32 lakhs in 1936-37 to 179,000 cwts, valued at Rs. 48 lakhs in 1937-38 and, similarly, packing for the United Kingdom. Sweden, Germany and Morway increased from Sweden, Germany and Japan. Spirits accounted the sum of the sum newspapers in bales and bags, chiefly from the United Kingdom, also increased from 956,000 cwts, to 976,000 cwts, in quantity and from Rs, 34 lakhs to Rs, 47 lakhs in value. The value of paper manufactures imported mainly from the United Kingdom, also rose from Rs. 16 lakhs to Rs. 20 lakhs.

Sait (Rs. 56 lakhs).—Leaving out Burma, which no longer forms a part of India the consumption of foreign salt is practically limited to Bengal. Imports of salt rose from 300,000 tons valued at Rs. 45 lakhs to 347,000 tons valued at Rs. 56 lakhs in 1987-88. The trade was practically divided between Aden and Germany in to Rs. 20 lakhs.

Liquers (Rs. 2,30 lakhs).—The total imports of liquors rose from 4.5 million gallons valued at Rs. 2,16 lakhs in 1936-37 to nearly 5 million gallons valued at Rs. 2,30 lakhs in the year under review. All the descriptions including the more expensive liquors, such as wines, amounted to 1,402,000 tons as against 230,000 brandy and liqueurs, showed increases. Hombay tons in the preceding year.

Tea (Rs. 24.39 lable).—The world demand million lbs. and those to the Soviet Union for tea during 1987 was slightly better than in declined from 5 million lbs. to 4 million lbs. the preceding year. For 1937-38, the export Germany took 6 million lbs. in 1987 as against quota under the International Agreement was 4 million lbs. In the year preceding. Re-exports raised to 871 per cent. of the standard exports.
Of the total exports of 834 million lbs. in 1937-38,
shipments to the United Kingdom amounted to 288 million lbs.; in the preceding year, the United Kingdom took a little over 256 million lbs, out of a total of 806 million lbs. The Irish Free State required 8 million lbs. or over 1 million lbs, more than in the preceding year. birect exports to Canada remained fairly steady at 15 million lbs., while those to the United States of America declined from nearly 8 million lbs. to 6 million lbs. Exports to Arabia and Iraq were smaller than in the preceding year and amounted to 375,000 lbs. and 42,000 lbs., re-pectively. Exports to Iran showed a consider-able decrease and amounted to 4 million lbs. as against 11 million lbs. in the preceding year. There were also smaller shipments to Australia, Egypt and the Bahrein Islands, while those to egypt and the Bahrein Islands, while those to Ceylon and New Zealand showed increases. The share of Calcutta in the total exports of tea in 1937-38 was 61 per cent, and of Chittagong 24 per cent, the remainder being shipped almost entirely from Madras, Shipments from Calcutta amounted to 204 million ibs. and from Chittagong 79 million ibs., while exports from Madras totalled 51 million ibs. in 1937-38.

The exports of Indian tea from the United Kingdom in 1987 totalled 35 million lbs. as in the receding year, the corresponding figure for 1985 eing 88 million ibs. Re-exports to the Irish Free State advanced from 13 million lbs. to 14 with 740,000 tons in the preceding year.

4 million lbs. in the year preceding. Re-exports to the United States of America and Canada, however, remained steady at 5 million lbs. and 1.5 million lbs., respectively.

Oileceds (Rs. 14,16 lakhs.)—The total exports of oileceds declined by 18 per cent. in quantity and 24 per cent, in value and amounted quantity and 2s per cent, in value and amounts of 950,000 tons valued at Rs. 14,16 lakhs as compared with 1,161,000 tons valued at Rs. 18,57 compared with 1,161,000 tons valued at Rs. 18,57 recorded decreases, this being partly attributed to the increased internal consumption. Linseed to the increased internal consumption. Linseed to the increase where the partly decreased the second consumption. and groundnuts in recent years have figured largely in the Indian export trade, while cotton largely in the Indian export trade, while obton seed, rapeseed and sesamum have lost their former importance. The Indian Linseed crop of the season 1936-87, which was mostly marketed in the year under review, was estimated at 420,000 tons as against 388,000 tons in the preceding season. Shipments from India fell by 23 per cent. in quantity from 296,000 tons in 1938-87 to 227,000 tons in 1937-38 and by 18 per cent. in value from Ra. 4,36 lakhs to Ea. 3,57 lakhs. Exports to the United Kingdom were on a reduced scale and amounted to 175,000 tons as against 218,000 tons in the preceding wear. as against 218,000 tons in the preceding year.
Continental countries, with the exception of
Belgium, Rely and Greece took less and their
total purchases aggragated 22,000 tons or s decrease of 14,000 tons over the preceding year

Exports of groundsute during the year under review amounted to 619,000 tons as compared

value of the exports also fell from Rs. 12.30 laiths | ibs. to \$1 million lbs. and those to the United in 1936-37 to Rs. 8,93 lakhs in 1937-38. Exports | States of America from 9 million lbs. to 5 million of rapesced declined to 32,000 tons valued at Rs. 46 lakhs from 38,000 tons valued at Rs. 54 lakhs in 1936-37. Shipments to the United Kingdom, however, improved from 15,000 tons to 16,000 tons, but those to France declined from 7,000 tons to \$,000 tons. Exports of castor seed declined slightly in quantity from 43,000 tons in 1936-37 to 42,000 tons in 1937-38, but rose in value from Rs. 63 lakhs to Rs. 64 lakhs.

Hides and Skins (Rs. 11,39 lakes.)—Exports of raw hides and skins increased by 10 per cent. In quantity from 37,500 tons in 1936-87 to 41,300 tons in 1937-38 and by 18 per cent. in value from Rs. 4,19 lakhs to Rs. 4,94 lakhs. Raw hides represented 52 per cent. of the total quantity of raw hides and skins exported in 1937-38 and recorded an increase from 18,600 1,17 lakhs to \$1,600 tons valued at Rs. tons valued at Rs. 1,57 lakhs. Shipments in the year under review consisted of 16,800 tons of raw cow hides, 4,400 tons of buffalo hides and 450 tons of calf skins which are classified under raw hides.

ibs. Beigium which had taken 2 million lbs. in 1936-37 was practically out of the market in the year under review.

Motals and Ove (Rs. 6.13 lable).—With the separation of Burms, India is no longer interested in the exports of wolfram ore, in ore, pig lead and speiter, as these are almost entirely alipped from Burms. The total exports of metals and ores amounted to 1,908,000 tons valued at Rs. 6,13 lakhs as compared with 1,450,000 tons valued at Rs. 8,69 lakhs in 1936-37. Manganese ore represented \$8 per cent. of the total quantity exported in 1937-38 and showed a remarkable expansion as a result of increased activity of the steel industry throughout the world. Exports of manganese ore advanced from 677,000 tons to 1,001,000 tons or an increase of 48 per cent. as compared with the preceding year. The United Kingdom was, as usual, the largest purchaser and took 284,000 tons as against 216,000 tons in 1986-37.

Lac (Rs. 1,62 Lahla.)—The total shipments of shellac amounted to 409,000 cwts, as compared Raw Weel (Rs. 2.55 lakks).—The trade in Hards in United Kingdom totalized 105.000 cwts. as compared in business particularly during the latter part of 15.000 cwts. in 1936-37. Exports of the year under review. Exports of raw wood 5 tates of America and Japan also reduced their from India amounted to 38 million lbs. valued at purchases from 15.000 cwts, and 37,000 cwts. Rs. 2.65 lakks as compared with 52 million lbs. valued at Rs. 2,86 lakhs in 1936-37. Shipments while Germany slightly increased her require-to the United Kingdom declined from 39 million ments from 49,500 cwts. to 49,800 cwts.

Other Articles.-The following is a summary of the course of trade in the more important of the remaining articles of export :--

1987					102	106	108
1988					95	101	104

About the end of the year 1929 there began a sharp decline in wholesale prices which continued during 1980 and 1981. During 1982, wholesale prices showed a tendency to decline and in 1933 they definitely registered a fall, reaching their lowest level. This downward trend was some-what checked in 1934. The next two years what appreciable improvement in prices at Karachi which was more than maintained The catastrophic fall in prices which during the year 1937, but it was not till 1937 commenced at the end of 1929 continued also that the position showed definite improvement during 1931 although with less vigour than in 1931 although with less vigour than 1931 although wi in Calcutta and Bombay.

The various Provincial Governments publish in their respective Gassies fortnightly and monthly statements of retail and wholesale prices of certain important commodities. to these, however, some of the Provincial Governments also publish working class cost of living index numbers. Such index numbers are being published regularly every month for the following centres: for Bombay, Ahmedabad, and Sholapur by the Labour Office of the Government of Bombay; for Nagpur and Jubbulpore by the Department of Industries, Central Provinces and Berar; for aix centres in Bihar by the Department of Industries. Bihar and for Rangoon by the Industries, Labour Commissioner, Burma, Rangoon.

The working class cost of living index number for Bombay, which was hitherto compiled on a pre-war base, was revised during 1987, the base adopted for the new series being July 1938 to June 1984—100. The revised index number 1988 being 106. index number with base August 1926 to July 1927-100 stood at 72 in December 1938 while 1937-100 stood at 72 in December 1938 while retail prices they recommend that the data the Sholapur cost of living index number with should be compiled for India as a whole, and me base February 1927 to January 1928-100 stood for separate provinces, and that they should at 74 in December 1938. The Nagpur cost of not be initiated till certain preliminary steps 4 living index number on base January 1927-100 improvement of the data suggested by the was 61 in December 1938 while the Jubbul-

pore Index on the same base was 57. For Rangoon, four different index numbers with base 1981-100 are compiled for (a) Burmese, (b) Tamils, Telugus and Oriyas, (c) Hindu-stanis and (d) Chittagonians. The Index stanis and (d) Chittagonians. The Index Numbers in December 1938 for these were 85. 90, 88 and 87 respectively.

1930. In 1932 prices ruled at a slightly lower level than in 1931. In 1938 and 1934 the downward tendency of prices continued.

The inadequacy as also the general unrelia bility of Indian price statistics has been the subject of comment by many committees and commissions of enquiry and the majority of the Indian Economic Enquiry Committee of 1921 made many suggestions for the improvement of price statistics and advocated the passing o Census and Statistics Act. This latter suggest This latter sugges by the White was also endorsed Commission on Indian Labour and the Govern ment of India have already taken up the recommendation which is under their cen sideration. Messrs. Bowley and Robertson wh were invited by the Government of India t advise them on the question of obtaining mor accurate and detailed statistics have also mad or nombey, which was mesers or opposed on a pre-war base, was revised during 1987, the certain recommendations for improving India base adopted for the new series being July 1983 price statistics. As regards the General Inde to June 1984—100. The revised index number of wholesale prices in India theorem is the statistics of the prices in India theorem is the statistics of the prices in India theorem is the statistics of the statistics. As regards the General Inde to the statistics of the General Inde to the statistics of the grant of the grant of the statistics of the grant of England. With regard to index numbers

The Indian Stores Department.

Indian Stores Department at Government of India headquarters and of the successive orders issued by Government to assure as far as possible the purchase of stores of Indian manufacture or in India is to be found in earlier issues of the "Indian Year Book." The current rules to regulate stores purchase prescribe that preference in making purchases shall be given in the following order :-

First, to articles which are produced in India in the form of raw materials or are manufactured in India from raw materials produced in India, provided that the quality is sufficiently good for the purpose;

Second, to articles wholly or partially manufactured in India from imported materials, provided that the quality is sufficiently good for the purpose :

Third, to articles of foreign manufacture held in stock in India provided that they are of suitable type and requisite quality :

Fourth, to articles manufactured abroad which need to be specially imported.

The record of the activities of the Indian Stores Department for the year 1937-88 shows a further marked advance over the corresponding figures for the preceding year. The turnover of every branch of the Department exceeded the highest previous record, which result is the more gratifying as it has been achieved in the first year of the Constitutional Reforms in India. It is notworthy that the purchases on behalf of the Autonomous Provinces amounted to Rs. 82,09,244, exceeding the corresponding figure for 1936-37 by Rs. 11,67,884, in spite of the fact that purchases for authorities in Burma have been accounted for separately from the 1st April 1987.

The revised rules for the supply of articles required to be purchased for the public service, which make it obligatory on all purchasing departments to obtain their requirements of stores (with certain exceptions) on condition that they are delivered and paid for in rupes in India, were in force in all Government of India Departments and in all Government Provinces except the Punjab. The Punjab Government had the revising Purchase Eules under consideration.

The services of the Stores Department are also utilized by the Resident Engineer, Royal (6) To assist in a Airship base, Karachi, for the purchase and exhibitions in Indis.

A detailed account of the organisation of the inspection of miscellaneous stores, by the inspection of misocitaneous stores, by the Inspector General, Folice, Singapore, for uniforms and accountrements. The Colonial Store Keeper, Ceylon, the Union of South Africa, the Paistine Government and the Singapore Municipality are other authorities which also availed themselves of its services.

The cost of the operations of the Department connected with the purchase and inspection of stores and the fees earned on these operations showed for the year 1937-38 a net defict of Rs. 2,59,355. The total direct and indirect expenditure upon the department in 1937-38 amounted to Hs.26,73,591.

There were 867 sanctioned posts in the department at the end of 1837-88, 71 of these being held by gasteted officers. The number of European and Indian officers on 31 March 1938 stood at 18 and 52 respectively against 21 and 50 on the same date in the preceding

The Department constantly labours to seeks manufacturers in India to improve the quality of their products, affording them technical of their products, affording them technical advice and suggestions in the course of purchase and inspection. The Department makes every endeavour to substitute supplies of indigenous manufacture, wherever possible, without sacrifice of economy and efficiency, for supplies from

The Department has an Industrial Intelligence and Research Bearcan attached to it. the principal functions of which are;

- (1) The collection and dissemination of industrial intelligence;
